What you can do now

02 / 06

Only reply (user)

Finished work closes

WAS a task whose work was already shipped could stay stuck as "waiting to merge" if a later change reworded or extended any of its lines. →

NOW Cassy recognises the later change and lets the task close, and it still refuses when work was actually lost.

Clearer automatic checks

WAS the automatic check after each merge failed every time on a machine that had not been told where to keep its scratch copy. →

NOW it says the setting is missing and names it, and runs normally once it is set.

Better testing guidance

WAS the testing guide listed rules without examples. →

NOW it includes worked good and bad examples and a guide to what should and should not be faked in a test.

Under the hood

03 / 06

Only reply (dev)

Line-ownership tracing

WAS `anchored_delivery_content_gate` reported DELIVERY CONTENT DROPPED when a later commit modified or extended a delivered line, and UNVERIFIABLE when the content lived in a merge resolution. →

NOW delivered lines are carried through the descendant DAG. Ordinary replacements, task-owned novel resolutions (remerge-proven), additive identifier-list unions and task-internal draft evolution are credited and recorded; reverts, stale-superset merges, plain deletions and foreign novel resolutions still reject, and git errors fail closed.

Reviewed-drop exit

WAS `supervisor_override` could not pass the content gate, and narrative receipts were rejected. →

NOW `reason="reviewed-drop: <SHA>[,<SHA>...] -- <why>"` resolves full commits, requires strict anchor descent, target reachability, first-parent touch of every dropped path, and records all of it.

Sweep scratch root	WAS daemon rolling integration inherited no CAS_RELEASE_GATE_HOME_DIR, so the assembly proof refused /var/tmp on every sweep. → NOW factory.release_gate_home_dir is passed to the assembly child; unset reports sweep_not_configured with no attribution probe.
cas-tdd references	WAS references/tests.md and mocking.md had few repo-specific examples. → NOW worked Rust store/Git fixture, TestEnvGuard and hub-web Vitest pairs, plus a boundary table.
