PUBLISHED 16 OCTOBER 2026 · 00:36:13 UTC · RELEASE COMMIT 4028E4CAB6030AA597AA74E2AFBEAA11A33AA47D.

Upgrades keep Slack (Violet) working, factory workers stay inside their own lane, and the release's ten verified closures land in Factory, safety and delivery gates.

SURFACE		CLOSED
Factory	● ● ● ● ●	5
Safety	● ● ● ●	4
Delivery gates	●	1
Upgrades	no listed issues	0

Factory leads the closure stitch with 5 of 10 verified closures; four make workers safer to configure and one narrows a delivery gate.

One dot, one closed issue. 3 issue-bearing surfaces.

Changelog entries
3 Added, 5 Changed and 26 Fixed top-level entries in the v3.57.0 CHANGELOG section

45 m 01 s
PR opened → merged
PR creation at 23:47:36Z (15 Oct) to merge at 00:32:37Z

3 m 36 s
Merged → published
Main landing at 00:32:37Z to release publication at 00:36:13Z

4 m 06 s
Green → published
Merge-queue gate green at 00:32:07Z to publication; within the 10 m budget

0
Manual interventions
Rescued stages and hand fixes recorded in the release-latency receipt

Closures and changelog entries are counted separately: a changelog entry is a shipped change, and only an issue referenced by the release PR that closed after the merge counts as a closure. Ten such issues closed at 00:56 UTC. PR #1224 also references #1179, which closed at 20:11:32Z on 15 October with v3.56.0, and #197, which closed in August; neither is counted here. Timing endpoints are GitHub's PR `createdAt` and `mergedAt`, the release `publishedAt`, and the release-latency receipt's gate-green time.

▼ Change map · data and reading guide

Each equal-area dot represents one issue that release PR #1224 references and that closed after it merged. The figure counts closures, not impact, effort, or severity.

Change map data · closed issues by surface

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
Factory	5	#1178, #1210, #1213, #1216, #1217
Safety	4	#1218, #1219, #1220, #1221
Delivery gates	1	#1212
Upgrades	0	The Violet upgrade repair and the Teams message fix shipped without a GitHub issue
Total	10	3 issue-bearing surfaces

What you can do now

02 / 06

Accounts and messages

Violet upgrades

WAS an update could leave Slack unable to sign in.

NOW existing accounts are repaired and checked during updates.

Profile upgrades

WAS old credentials could break sign-in after an update.

NOW every profile migrates and launches with its saved credentials.

Messages to teammates

WAS a message could be repeated or lost.

NOW it appears once, with the full body preserved.

Supervisor replies

WAS replies and requests could sit unseen.

NOW peer replies and asks wake supervisors; FYIs stay quiet.

Safer connected tools

WAS background work could run commands under your account.

NOW operator-authenticated commands and matching tools are refused.

Issue tracking

WAS an unset repository could hide a project's issue tracker.

NOW the GitHub origin supplies it, and checks show the source.

Shipped issue links

WAS fixed issues could stay open without a clear trail.

NOW new tasks suggest links, release closure warns, and checks list them.

Short send receipts

WAS every send repeated a long status.

NOW success is brief; delivery problems include the detail.

Safer message delivery

WAS a direct message could skip recipient and rate checks.

NOW every message follows the same delivery rules.

Safer stops

WAS stopping by name could interrupt unrelated work.

NOW stops are limited to the command you started.

Fewer interruptions

Smoother screens

WAS hidden views could keep updating while typing.

NOW visible views stay responsive and typing appears first.

Long-running work

WAS long commands triggered repeated quiet warnings.

NOW active work stays quiet and old warnings become one notice.

Shutdown summary

WAS stopping several background jobs produced a critical alert for each one.

NOW one clear summary reports the outcome.

Fresh start details

WAS a relaunch could show output from the previous run.

NOW notices describe only the current run.

Builds and reliability

Focused terminal checks

WAS work with no terminal output could be blocked by a terminal receipt.

NOW only changes that draw terminal output need one; other work uses its real-build proof.

Reclaimed build space

WAS old build data could crowd the disk.

NOW safe cleanup frees stale data under pressure and flags unclear results.

Memory-limited builds

WAS simultaneous builds could compete for host memory.

NOW each build stays within its configured memory limit.

Runtime settings

WAS some supported settings were not configurable.

NOW all runtime settings are readable and changeable.

Slow-work indicator

WAS a delay gave no clue what had stalled.

NOW the slow or stuck step is visible.

Release reports

WAS changes under descriptive headings could count as zero.

NOW reports count every change correctly.

Boolean settings

WAS the text values `true` and `false` were rejected.

NOW either spelling works.

Flexible scratch paths

WAS paths containing variables were refused.

NOW they are accepted.

Chosen destinations

WAS an explicit destination could route work somewhere else.

