Changes shipped

1 fixed, 5 changed; tests and docs not counted

15m 16s

Green to published

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.64.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1285 or the CHANGELOG section references it and it closed between the PR opening (11:05 AM ET) and 15 minutes after its merge (9:18 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues were closed with this release. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

Checks and status

Health checks

WAS matching web addresses could be reported as a mismatch.

NOW the missing live connection is named and its address appears once.

Project identity

WAS warnings repeated and advised splitting paths you had set on purpose.

NOW the shared identity appears once, with no split advice.

Older activity

WAS Cassy could say history was current while older records lacked details.

NOW health checks spot the gap, and upgrades repair it without losing history.

Output and recovery

Project lists in JSON

WAS asking for JSON could still print ordinary text.

NOW the project list and status each return one JSON document.

Updates for every project

WAS JSON updates could print several separate documents.

NOW one document holds each project's update steps.

Support reports

WAS a missing setting could send Cassy reports to your project's tracker.

NOW they go to Cassy's tracker, and a bad setting stops with a clear fix.

Saved patterns

WAS a pattern that saved could still be reported as failed.

NOW success is clear, and an uncertain result says to check before retrying.

Upload recovery

WAS blocked uploads still suggested a retry that would not help.

NOW retry advice appears only when retrying can work.

Setup and cleanup

Your /finish command

WAS updates could overwrite or drop it.

NOW it installs everywhere you use Cassy and keeps your own edits across updates.

Cache cleanup

WAS caches with an unknown owner could only be listed.

NOW you can opt in to remove one named cache after safety checks; not yet verified on Mac.

Under the hood

03 / 06

Diagnostics

Hub route status

WAS a missing live Serve shim read as a route mismatch.

NOW missing-shim state is named; mismatch diagnosis is kept for real mismatches.

Registry collisions

WAS repeated per project, with split advice for pinned roots.

NOW host collisions reported once; pinned roots get an identity-review warning only.

Legacy queue schema

WAS ledger reported current while a lazy queue lacked report columns.

NOW doctor names the gap; explicit migration repairs it and preserves delivery meaning.

Structured output and routing

Known-project JSON

WAS `known-repos list/status` could ignore `--json`.

NOW either flag position returns one document; human defaults unchanged.

Update JSON

WAS `update --all-projects --json` emitted multiple documents or leaked phase text.

NOW phases nest in one document; uncapturable phases are not run.

Cassy issue routing

WAS an unset component key fell back to the project tracker.

NOW the effective Cassy key wins; invalid targets fail closed with a staged remedy.

Push retry advice	**WAS** blocked-only Cloud errors got generic retry advice. **NOW** suppressed for blocked-only; retryable work keeps its recovery path.

Managed replies and delivery signals

Pattern creation	**WAS** a bare-row create response decoded as failure. **NOW** bare and wrapped shapes decode; incomplete replies return uncertain with no-retry guidance.
Managed-thread replies	**WAS** no journaled claim-renew or reply-intent operations. **NOW** explicit actions check thread, claim generation and expiry; expired claims fail closed.
Communication SLOs	**WAS** unenrolled operator snapshots counted as zero receipts. **NOW** they render N/A; enrolled deliveries without receipts still breach.
Pending notices	**WAS** idle notices repeated while exact-tip CI was pending. **NOW** matching lease, task, pushed tip and pending CI suppress repeats; unknown states keep them.

Codex and operator setup

Child cache env	**WAS** approved tool-cache paths were dropped at Codex child launch. **NOW** allowlisted cache variables pass through; unrelated secrets stay filtered.
/finish	**WAS** updates could overwrite or omit the user-level command. **NOW** installed across supported harnesses, user overrides preserved through updates.
Codex lifecycle hooks	**WAS** supported hooks reported unavailable; trusted setup incomplete. **NOW** generated config provisions trust and supported hooks; idle-wake stays a separate contract.
Codex specialist review	**WAS** subagent support undetected, no native task-verifier role. **NOW** capability detection installs the role without weakening independent review.
Verification-only close	**WAS** proof-only work refused or pointed at a foreign shared branch. **NOW** bounded proof recorded without merging or attributing a foreign tip.

Release and cache operations

Post-publication report	**WAS** a successful main-push release could be rejected before report delivery. **NOW** accepted only when workflow, tag and landed source agree.

Unknown-owner cache reclaim	`WAS` inventory only. `NOW` explicit exact-target opt-in after ownership, process, evidence, path and lease checks; macOS not verified.

Evidence and scope

06 / 06

Retrieved: 19 October 2026 · 9:23 AM ET.

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-18-v3.64.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.64.0; retrieved 19 October 2026 · 9:23 AM ET.

Each change is placed in a product area by the words in its title, then its text. Areas were corrected by hand: Codex and operator setup moved to Sessions, Managed replies and delivery signals to Slack and Cloud, and Cache cleanup to Releases (build caches).

Release PR: https://github.com/Richards-LLC/cassy/pull/1285 (https://github.com/Richards-LLC/cassy/pull/1285) (merged 19 October 2026 · 9:03 AM ET).

Release-notes draft: `docs/release-notes/2026-10-18-v3.64.0-slack.md`.

CHANGELOG source: `CHANGELOG.md`.

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.64.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.64.0) (published or unknown).

Release receipt: `release-latency.receipt` (measured 19 October 2026 · 9:22 AM ET with `scripts/release-latency-receipt.sh v3.64.0`): merge-queue green 13:03:23Z (run 39255257796) to published 13:18:39Z is 916 s against a 600 s budget. The release workflow's prebuilt-archive lookup took 10m 58s of that (13:04:19Z–13:15:17Z); no fallback build ran.

Publication timeline (UTC): release PR #1285 (https://github.com/Richards-LLC/cassy/pull/1285) opened and queued 18 October 15:05; the first queue run failed at 15:24 on a stale release-test fixture; the fixture was corrected and the PR re-queued 19 October 12:50:37; it landed on `main` at 13:03:55; release workflow 39256999479 (https://github.com/Richards-LLC/cassy/actions/runs/39256999479) published at 13:18:39; the reference host installed v3.64.0 at 13:19:36. PR opened to installed: 1335 minutes. Install path proof 39259058031 (https://github.com/Richards-LLC/cassy/actions/runs/39259058031) passed on hosted macOS Apple Silicon and a clean Linux container; the manual consumer-Mac Gatekeeper checklist was not exercised, and unknown-owner cache reclaim is not verified on macOS.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

No source warnings.
