

Newer, cheaper models by default, and Haiku is gone.

What you can do now02 / 06

Only reply (user)

Newer models

WAS

everyday coding ran on GPT-5.6 Luna and planning on Fable 5.1. →

NOW

coding runs on GPT-6 Sol; planning, design and hard problems run on Claude Opus 5.5.

Haiku retired

WAS

small chores ran on Claude Haiku. →

NOW

they run on GPT-6 Luna, and Haiku is not used anywhere.

Faster session end

WAS

ending a session could pause while summaries and reviews ran. →

NOW

they run in the background after the session ends.

Claude Code check

WAS

nothing told you when Claude Code was out of date. →

NOW

Cassy warns below 2.1.280 and suggests c1aude update.

Better browser testing

WAS

Cassy's testing guidance was several Playwright versions old. →

NOW

it follows Playwright 1.63, checks accessibility modes and loading, error and empty states.

Under the hood03 / 06

Only reply (dev)

Lane registry

WAS

standard gpt-5.6-luna/xhigh, supervisor and taste claude-fable-5-1/medium, heavy gpt-6-astra/high, light claude-haiku. →

NOW

standard gpt-6-sol/medium (fb gpt-6-luna/xhigh), supervisor/taste/heavy claude-opus-5-5/high (fb fable-5-1/high, opus-5/high, gpt-6-astra/high), light gpt-6-luna/xhigh (fb opus-5-5/low) (PR #964).

Haiku removed

WAS

claude_haiku recipe plus Haiku defaults in daemon, hooks, init and extraction. →

NOW

recipe deleted; registry, slug and spawn validation reject Haiku with a light-lane pointer (PR #964).

Maintenance jobs	WAS Stop blocked and asked the parent session to spawn Haiku subagents. → NOW Stop queues light-lane one-shot Codex jobs (flock-serialized, 300 s cap); daemon extraction uses the same runner (PR #964).
Claude conformance	WAS no Claude Code live matrix or receipt. → NOW claude-code-2.1.280 receipt (11 pass, 2 not_covered); preflight/doctor warn below the pin (PR #964).
Codex matrix	WAS pinned to suspended gpt-5.6-terra, two trivial cs calls. → NOW follows the standard-lane recipe, complex-schema check, budget_aborted liveness, request_user_input disabled for workers (PR #964).
Playwright skills	WAS nuxt-playwright predated 1.56 (networkidle, no aria snapshots) and there was no managed debugging skill. → NOW builtin cas-playwright-debug (trace CLI, --debug=cli, locks, isolated retries); nuxt-playwright and frontend-engineering on 1.63 idioms.
Release workflow	WAS commit-subject notes were pasted into a shell string, so a quoted subject broke v3.28.0 publishing. → NOW notes go through a file; run blocks carry no GitHub expressions, enforced by lint and a gate row (PR #966).
Assets	WAS n/a. → NOW cas-x86_64-unknown-linux-gnu.tar.gz d449343612e14fbab52f4139696ec77062233172bae48cbb31f8cf41f1d6c5d7; cas-aarch64-apple-darwin.tar.gz 588b2cd51533b3783ab0f9aad8a599fb88229e17be4133fe335e934329562b37.
