What you can do now

02 / 06

Only reply (user)

Second reviewer

WAS the person who built a change was the only one to try it. →

NOW someone else walks it on the real build, including phone, dark mode and keyboard, before it can merge.

Proof at close

WAS a visible change could be marked done without a recording or screenshots. →

NOW it needs a recorded walkthrough, light and dark screenshots at desktop and phone sizes, and a polish score.

Hub flow checks

WAS hub releases were checked piece by piece. →

NOW the eleven main hub flows are tested end to end, and a release waits for a scored walkthrough.

Command palette

WAS typing filtered nothing, Enter did nothing, and reopening kept old text. →

NOW it narrows to matches, Enter opens the conversation ready to reply, and it reopens clean.

High contrast

WAS in Windows high-contrast mode the palette had no edges or visible focus. →

NOW edges, a full focus ring and a clearly marked open session.

Stuck tasks

WAS some finished tasks could not be marked done. →

NOW they close normally, with the correction recorded.

Under the hood

03 / 06

Only reply (dev)

Independent QA pass

WAS no second look before merge. →

NOW parking a user-facing delivery opens a `qa_pass` round and QA task for a non-implementer reviewer; `worktree_merge`, the raw git merge guard and the close backstop require a passed or waived round for the tip (`migration 257`, `qa.independent_pass`).

Evidence close gate	WAS demo_statement closes relied on prose. → NOW the close validates the cas-c3b8 bundle.json for the delivered head (trace Expect steps, receipt, aria, polish renders, visual-qa, critique floor); non-web demos need a real-build ledger row and terminal-qa when render paths change (qa.evidence_gate).
Skip markers	WAS an added fixme/skip/only could slip through. → NOW every delivery is scanned, with a logged cas-allow-skip escape.
Hub journeys	WAS no end-to-end hub flow suite. → NOW HUB-J1.J11 in hub-web/e2e/journeys; release prep blocks until a scored evaluation covers the hub-web/dist tree.
Palette filter	WAS .palette-command display:grid overrode [hidden]. → NOW hidden rows hide, session matches sort first, HUB-J3 asserts it.
Palette keyboard and focus	WAS Enter in the filter left the dialog open; jumps left focus on body; a lease render could rebuild the open dialog and wipe the filter; reopen kept stale filter state. → NOW Enter closes and jumps, keyboard/mouse jumps focus the composer (touch does not), render() treats focus in the open palette as composing, and open resets the filter.
Forced colors	WAS palette rows and dialog had no edges and the focus ring was clipped by the list's overflow. → NOW ButtonBorder rows, CanvasText dialog edge, an inset ring, and an open-session Highlight fill that survives hover (8.73:1 minimum).
Scoped proof surface	WAS nested test modules could be missed by the scoped-proof surface check. → NOW nested modules are qualified, with tests (PR #972).
Ledger grammar	WAS the close gate required a leading pipe the docs didn't show. → NOW rows with or without outer pipes are accepted.
Close-gate deadlock	WAS proof_scope_fix needed a delivery transaction a supervisor merge never created. → NOW worktree_merge records an observed merge; scope and risk corrections work in progress or parked; override waives measured gaps but keeps the scoped proof (PR #969).
Assets	WAS n/a. → NOW cas-x86_64-unknown-linux-gnu.tar.gz 794d4607b09a419021e8f416ffc037291b7e2f95bd1b7613e84a171a34fbcd7e; cas-aarch64-apple-darwin.tar.gz 043cfb46422510185865a1377c391971da5ef4b4d04df7953c50c9ba08c987a4.
