PUBLISHED 16 OCTOBER 2026 · 13:04:03 UTC · RELEASE COMMIT F15CCB5E9378921DEE5949E7E871207EFC60085B.

Cleanup no longer competes with typing, proof receipts keep each number with its own field, and `cas peers --detail` shows who owns which work across machines.

SURFACE		CLOSED
Sessions	no listed issues	0
Projects	no listed issues	0
Commander	no listed issues	0

No GitHub issue closed with this release: the receipt-parser report and the peer-coordination field report both remain open, so every surface carries a label and no dots.

One dot, one closed issue. 0 issue-bearing surfaces.

0
Verified closures
Issues referenced by PR #1228 and closed after its merge

3
Changelog entries
1 Added and 2 Fixed top-level entries in the v3.60.0 CHANGELOG section

18 m 00 s
Opened → merged
Release PR #1228 opened at 12:39:32Z to its merge at 12:57:32Z

6 m 31 s
Merged → published
Main landing at 12:57:32Z to release publication at 13:04:03Z

6 m 34 s
Green → published
Merge-queue gate green at 12:57:29Z to publication; 394 s against a 600 s budget

0
Manual interventions
Rescued stages and hand fixes recorded by the release-latency receipt

Closures and changelog entries are counted separately: a changelog entry is a shipped change, and only an issue referenced by the release PR that closed after the merge counts as a closure. None did. The section's one Tests entry and one Documentation entry are listed under Under the hood but not counted as changelog entries. Timing endpoints are GitHub's PR `createdAt` and `mergedAt`, the merge-queue gate's green time and the release `publishedAt`; the release passed the merge queue on its first attempt. Per-stage timings were not recorded, so they are not shown.

▼ Change map · data and reading guide

Each equal-area dot represents one issue that release PR #1228 references and that closed after it merged. The figure counts closures, not impact, effort, or severity.

Change map data · closed issues by surface

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
Sessions	0	The cleanup sweep moved off the input loop as part of the factory-loop work, which has no closing issue
Projects	0	The receipt parser fix and the peer ownership board shipped; both linked reports stay open for follow-up
Commander	0	No Commander changes in this release
Total	0	0 issue-bearing surfaces

Sources: release PR #1228 (https://github.com/Richards-LLC/cassy/pull/1228), CHANGELOG at the release commit (https://github.com/Richards-LLC/cassy/blob/f15ccb5e9378921dee5949e7e871207efc60085b/CHANGELOG.md), and the issue states in Evidence and scope. Retrieved 16 October 2026 at 13:10 UTC.

What you can do now

02 / 06

Sessions

Typing during cleanup

WAS background cleanup could interrupt typing. →

NOW that cleanup runs separately from the input loop.

Projects

Proof receipts

WAS a receipt could mistake one field's number for another or reject a valid short form. →

NOW numbers stay with their fields, and supported short forms work.

See shared work

WAS the peer list gave little context about who owned work. →

NOW `cas peers --detail` shows ownership, pending merges and working folders across machines, with private or outdated information labelled.

Under the hood

03 / 06

Sessions

Cleanup I/O

WAS fallback pointers, bounces and probe revalidation could delay the input or write path. →

NOW heavy work runs off-loop, with short durable writes and guarded retry and shutdown recovery.

Projects

Receipt parsing

WAS neighbouring fields could lend numbers, and `-j16 x3` failed. →

NOW fields own their numbers; `-j16`, `--jobs 16` and bound `x3` work, while explicit low run counts refuse.

Peer board

WAS presence lacked work ownership context. →

NOW `cas peers --detail` and `--json` show splits, task owners and claims, PR heads, workers, waiting merges and roots, with private, stale and unknown evidence labelled. The board is read-only: it shows conflicts and does not prevent them.

Retarget regression

WAS double retarget to a remote-only target lacked a close-handler regression. →

NOW it proves unmerged work stays `MERGE REQUIRED` without a completion notice; the production guard is unchanged.

