Cassy v4.16.0 RELEASE REPORT · PUBLISHED 11 NOVEMBER 2026 · 1:20 PM ET

Each shipped task now closes on its own review. At publication 14 of 52 were closed; 38 waited for a review or proof.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.16.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	6	Resume after worker recycle; Shell script calls; Long notices reach the supervisor once; Recover unassigned worker branches after reboot; Honor peer-approved source anchors; File defects to a supervisor
Tasks	5	Preview closeout before enqueue; Shared-file ownership after task rollover; Pre-merge verifier response; Close shipped members independently; Replay stale closeout operations once
Messages	2	Recover replies after a disconnect; Exhausted installation notices
Releases	2	One verdict for the published release; Reconcile with the installed release
Total	15	4 areas

15

Changes listed

15 fixed; tests, docs, known limits and upgrade notes not counted

4m 27s

Main to published

Met the 20m budget; merged release to GitHub publication

5h 17m 25s

First child to main

Missed the 30m budget; first child commit to merged release

1

Queue runs

One merge-queue run proved the final tree

4m 52s

Green to published

Within budget (20m 0s budget); Merge-queue CI completion to publication

14 of 52

Closed at publication

7 closed by this release, 7 already closed; 38 held and listed by name

Changes and GitHub issues are counted separately. A change is one titled entry in the v4.16.0 CHANGELOG section; entries under Test, Doc, Known limits, Upgrade, Migration or Operator guidance headings are listed under the hood but not counted. A GitHub issue counts when release PR #1828 or the CHANGELOG section references it and it closed between the PR opening (12:59 PM ET) and 15 minutes after its merge (1:30 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. The timing receipt records no blockers and zero interventions; these zero figures are omitted above. Not measured for this release: request to published, cut to published, lesson recurrence.

Closeout at publication: the v4.16.0 binary (reconciler version 4.16.0, per the release reconcile receipt for the shipped commit) reconciled its own release at 1:20 PM ET. Of 52 shipped tasks, 7 closed and 7 were already closed. 38 stayed open and were listed by name: 35 had no recorded review and 3 had no proof for a no-code delivery. Six containing epics stayed open because they still hold unfinished work. Afterwards, three release review receipts recorded between 1:25 and 1:42 PM ET named 45 earlier deliveries from v4.14.0 to v4.16.0; all 45 are now closed, 39 by 1:50 PM ET and 6 more at 5:21 PM ET.

02 / 06

What you can do now

Releases that close their reviewed work

Shipped work closes

WAS

one release-wide check held every task, so the last two releases closed 0 of 58 and 0 of 40.

NOW

each shipped task closes on its own approval; a task with no review stays open and is listed by name. At this release's own publication that closed 14 of 52 and listed the other 38.

A cut that would close nothing is refused

WAS

you found out after publishing that nothing closed.

NOW

before anything is pushed, the cut previews what will close and refuses if the answer is zero.

Updates close out with the new version

WAS

the old binary did the cleanup for the new release, so the release's own fixes never applied to it.

NOW

the new version installs first, then cleans up; an older cleanup is replayed once by a newer version.

Train checks finish

WAS

every merge cancelled the train's running check, so a full check almost never completed.

NOW

the running check finishes and only the newest waiting push runs after it.

Fewer stuck moments

WAS

Commander replies could stick at "selected", a release notice retried forever, and after a reboot, unfinished work couldn't be picked back up.

NOW

replies recover after a disconnect, notices stop after ten tries, and unfinished work resumes after a reboot.

03 / 06

Under the hood

Release changes

Per-member close

WAS

duplicate whole-release gates refused the release when any member lacked proof, and approvals bound by peer pre-merge attestations were ignored (head_commit only).

NOW

one evaluator closes each member whose recorded approval binds an anchor in the published ancestry; REVIEW_MISSING members stay open as named residuals; source_sha/anchor_commits attestations count.

Cut preview

WAS

no closeout signal before publishing.

NOW

`scripts/release.sh` runs `cas release preview` on the exact Linux prebuild (or one candidate) before push, refuses members > 0 with would_close == 0, records per-reason counts and build seconds in the cut receipt; standalone hotfixes with no members skip it.

Reconciler version

WAS

a pre-install binary reconciled the new release.

NOW

install verifies the new binary before closeout, receipts stamp the reconciling version, and an older stamp is replayed once.

Release batch receipts

WAS

`batch_receipt verification_type=release` required the published SHA inside each member's historical epic ref.

NOW

it checks each member's delivery ancestry against the published SHA.

Train CI

WAS

`cancel-in-progress` on train refs cancelled every in-flight run; apt installs of gcc/mold and Playwright `--with-deps` made every hosted train run depend on Ubuntu mirrors (seven runs red during today's Canonical DNS outage).

NOW

train refs keep one running and one pending run; one shared linker step skips apt when tools are present and fetches checksum-pinned mold 2.40.4 from GitHub otherwise; Playwright installs system packages only when `ldd` finds a missing library.

Factory

WAS

transfers after a reboot refused "no prior assignee", recycle kept the old lease, `bash script.sh > log` was refused as a nested shell, filing a task to the supervisor ran worker freshness checks, worktree_merge could time out opening a verifier.

NOW

each of those paths works.

Evidence and scope

Each change is placed in a product area by the words in its title, then its text; a change that matches no area is listed under Other.

Release PR: https://github.com/Richards-LLC/cassy/pull/1828 (https://github.com/Richards-LLC/cassy/pull/1828) (merged 11 November 2026 · 1:15 PM ET).

Release-notes draft: release source (https://github.com/Richards-LLC/cassy/blob/37bdfd7ea000d9916eb363c799d03bb581e3e793/docs/release-notes/2026-11-11-v4.16.0-slack.md). Posted User thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794421400663649) and Dev thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794421402668339).

CHANGELOG source: published CHANGELOG (https://github.com/Richards-LLC/cassy/blob/37bdfd7ea000d9916eb363c799d03bb581e3e793/CHANGELOG.md).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v4.16.0 (https://github.com/Richards-LLC/cassy/releases/tag/v4.16.0) (published 11 November 2026 · 1:20:10 PM ET).

Release receipt (relative to ~/.cas/artifacts): `release/v4.16.0-latency/release-latency.receipt`.

Published identity: annotated tag `ee467d282e1979f0fae7ee539759643e75c9ffa2` points to shipped commit `37bdfd7ea000d9916eb363c799d03bb581e3e793`. Publication and all three asset digests were re-read from the GitHub API (https://api.github.com/repos/Richards-LLC/cassy/releases/tags/v4.16.0).

Validation: one merge-queue run (https://github.com/Richards-LLC/cassy/actions/runs/43073716981) proved the final release tree. No application journeys, installation success on every machine or before/after captures are claimed.

Timing endpoints: first child commit to main landing is 19,045 seconds against 1,800 (missed); main landing at 1:15:43 PM ET to GitHub publication at 1:20:10 PM ET is 267 seconds against 1,200 (met). Queue green at 1:15:18 PM ET to publication is 292 seconds against 1,200 (met). Stage timings are unavailable: the latency receipt records no STAGE_SECS.
