cas-src v3.77.0 RELEASE REPORT · PUBLISHED 23 OCTOBER 2026 · 8:54 PM ET

Cassy recognizes the work and keeps it moving.

AREA	CHANGES
Sessions	3
Tasks	7

10 changes shipped across 2 areas; Tasks has the most, 7.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.77.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	3	Spawn base checked before queueing; Supervisor reminders during background work; macOS provisioning test and a timing flake
Tasks	7	Second task beside a parked delivery; Rebinding a rewritten delivery; Re-close after a target sync; Closing merged work after branch cleanup; Recovery-suffix branches; QA claims on release and shutdown; QA rebind compares full coverage
Total	10	2 areas

10

Changes shipped

10 fixed; tests and docs not counted

5m 25s

Green to published

Within budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.77.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1360 or the CHANGELOG section references it and it closed between the PR opening (8:06 PM ET) and 15 minutes after its merge (9:04 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. The merge queue ejected the release PR once on a stale test; a test-only repair landed and the rerun passed. No other stage was blocked or needed manual intervention. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

Starting and delivering work

Adding help from an out-of-date copy

WAS

Asking for another assistant while your copy had drifted from the shared one said "queued", then failed out of sight.

NOW

It is refused at once with the command that fixes the copy, and any later start failure is reported straight away.

A second task while the first waits

WAS

Starting a new task while earlier work waited to merge could move that work's branch and suggest a push that would overwrite it.

NOW

The new task gets its own branch, the waiting work stays put, and its backup copy can be saved.

Moving work onto a corrected base

WAS

After work moved onto a corrected starting point, Cassy said the branch held nothing to deliver, forcing a redo.

NOW

It recognizes the task's own commits and records where the work used to be, while empty or unrelated branches are still refused.

Closing again after bringing in the latest changes

WAS

Closing again after merging in the latest shared changes reviewed the old version, then blamed history that was fine.

NOW

The new version is the one reviewed and merged, and work that is already merged keeps its original record.

Closing merged work after branch cleanup

WAS

Once merged work's branch was deleted, closing it was refused until someone pushed the branch again.

NOW

It closes from the merged copy, while work that never merged is still refused.

Restarting on a recovery branch

WAS

Restarting a task on its own recovery branch could be refused as if it belonged to a different task.

NOW

It is recognized as the task's own.

Reviews and reminders

Abandoned reviews

WAS

When a reviewer let go of a review or shut down, the review stayed locked to them until its deadline.

NOW

It is freed at once for someone else, a reviewer can free only their own review, and one who is still active keeps it.

Reused review proof

WAS

An edit raising how much evidence a check needs could still let older proof count.

NOW

Older proof is reused only when every requirement is unchanged, and Cassy names what changed.

Timed reminders during background work

WAS

A timed reminder could sit unseen for up to two minutes while a background job kept the screen busy.

NOW

It is delivered as soon as the current turn has clearly ended, and never typed into a turn still running.

Build and test reliability

Mac test reliability

WAS

One of Cassy's own checks failed on every Mac run, and another failed now and then on a busy machine.

NOW

Both pass reliably, and the first again covers the real start-up path.

03 / 06

Under the hood

Spawn and start

Spawn base preflight

WAS

spawn_workers answered "Queued ... NOT YET CONFIRMED" for a base diverged from origin, and the provision failure arrived as a Normal row at the next turn.

NOW

A diverged base is refused synchronously with the rebase --autostash remedy, and provision/register failures are Critical blocker notices that wake an idle supervisor.

Second task beside a parked delivery

WAS

task start reset factory/<worker> under a parked delivery, close pointed at that branch's push, and the push guard refused the per-task archive ref.

NOW

Start leaves the parked branch alone, close measures the task branch with start-base checks, and the hook admits a same-name archive ref but not HEAD:<other-task>.

