Cassy v3.76.0 RELEASE REPORT · PUBLISHED 23 OCTOBER 2026 · 1:43 PM CT

# Cassy recognizes merged work and keeps valid proof.

| AREA | CHANGES |
|---|---|
| Sessions | 3 |
| Tasks | 7 |
| Releases | 2 |

12 changes shipped across 3 areas; Tasks has the most, 7.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

## Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.76.0 CHANGELOG. Dots count changes, not their size or importance.

| AREA | CHANGES | WHAT CHANGED |
|---|---|---|
| Sessions | 3 | Detached checkout guard; Terminal sizes across viewers; macOS lane checks |
| Tasks | 7 | Own branch per task; Squash re-close after a rejection; Adopting an already merged delivery; QA proof survives documentation commits; Review checkout durability; Worktree document status; Priority refusal wording |
| Releases | 2 | Release report credentials; Durable report links |
| Total | 12 | 3 areas |

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-23-v3.76.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.76.0; retrieved 23 October 2026 · 1:46 PM CT.

**12**

**Changes shipped**

1 changed, 11 fixed; tests and docs not counted

**13m 56s**

**Green to published**

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.76.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1354 or the CHANGELOG section references it and it closed between the PR opening (1:04 PM CT) and 15 minutes after its merge (1:44 PM CT). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

# What you can do now

## Everyday screens and commands

### Terminal sizes across viewers

WAS

Taking over a shared screen by typing kept the old size, and a narrow second terminal showed nothing.

NOW

The screen follows whoever is typing, and a narrow terminal gets its compact view.

### Document status in worktrees

WAS

Map and overview status checks read the main checkout, so documents updated in another checkout looked missing or stale.

NOW

They read the checkout you run them from.

### Detached checkout guard

WAS

Stepping through history with bisect and a detached checkout was refused as if it were a commit.

NOW

It runs, and commits on a detached checkout are still refused, including a disguised file-restore form.

### Priority refusal wording

WAS

Changing a task's priority without a signed-in session gave an unrelated message about receipts.

NOW

The message says the priority change was refused and why.

## Delivery and recovery

### Own branch per task

WAS

Starting a task could reuse another task's branch and mix up its merge and close.

NOW

Cassy refuses and prints the exact commands that create the task's own branch.

### Squash re-close after a rejection

WAS

Re-closing squash-merged work after a review rejection looped between two refusals that each pointed at the other.

NOW

The squash receipt closes it, and staging uses the remote branch instead of a stale local copy.

### Adopting already merged work

WAS

Picking up merged work after a restart needed a manual branch reset.

NOW

It is adopted directly, and a checkout carrying unrelated unmerged work is refused before anything changes.

### Proof survives documentation commits

WAS

A docs-only or checklist-only commit after browser checks forced a full browser rerun.

NOW

The existing proof is reused and noted, while product changes, or checklist edits that change which checks apply, still need a rerun.

### Review checkout durability

WAS

A power loss right after a review copy was created could drop it and leave stale records.

NOW

The new copy is saved to disk before work continues.

## Build and release tools

### macOS slow-call checks

WAS

On macOS, process lookups slipped past the check for slow calls in Cassy's background service.

NOW

They are caught on macOS as they already were on Linux.

### Release report sign-in

WAS

Posting a release report failed when the Slack token was set up only in Codex, or under a name other tools accept.

NOW

Codex's setup is read, every accepted name works, and a refusal names the file and the fix.

### Durable report links

WAS

A release report could link to a temporary branch or an unchecked hand-typed address that later broke.

NOW

Only main or the release tag is accepted, checked before the report is uploaded.

# Under the hood

## Everyday commands

### Terminal sizes across viewers

WAS

Typing took input ownership without a resize, and non-owner Resize events were dropped, so narrow viewers never got a compact target.

NOW

An ownership change feeds the recorded size through the debounced resize path, every client's size is kept and the full layout follows the owner.

### Worktree document status

WAS

cas codemap status, overview status and the close drift checks resolved CODEMAP and PRODUCT_OVERVIEW from the CAS_ROOT parent checkout.

