What you can do now

02 / 06

Only reply (user)

Names and layout

WAS long machine and supervisor names ran under timestamps or were cut off. →

NOW they wrap or shorten cleanly in the list, header, picker and Send button.

Phone

WAS the "Jump to latest" chip and the "connected" toast covered messages and the header. →

NOW both sit clear of the thread, and the session picker shows every session's details.

Keyboard

WAS some routes dropped focus onto the page, so the next Enter did nothing. →

NOW focus always lands where you expect, including after the page refreshes.

Colours

WAS a new machine could re-colour the others, and high-contrast mode lost the selected row. →

NOW each machine keeps its colour, and the selected row stays highlighted.

Outages

WAS during a connection drop the whole conversation faded until it was hard to read. →

NOW only the terminal dims; the conversation stays readable.

Tasks stay yours

WAS a sync from another project could overwrite one of your tasks when the IDs matched. →

NOW your tasks are never replaced by another project's.

Under the hood

03 / 06

Only reply (dev)

Commander polish

WAS the 2026-09-23 journey evaluation logged clipping, overlap, focus-to-body, re-colouring and forced-colour gaps. →

NOW all fixed, each with independent QA and a journey stage; the combined epic walk scored 7/8 cells, and the eighth (outage contrast) is fixed too (PR #1010).

Team pull	WAS pull stamped origin-less rows with the requested scope, so a foreign task sharing an ID replaced a local one. → NOW those rows are parked, and an ID collision with a live local task is journaled and shown by <code>cas doctor</code> (PR #1010).
Merge lane	WAS a task moved into an epic kept its trunk target, and <code>worktree_merge</code> pushed it to main. → NOW the move carries the epic lane, and an epic child that resolves to trunk needs <code>allow_trunk</code> (PR #1010).
QA and close gates	WAS a rejected QA round sometimes opened no next round, and a close after a handoff measured a branch that didn't exist. → NOW round N+1 always opens, and close measures the branch holding the commits (PR #1010).
Store and guards	WAS task writes failed with "database is locked" under load, and a worker's Neon SQL could write to production. → NOW writes take <code>BEGIN IMMEDIATE</code> with retry, and production-branch writes from workers are denied (PR #1010).
Test hygiene	WAS journeys could attach to another checkout's server, and the <code>systemd</code> restart test killed itself on hosts running a hub. → NOW journeys use per-checkout ports and refuse a taken port, and the test uses a disposable child PID (PRs #1010, #1012).