Previous release report

WAS v3.59.0 lacked its standalone report bundle. →

NOW Markdown, brief, HTML, PDF and visual QA evidence are committed.

ISSUE	STATE	CLOSED	THEME

No issue closed in the counting window. Open and related: #1222 (https://github.com/Richards-LLC/cassy/issues/1222) (receipt parser) and #1215 (https://github.com/Richards-LLC/cassy/issues/1215) (peer coordination field report), both open at 13:10 UTC.

Install

05 / 06

```
cas update --yes --version 3.60.0
```

- macOS ARM64 — download archive (https://github.com/Richards-LLC/cassy/releases/download/v3.60.0/cas-aarch64-apple-darwin.tar.gz), SHA-256 `ab5dbb22abc0eb271277f1d62da12384c9e2af4afbefbf2064853bea833079c0`, 32,819,961 bytes.
- Linux x86_64 — download archive (https://github.com/Richards-LLC/cassy/releases/download/v3.60.0/cas-x86_64-unknown-linux-gnu.tar.gz), SHA-256 `3abc06ca4d9a459101267a60761664b192ad686b304b142df625c4c9973e232d`, 37,678,372 bytes.

Evidence and scope

The report covers the v3.60.0 runtime published from release commit `f15ccb5e9378921dee5949e7e871207efc60085b` (tag v3.60.0). Its scope runs from v3.59.0 main `42dabfb3744ef36de3f63809efe9df5611d98e0f` through epic tip `3f1d91ffdaeb336e87e46a09c6b7e9f8bbf1d523`. The closure window is the issues referenced by PR #1228 (https://github.com/Richards-LLC/cassy/pull/1228) that closed after its merge at 12:57:32Z on 16 October 2026. The changelog is at the release commit (https://github.com/Richards-LLC/cassy/blob/f15ccb5e9378921dee5949e7e871207efc60085b/CHANGELOG.md), the published release is v3.60.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.60.0), and the user-facing wording follows the release-notes draft `docs/release-notes/2026-10-16-v3.60.0-slack.md`.

Timing sources: GitHub PR #1228 (`createdAt` 12:39:32Z, `mergedAt` 12:57:32Z), the release workflow run 38904224666 (https://github.com/Richards-LLC/cassy/actions/runs/38904224666) on `main` (created 12:57:34Z, success) and release `publishedAt` 13:04:03Z. The green-to-published figure comes from the release task's latency receipt (gate green 12:57:29Z, merge-queue run 38902232220, 394 s within a 600 s budget, 0 interventions, 0 blockers); it was written to the task's artifacts rather than `~/.cas/artifacts/release/`, so the report generator could not find it. Request-to-published, cut-to-published and stage timings were not recorded.

Asset digests: both archives were downloaded fresh after publication and hashed with `sha256sum`; each matches the GitHub release digest above. The release host runs `cas 3.60.0 (f15ccb5 2026-10-16)`, and the macOS host reports the same version after `cas update`.

Peer board check, 16 October 2026 at 13:10 UTC, on both machines running 3.60.0. From the macOS host, the cas-src board showed the Linux host's live supervisor with four tasks and their owners and claims, PR heads, five live workers with worktree and scratch roots, and five waiting merges; three older supervisors were labelled stale with unknown or unavailable sections. From the Linux host, the gabber-studio board showed the macOS host's live supervisor with three live workers; its PRs and splits were labelled unavailable because that supervisor's daemon started before the upgrade. Limits: no repository had a live supervisor on both machines at the same time, so each direction was checked in a different repository, and no private peer was present (every peer shares the account), so private labelling remains covered by fixtures only.

Not counted as closures: #1222 (https://github.com/Richards-LLC/cassy/issues/1222) and #1215 (https://github.com/Richards-LLC/cassy/issues/1215) are open; this release ships the parser fix for the first and one part of the second. Dots count issue closures, not impact, effort, or severity.
