Release at a glance

01 / 06

0 Issues closed Unique completed issue closures in-window with delivered source	3 Features added Top-level Added entries in CHANGELOG 3.25.6	2 Changed entries Top-level Changed entries in CHANGELOG 3.25.6	3 Fix entries Top-level Fixed entries in CHANGELOG 3.25.6
34m 12s Gate green to published Green gate receipt at 12:46:50Z to publication at 13:21:02Z	2 / 2 Install proofs Apple Silicon macOS and clean Linux jobs passed on the published commit		

The closure window is strictly after the v3.25.5 publication at 2026-09-11T22:36:34Z and inclusive of the v3.25.6 publication at 2026-09-15T13:21:02Z. GitHub issue search results were filtered to non-PR issues and exact closed_at timestamps, then checked against the delivered tag diff. The only issue closed in-window was #870, with state_reason=not_planned; no issue qualifies as a completed closure with delivered source. The 144-second tag-to-published interval (13:18:38Z to 13:21:02Z) is a separate measurement, not the gate-green interval above.

▼ Change map · data and reading guide

Each filled dot would represent one issue that GitHub closed as completed and whose fix is present in the published source. No issue met both tests in this edition; the zeroes below describe closure evidence, not the amount or value of shipped work.

Change map data · closed issues by surface

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
---------	---------------	---------------

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
Checks	0	Proof and close improvements shipped; no matching completed closure was verified in-window
Release	0	Receipt improvements shipped; no matching completed closure was verified in-window
Factory	0	Status and cleanup improvements shipped; no matching completed closure was verified in-window
Hub	0	No Hub-only completed closure was verified; this is not a measure of shipped change
Total	0	No verified completed closures

The surface order follows the latest published report. The issue search found one non-PR closure in the exact window, #870, marked not_planned; it has no delivered-source reference and is not counted. Open issues and changelog entries are not closures. See the [GitHub comparison from v3.25.5 to the published source \(https://github.com/Richards-LLC/cassy/compare/v3.25.5...a87153be8f2bcdbe0745fc18a5a062264e9e5a1d\)](https://github.com/Richards-LLC/cassy/compare/v3.25.5...a87153be8f2bcdbe0745fc18a5a062264e9e5a1d) and the [closure-window search \(https://github.com/Richards-LLC/cassy/issues?q=is%3Aissue+is%3Aclosed+closed%3A2026-09-11..2026-09-15\)](https://github.com/Richards-LLC/cassy/issues?q=is%3Aissue+is%3Aclosed+closed%3A2026-09-11..2026-09-15).

What you can do now

02 / 06

Keep skills tidy

Understand expected Codex copies

WAS expected Codex skill copies could look like conflicting duplicates.

NOW cas doctor distinguishes intentional Codex twins from stale Cassy-managed copies and explains which cleanup is safe.

Preserve skills you own

WAS stale managed entries and user-created skill directories could receive the same cleanup advice.

NOW remedies reflect ownership; uncertain or user-owned content is left alone.

See work accurately

Trust worker status

WAS an active Codex worker could appear dead, and a real exit could lose its result.

NOW status uses process identity and the Git worktree root, and shows available exit details with a bounded terminal excerpt.

Clean up with confidence

Keep unrelated workspace data safe

WAS a directory name or Git relationship could make a user-created target look disposable.

NOW Cassy rechecks durable ownership before reclamation and preserves active, recent, replaced, or uncertain targets.

Under the hood

03 / 06

Delivery and proof

Close and platform evidence

WAS ambiguous pass notes or stale branches could satisfy a release check.

NOW bounded typed proof, delivered-content identity, and target-branch reachability must agree, including after request changes and across repositories.

Process and repository identity

WAS a live Codex process could be classified as dead, worktree paths could resolve differently, and EOF could hide a later exit code.

NOW validated process evidence and Git toplevel resolution are used; nonblocking reads retain eventual exit status and bounded PTY-tail evidence without inventing missing details.

