Cassy v4.13.0

RELEASE REPORT · PUBLISHED 10 NOVEMBER 2026 AT 3:36:48 PM ET

Commander stays connected when a message fails. Cassy makes sessions easier to recover.

Commander and Sessions account for 40 of the 74 changes.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

Each dot represents one CHANGELOG entry. The two largest groups show where the release made the most changes.

AREA	CHANGES	WHAT CHANGED
Commander	23	Browser installations explains a failed load and offers Retry; One bad frame no longer drops the whole connection; The hub says why a Commander connection closed; An empty conversation shows the same assistant mark as its header; Quiet missing-release evidence; Reading position holds when the connection drops; Easier taps in New session on a phone; Clearer Add worker panel and phone action sheets; Tidier Paired machines dialog; Cleaner action bars in New session and Operator inbox; Task titles lead work surfaces; Bare links are clickable; Named focus choices; Account removal confirms in its own card; One-row conversation headers; Header actions menu on desktop; Commands on a phone; Named worker cards; Accounts no longer offers Set default on the default account; Readable peer override reasons; Numbers in the reply box use the normal font; Fit hub help in a standard terminal; Keep the hub running after an invalid restart address

AREA	CHANGES	WHAT CHANGED
Sessions	17	Offline conflict precheck; Supervisor registration keeps one identity; Drained inboxes stop delivery wakes; Automatic worker context respawn; Worker queue corrections; Stopping a worker on purpose no longer reads as a failed boot; Isolated replay checkout; Quiet child work stays active; Returning QA ownership; Unread warnings no longer misreport a supervisor's native answer; Keep worker handoffs out of deliveries; Shutting down a booting worker is not a crash; Detached worker handoffs prepare the successor branch; Report a refused close without a false stall page; Refresh branches outside a narrow fetch mapping; Quiet unscoped backlog; Keep native registration working in deep sandboxes
Tasks	9	Historical ledger scaffolds; Single-task merge conflict check is advisory; Committed park outcomes; Return conflicting candidates to their workers; Keep finding priority visible during corrections; Keep supervisor notes when workers start; Rebased-delivery refusals keep merge ownership clear; Recover approval after a reviewed peer repair; Ledger init resumes an existing ledger
Messages	3	Show wake-cap holds to the sender; Follow the connected hub's message contract; Recover without restarting the session
Releases	8	Generated verdicts pass the report gate; Keep an explicit stop; Judge the plan before the presentation; Keep fresh reruns in the queue; Automatic updates survive stuck release notices; Open report uploads in their Slack thread; Train CI reruns and early failures; Published release gap warning
Memory	1	Protect handoff provenance during edits
Slack and Cloud	9	Validate Slack work issuers; Personal backlog visibility; Recover retained dependency failures; Recover personal copies after team linking; Attach verified files to managed threads; Point project identity changes to their command; Correlate mutation timeouts; Fetch proof on a cold peer; Recover expired Slack claims after an uncertain reply
Safety	4	Artifact-root refusals show both paths; Read-only SSH diagnosis; Public registration cannot inherit supervisor authority; Inspect the commit's actual directory
Total	74	8 areas

Final release PR queue run

A change is one titled CHANGELOG entry. The GitHub issue count uses issues referenced by release PR #1773 or the CHANGELOG that closed between the PR opening at 3:01 PM ET and 15 minutes after merge at 3:33 PM ET. Zero issues qualified. Request, cut and per-stage timings are unavailable.

02 / 06

What you can do now

Steadier Commander, calmer updates

Commander stays connected

WAS
if Commander failed while drawing one message from a machine, it dropped that machine's connection, got the same message again on reconnect, and showed "Reconnecting" in a loop.

NOW
Commander reports the error and keeps the connection. The hub log records why a connection ends.

One-row conversation headers

WAS
actions sat stacked above the name, and the live state was trailing "· Live" text.

NOW
name and actions share one row, live state is a pill beside the project title, and phones get a compact header with an overflow menu.

Numbers type normally

WAS
digits, # and * in the reply box showed as wide emoji-style characters, so "4.13" looked odd.

NOW
they use the normal font. Emoji still show in colour.

Plain links open

WAS
a bare `https://` address in a message or work row was plain text.

NOW
the link opens in a new tab. Trailing punctuation stays outside the link.

Matching assistant mark

WAS
an empty conversation showed the machine's letter while the header showed the Claude mark.

NOW
both show the same mark.

Tidier Accounts

WAS
removing an account used a browser pop-up, the default account offered Set default, and usage could show a reset time already past.

NOW
removal confirms inside the card you clicked, the default shows only its badge, and a stale reset reads as unknown.

Easier on a phone

WAS

New session tabs and buttons were small, action sheets didn't say what they acted on, and Paired machines filters ran off the edge.

NOW

buttons are easier to tap, action sheets name what they act on, and filters wrap.

Task titles first

WAS

work cards and chips led with an ID.

NOW

they lead with the task title and show each session's name.

Hub stays the way you left it

WAS

`cas update` restarted a hub you had stopped, and `cas hub restart` with a bad address stopped the hub before refusing.

