Changes shipped

1 fixed; tests and docs not counted

24m 5s

Green to published

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.80.1 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1372 or the CHANGELOG section references it and it closed between the PR opening (10:54 AM ET) and 15 minutes after its merge (11:25 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

02 / 06

What you can do now

Release changes

Terminal checks on Mac

WAS

In 3.80.0, the terminal check could approve captures with no visible output or append a stray `D` to a one-character first line.

NOW

It reports the empty capture as a failure again and keeps that first line from gaining the extra `D`.

03 / 06

Under the hood

Terminal and tooling

BSD TTY captures

WAS

In 3.80.0, terminal-qa retained BSD script's leading ^D and two backspaces, so empty TTY output could pass and a one-character first line could gain a stray D.

NOW

On macOS/BSD, runInPty strips one exact leading ^D plus two backspaces before analysis. parseAnsi keeps its cursor-moving backspace behavior.

Evidence and scope

Sources retrieved 26 October 2026, 11:46 AM ET: the CHANGELOG (https://github.com/Richards-LLC/cassy/blob/v3.80.1/CHANGELOG.md) at the v3.80.1 tag, the release draft `docs/release-notes/2026-10-26-v3.80.1-slack.md` with its published checksums and timing filled after publication, and GitHub release v3.80.1 (https://github.com/Richards-LLC/cassy/releases/tag/v3.80.1). PR #1372 (https://github.com/Richards-LLC/cassy/pull/1372) opened at 10:54:59 AM ET and merged at 11:10:12 AM ET (15m 13s, with no merge-queue ejection); publication completed at 11:34:04 AM ET, 23m 52s after the merge, and the release owner recorded installation on the release host at 11:35:12 AM ET (40m 13s from PR opened).

Changes are grouped by title, then text. Moved by hand: Terminal QA captures on macOS/BSD from Tasks to Other (a terminal capture tool, as in 3.79 and 3.80.0). Counts describe changes, not impact.

Merge-queue green (11:09:59 AM ET) to publication took 1445 seconds, over the 600-second budget; the release owner attributes the overrun to the macOS archive build (33m 54s). Published archives were downloaded fresh and matched GitHub's SHA-256 metadata before entering the draft. This hotfix fixes a 3.80.0 regression; no GitHub issue is referenced.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

No source warnings.