NOW

They read the calling checkout when level with or ahead of its target; behind or divergent checkouts keep the target snapshot.

### Detached checkout guard

WAS

The worker commit guard treated checkout as a history write, refusing bisect plus checkout --detach, and matched --detach after a -- separator.

NOW

Isolated detached checkout skips the branch check, option scanning stops at --, and detached commits stay refused.

### Priority refusal wording

WAS

An unregistered priority update returned "Receipt submission requires an already registered authenticated Cassy session".

NOW

It returns TASK PRIORITY UPDATE REJECTED with the registration reason, and blocked→open+P0 and closed→open+P0 rows are tested.

## Delivery and recovery

### Own branch per task

WAS

task start reset and reused factory/<worker>-cas-<old> for a different task, breaking worktree_merge and close attribution.

NOW

Start refuses with the exact fetch, switch and push remedy unless rebind_branch recorded that branch, and cas-worker requires whole-module proof.

### Squash re-close after a rejection

WAS

After a verifier rejection, PARK REFUSED named the source tip, MERGE REQUIRED named the squash, and merged_into resolved stale local refs.

NOW

PARK recognizes target-reachable exact squash equivalence without moving source anchors, and merged_into prefers origin/<branch>.

### Adopting already merged work

WAS

transfer adopt_branch refused a receiver HEAD descending from the delivery tip ("cannot fast-forward"), forcing git reset --hard.

NOW

HEAD is kept when it contains the tip and is target-contained; unintegrated descendants refuse before assignment, lease or HEAD change.

### Proof survives documentation commits

WAS

Any commit after the QA trace tip, even journeys.yaml bug metadata or a ledger row, made close demand a browser replay.

NOW

Non-product diffs with unchanged qa_impact selection rebind the trace with an A/B/paths note; selection, status or invariant changes refuse by name.

### Review checkout durability

WAS

Fresh review checkout creation did not fsync the scratch-store parent directory.

NOW

The parent is synced after owner publication and before git worktree add, and a sync failure propagates.

## Build and release tools

### macOS lane checks

WAS

read_pid_starttime called libproc without a lane-guard note, so Proc enforcement never fired on macOS and flv2_no_blocking_call_on_lanes failed.

NOW

It notes BlockingKind::Proc before the syscall, and the test uses a real macOS PID fingerprint.

### Release report credentials

WAS

release-report-post.py read only .claude.json and refused Codex selector names outside VIOLET_SLACK_TOKEN_*.

NOW

It reads bearer_token_env_var and env_http_headers from CODEX_HOME/config.toml, accepts CLI-valid names and fails closed on conflicts naming VIOLET_SLACK_TOKEN_ENV.

### Durable report links

WAS

Generated refs could point at a delivery branch, and a manual CAS_RELEASE_TRAIN_REPORT_HTML_URL skipped the ref check.

NOW

Both must name main or the release tag without . or .. segments, refused before the PDF upload.

## Evidence and scope

Sources retrieved 23 October 2026, 1:46 PM CT: CHANGELOG (https://github.com/Richards-LLC/cassy/blob/v3.76.0/CHANGELOG.md), the release draft (https://github.com/Richards-LLC/cassy/blob/v3.76.0/docs/release-notes/2026-10-23-v3.76.0-slack.md), and GitHub release v3.76.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.76.0). PR #1354 (https://github.com/Richards-LLC/cassy/pull/1354) opened at 1:04:52 PM CT and merged at 1:29:56 PM CT (25m 04s); publication completed at 1:43:38 PM CT, 13m 42s after the merge.

Changes are grouped by title, then text. Moved by hand: Worktree document status and Priority refusal wording to Tasks (close checks and task updates), and Durable report links to Releases. Counts describe changes, not impact.

Merge-queue green (1:29:42 PM CT) to publication took 836 seconds, over the 600-second budget; the overrun is recorded and the live release was not held. Per-stage timings are unavailable. Published archives were downloaded fresh and matched GitHub's SHA-256 metadata before entering the draft; 3.76.0 is installed on the release host through `cas update`. No source warnings.