NOW

a stopped hub stays stopped, and a bad address is refused while the hub keeps running.

Updates don't hang

WAS

an automatic update could hang for hours on a stuck release notice.

NOW

notices are time-bounded and newer versions install first.

03 / 06

Under the hood

Release changes

Violet message contract

WAS

posts had no request identity, so an uncertain write after a transport close needed a session restart.

NOW

Cassy sends request IDs and reconciles by them only when the connected hub advertises both. Older hubs get unchanged posts, and reconnect never resends an uncertain write.

Verification and merges

WAS

a stale peer approval blocked a repaired delivery, and merge conflicts surfaced as an unnamed pre-merge failure.

NOW

a fresh exact-delivery approval from the same source replaces the stale one (both kept), and conflicts report CONTENT CONFLICT with paths and return to the assigned worker.

CI watchdog and train reruns

WAS

the queued-run watchdog aged reruns from the first attempt and cancelled them, and rerunning failed Rust shards dropped earlier green shards.

NOW

each attempt ages from its own start, earlier green shards are kept, and a red run with no receipt holds merges explicitly.

Factory liveness

WAS

refused closes paged as stalls, quiet child processes looked idle, and an intentional early shutdown read as a boot failure.

NOW

the refusal code and next action show without a page, child CPU and log writes count as progress, and deliberate shutdowns record as stopped.

Supervisor identity and inboxes

WAS

a new harness session could register a second supervisor identity, and drained inboxes kept waking.

NOW

the session rebinds to its live supervisor, and read or acknowledged notifications stop waking.

Cloud sync

WAS

mutation timeouts had no correlation ID, and personal backlog after team linking was invisible and stranded.

NOW

mutations carry `X-Cassy-Attempt-Id` across retries, status shows the personal backlog, linked projects recover eligible personal copies, and retained dependency failures retry by ID.

Workers

WAS

workers could not ask for a fresh context, handoff notes could ride into deliveries, and supervisor notes were lost when a worker started from an old snapshot.

NOW

a typed respawn request recycles with recipe and bindings kept, handoff files are refused at park, and supervisor notes survive the start.

Memory and release reports

WAS

editing memory tags could restamp another machine's handoff, and generated release reports failed their own quality check.

NOW

handoff provenance is retained, and reports pass the gate without a hand edit.

QA ledgers

WAS

re-running ledger init on a resumed task failed with "File exists".

NOW

it keeps the existing ledger byte for byte and refuses only one that doesn't validate.

Evidence and scope

Sources retrieved 10 November 2026 at 4:09 PM ET. v4.13.0 CHANGELOG (https://github.com/Richards-LLC/cassy/blob/095b6ce566c1968ae91bb12b68a47aa3669c5c93/CHANGELOG.md#4130---2026-11-10) and release-notes draft (https://github.com/Richards-LLC/cassy/blob/095b6ce566c1968ae91bb12b68a47aa3669c5c93/docs/release-notes/2026-11-10-v4.13.0-slack.md). The change map uses the CHANGELOG headings to group entries by the part of Cassy they affect.

Release PR #1773 (https://github.com/Richards-LLC/cassy/pull/1773) merged at 3:18:59 PM ET on 10 November 2026. The v4.13.0 GitHub release (https://github.com/Richards-LLC/cassy/releases/tag/v4.13.0) was published at 3:36:48 PM ET. Annotated tag object `b9aad18ac47a4e431be3c2ebd9e6e2053b142e98` points to main commit 555c9ba73 (https://github.com/Richards-LLC/cassy/commit/555c9ba73a7adac51187493c2f776ec615f6b96b). The release preparation commit was 095b6ce56 (https://github.com/Richards-LLC/cassy/commit/095b6ce566c1968ae91bb12b68a47aa3669c5c93).

Release review covered 67 of 67 deliveries (artifact `art-9d498ed2`). Batch QA on the release candidate is recorded in artifact `art-7a6dab0c`. After the freeze, the repair batch addressed 157 Rust test failures and repaired the Commander journeys. The final merge-queue run (https://github.com/Richards-LLC/cassy/actions/runs/42891461646) passed with the quarantine below.

On the Linux CI runner, the HUB-J4 report-recovery journey at `read-history.journey.ts:649` moved the reader 17 px at disconnect, against a 3 px limit. The release quarantined that case. The open issue #1772 (https://github.com/Richards-LLC/cassy/issues/1772) records the two CI reproductions and local passes.

Pipeline latency

The first child commit reached main in 111,626 seconds (31h 0m 26s), 109,826 seconds over the 1,800-second target. The publication run (https://github.com/Richards-LLC/cassy/actions/runs/42894087259) published 1,069 seconds after main landed and 1,095 seconds after queue green. Both intervals were within the 1,200-second budget. Source: `release/v4.13.0-latency/release-latency.receipt`.

The close-at-release workflow is slated for v4.14.0. The posted User notes (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794343103383449) and posted Dev notes (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794343105386609) cover this cut.
