What you can do now

02 / 06

Only reply (user)

Mac hub keeps answering

WAS a Mac hub could stop answering, and Commander showed Degraded, while the hub process stayed alive. →

NOW the hub keeps answering, and a slow session list can no longer freeze it.

Under the hood

03 / 06

Only reply (dev)

Session reads off the reactor

WAS `list_sessions` ran on Tokio workers from the 1 s catalog task and every `/v1/sessions` call, so a stalled SQLite close or open pinned them all. →

NOW the read model runs on `spawn_blocking` with single-flight; callers wait at most 20 s and join the running read.

Registry churn

WAS every pass closed and reopened each listed project's agent registry, and a `sqlite3WalClose` could race a `sqlite3BtreeOpen` on the same file. →

NOW listed registries stay open across passes and are released when the project leaves the list.

shared_db closes

WAS a connection closed wherever the last caller dropped it, outside any lock, so a close could race an open of the same file. →

NOW the pool owns every close, under the same per-database lock opens take, through an idle sweep (60 s TTL, at most 16 idle); the CLI closes idle connections on exit, and update backup and rollback close them before copying `cas.db`.

Regression tests

WAS nothing exercised the wedge. →

NOW `/v1/health` answers while four catalog reads stall on a two-worker runtime, and a 24-thread × 2000-round open/drop stress test asserts one open per database; both fail on the old code.

Fixes ledger

04 / 06

Issue register · 0 verified closures

ISSUE	STATE	CLOSED	THEME
-------	-------	--------	-------

```
cas update # install v3.34.1 through the project's normal release channel
```

GitHub issue theme assignment uses labels first, then the keyword table in the CLI. Any issue classified as Unclassified is shown in the map so a human can correct the Markdown before rendering.