Safer execution and cleanup

Credential isolation

WAS factory launches could inherit protected machine-global operator values.

NOW protected names are removed unless an explicit task-scoped or project-scoped grant authorizes them; provider authentication remains available.

Owned-target reclamation

WAS branch naming and repository membership could be mistaken for Cassy ownership.

NOW discovery uses durable ownership evidence and cleanup revalidates it, refusing uncertain or replaced targets.

Complete receipts and durable updates

PDF integrity

WAS an upload acknowledgement could stand in for proof of the stored document.

NOW size, SHA-256, PDF decoding, and page-count checks must match; the authenticated hub-read fallback is bounded from the user-thread root.

Concurrent notes and observations

WAS concurrent note appends could overwrite one another and hook observations could lose their originating session.

NOW appends are serialized and outcomes remain bound to their harness session.

macOS ARM64	cas-aarch64-apple-darwin.tar.gz (https://github.com/Richards-LLC/cassy/releases/download/v3.25.6/cas-aarch64-apple-darwin.tar.gz)	6c7a147bd7740de1a531c5477e2f680b503fb660cfbc02aeb3a7ebc440805af2

Evidence and scope

Change map data · closed issues by surface

EVIDENCE	RECORD
Published source	<code>`a87153be`</code> (https://github.com/Richards-LLC/cassy/commit/a87153be8f2bcdbe0745fc18a5a062264e9e5a1d), tag <code>`v3.25.6`</code> (https://github.com/Richards-LLC/cassy/releases/tag/v3.25.6); 55 commits after v3.25.5
Release workflow	Run 34974174866 (https://github.com/Richards-LLC/cassy/actions/runs/34974174866) completed successfully on the published source

EVIDENCE	RECORD
Full gate	gate.done=0, full-gate SHA f0a4292c5108e92718100b6650764999935f4f89; gate green epoch 12:46:50Z. Its source tree matches the published commit.
Publication	Release receipt: 2026-09-15T13:21:02Z; tag pushed 13:18:38Z; tag-to-published 144 seconds. Fresh-download hashes match the <u>GitHub release asset digests</u> (https://github.com/Richards-LLC/cassy/releases/tag/v3.25.6).
Install verification	<u>Workflow 34974429049</u> (https://github.com/Richards-LLC/cassy/actions/runs/34974429049), <u>workflow-dispatch</u> on the exact published SHA; <u>Apple Silicon macOS</u> (https://github.com/Richards-LLC/cassy/actions/runs/34974429049/job/104398461707) and <u>clean</u> <u>Linux</u> (https://github.com/Richards-LLC/cassy/actions/runs/34974429049/job/104398461929) jobs passed.
Issue snapshot	<u>GitHub issue search</u> (https://github.com/Richards-LLC/cassy/issues?q=is%3Aissue+is%3Aclosed+closed%3A2026-09-11..2026-09-15), retrieved 2026-09-15 around 13:36 UTC; exact timestamps were compared with the publication window. #870 is not_planned; it is excluded.
Open references	The 14 release-referenced candidates queried were open at retrieval. In particular, <u>#854</u> (https://github.com/Richards-LLC/cassy/issues/854) remains unresolved. <u>#869</u> (https://github.com/Richards-LLC/cassy/issues/869) is open, and cursor commit e9ae7c89 is not an ancestor of the published source.

The published change log has three Added, two Changed, and three Fixed entries. These describe delivered changes, not completed issue closures. No claim is made that #854 or the cursor flow is fixed. Install automation passed on Apple Silicon macOS and clean Linux; this does not claim a manual consumer-GUI or Gatekeeper check. No local host refresh, PDF upload, or Slack post is evidenced here. The closure count is a point-in-time GitHub snapshot, not a guarantee about later issue state. The generated PDF is not tagged; PDF screen-reader behavior was not tested.