Recovery-suffix branches

WAS

factory/<w>-<task>-reviewed parsed as owned by a task named <task>-reviewed, so a restart after the rebind record cleared was refused.

NOW

An owner equal to the task ID or prefixed by "<task-id>-" is the task's own, and foreign per-task branches still refuse.

Delivery recovery

rebind_branch after rewritten history

WAS

rebind_branch refused rewritten anchors, resets onto origin/<target> and distinct per-task branches with "replacement has no unmerged task delivery".

NOW

It attributes commits via the validated common root, derives the base from the target even on the same branch, audits the old start/base/anchor/tip, and still refuses empty or foreign ranges.

Re-park at a target-sync tip

WAS

close with commit_receipt=C kept the obsolete anchor B and dispatched QA for B, and a later close claimed the start base was not an ancestor of C.

NOW

An attributable fast-forward target-sync tip advances the anchor and QA round, a target-reachable tip keeps B even if the content probe is Unknown, and rewrites that drop B refuse truthfully.

Merged close after source cleanup

WAS

close of a merged AwaitingMerge task refused PARK REFUSED "pushed source at None" once the worker branch was deleted from origin.

NOW

A target-merged anchor keeps the content/verification decision instead of re-parking, and an unmerged anchor still refuses.

QA

QA pass claims

WAS

Releasing the QA task or shutting down the reviewer left the pass claimed until its deadline, blocking replacement starts and qa_request.

NOW

Release returns the pass to Pending (workers drop only their own claim), a claim error warns while Cloud/file-lease cleanup completes, and shutdown/unregister clear stale claims.

QA trace rebind coverage

WAS

The non-product rebind check compared journey status and invariants only, so a registry edit raising evidence_required reused an old trace.

NOW

It also compares kind, evidence_required and the registry safety policy, and the refusal names the journeys and whether the policy changed.

Wake delivery

Self-reminders during background tasks

WAS

A Claude supervisor's fired self-reminder needed 2 s of PTY silence, so background-task repaints parked it for 120 s until an unrelated turn.

NOW

A turn completion recorded after the last turn start lets it inject once without the silence bar, and the composer, readiness and in-flight vetoes stay.

Tests

macOS provisioning and single-turn flake

WAS

provisioning_dispatch_test compared a raw /var tempdir with /private/var and bypassed launch(), and the supervisor single-turn test slept a fixed 200 ms and 5.1 s.

NOW

Both sides are canonicalized through a hidden typed-launch hook with the build-hash check, and the test awaits PTY readiness and the consumed submit.

Evidence and scope

Sources retrieved 23 October 2026, 8:57 PM ET: CHANGELOG (https://github.com/Richards-LLC/cassy/blob/v3.77.0/CHANGELOG.md), the release draft (https://github.com/Richards-LLC/cassy/blob/v3.77.0/docs/release-notes/2026-10-24-v3.77.0-slack.md), and GitHub release v3.77.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.77.0). PR #1360 (https://github.com/Richards-LLC/cassy/pull/1360) opened at 8:06:30 PM ET and merged at 8:49:31 PM ET (43m 01s, including one merge-queue ejection on a stale test that was repaired before the rerun); publication completed at 8:54:40 PM ET, 5m 09s after the merge, and the release host installed it at 8:56:44 PM ET (50m 14s from PR opened).

Changes are grouped by title, then text. Moved by hand: Recovery-suffix branches and Re-close after a target sync to Tasks (task start and close), and the macOS provisioning test was recased. Counts describe changes, not impact.

Merge-queue green (8:49:15 PM ET) to publication took 325 seconds, within the 600-second budget. Published archives were downloaded fresh and matched GitHub's SHA-256 metadata before entering the draft; 3.77.0 is installed on the release host through `cas update`. The GitHub issues fixed in this release (#1353, #1355, #1356, #1357 and #1358) were closed when their fixes reached the integration branch, before PR #1360 opened, so the fixes ledger does not count them.