NOW work stays with the destination you choose.

Under the hood

03 / 06

Upgrade and messaging

Violet migration

WAS updates left old profile keys.

NOW all Claude/Codex profiles migrate, `tools/list` is verified, and empty bearers are refused.

Compact receipts

WAS success returned a ~540-character block.

NOW success is one line; failures keep detail in the receipt and `message_status`.

Message policy

WAS direct `SendMessage` skipped target, session, rate and origin checks.

NOW it directs callers to the validated path.

Owned command control

WAS pattern stops could interrupt another command.

NOW the hook blocks name-based kills but allows PID-scoped stops.

Memory isolation	WAS parallel compiles could exceed available memory. NOW each compile has its own configurable memory limit.
Runtime controls	WAS supported settings lacked typed command-line access. NOW all runtime settings can be read and updated consistently.
Slow-step indicator	WAS slow work hid its stuck step. NOW named budgets and the TUI identify slow or stuck steps.
Activity-aware nudges	WAS open calls triggered repeated stall nudges. NOW task activity suppresses false stalls and replaces stale nudges.
Shutdown receipts	WAS shutdown alerted critically for every command. NOW one non-critical summary reports outcomes; unexpected deaths still alert.
Recycle diagnostics	WAS a same-name relaunch could quote prior output. NOW old session output is cleared before the new session starts.

Reports and API inputs

Release report parsing	WAS summaries under `Fixed`/`Changed` were not counted. NOW descriptive sections count; presentation headings are ignored.
Boolean decoding	WAS MCP rejected string booleans. NOW `true`/`false` work; invalid values still fail.

Rendering, disk use and paths

Render scheduler	WAS redraws could delay typing. NOW focused/unfocused/off-screen panes cap at 15/5/0 fps; typing draws first; the spawn spinner caps at 10 fps.
Memory-limited systemd builds	WAS systemd-run expanded `$VAR` in embedded test scripts on systemd 254+, breaking checks. NOW `--expand-environment=no` sends them to Bash and Python unchanged.
Terminal-QA scope	WAS backend and mux input/PTY/resize changes could require a terminal receipt. NOW only CLI drawing paths and cas-mux render.rs, pane/style.rs, and pane/snapshot.rs require receipts; no-surface tasks and mux input/PTY/resize use the real-build interaction ledger.
Disk-cache reclaim	WAS stale worker build caches could consume disk under pressure and blur uncertain results. NOW GC safely reclaims stale caches and reports `indeterminate` separately.

Scratch-path variables	**WAS** paths containing `$VAR` were refused. **NOW** variable paths are accepted.
Explicit epic targets	**WAS** an explicit `epic/` target could use the task lane. **NOW** it selects that epic's lane.
Reliable unread alerts	**WAS** acted-on messages could still trigger unread alarms. **NOW** only evidence tied to that message clears its alarm.
Reliable activity alerts	**WAS** unrelated activity could hide a real stall. **NOW** only evidence tied to that work row suppresses its alarm.
Faster release checks	**WAS** a large release needed repeated child checks. **NOW** one bounded check verifies every released child.
Quieter optional integrations	**WAS** an unset optional key logged as an error every session. **NOW** missing keys log quietly; real failures remain errors.
Private launch credentials	**WAS** launches could miss migrated profile credentials. **NOW** every profile migrates, launches load private credentials, and empty tokens are never sent.

Evidence and scope

06 / 06

The report covers the v3.57.0 runtime published from release commit `4028e4cab6030aa597aa74e2afbeaa11a33aa47d`. The closure window is the issues referenced by PR #1224 (https://github.com/Richards-LLC/cassy/pull/1224) that closed after its merge at 00:32:37Z on 16 October 2026. The changelog is at the release commit (https://github.com/Richards-LLC/cassy/blob/4028e4cab6030aa597aa74e2afbeaa11a33aa47d/CHANGELOG.md), the published release is v3.57.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.57.0), and the user-facing wording follows the release-notes draft `docs/release-notes/2026-10-15-v3.57.0-slack.md`.

Timing sources: GitHub PR #1224 (`createdAt` 23:47:36Z on 15 October, `mergedAt` 00:32:37Z), release `publishedAt` 00:36:13Z, and the release-latency receipt `~/.cas/artifacts/release/v3.57.0-latency/release-latency.receipt` (gate green 00:32:07Z, 246 s to publication, budget 600 s, no blockers, no interventions). The receipt records no request, cut or per-stage timings, so those are unavailable, and no install time is claimed. Retrieved 16 October 2026 at 05:11 UTC.

Not counted as closures: #1211 (the factory TUI architecture) and #1215 (peer coordination; part b shipped here) are still open, and #1179 and #197 closed before this release. Dots count issue closures, not impact, effort, or severity.
