What you can do now

02 / 06

Everyday use

Why questions

WAS asking why code was built a certain way got a plausible guess. →

NOW the cas-why skill answers from recorded history, rates each claim Documented, Inferred or Unknown, and lists where it looked.

Claims of done

WAS "done" could mean tested or merely assumed. →

NOW every claim is VERIFIED, NOT VERIFIED or INCONCLUSIVE, with proof scaled to the risk of the change.

Verification kit

WAS every QA pass rediscovered how to launch and drive your app. →

NOW cas-qa-craft writes a launch recipe and a feature map your project keeps in docs/qa/.

Feature map upkeep

WAS a feature map went stale without anyone noticing. →

NOW a static check and an opt-in close check name the stale file; map unchanged: <reason> accepts a change as is.

Automatic learning

WAS session learning reread whole transcripts at every stop. →

NOW by default it waits for 10 turns and 2 hours, then reads only what is new.

Lessons become checks

WAS every recurring lesson ended as a written rule. →

NOW lessons a check could enforce are tagged, and promoting one opens a task to build that check.

Search

Search types

WAS the search tool's help left out spec and artifact. →

NOW it lists every type it accepts.

Under the hood

03 / 06

Verification and QA

Claim verdicts

WAS verify-before-claim and task-verifier had no shared verdict. →

NOW VERIFIED / NOT VERIFIED / INCONCLUSIVE per claim, a four-rung blast-radius ladder, same-command baseline/treatment.

Verification kit

WAS no reusable launch and drive recipe per project. →

NOW cas-qa-craft generates docs/qa/verify.md and docs/qa/features/; check-feature-map.mjs checks headings, Touches globs and the index.

Feature-map close gate

WAS nothing tied a diff to its feature doc. →

NOW opt-in on docs/qa/features/; a touched glob without its feature file refuses unless a map unchanged: <reason> decision note exists.

Merges and closes

Red lane CI

WAS worktree_merge treated CI as advisory, so a red lane merged. →

NOW red refuses with the run URL; supervisor_override=true needs a reason and is logged; pending never waits.

Repeat refusals

WAS the same close gate could refuse the same patch loop again and again. →

NOW repeatable refusals end with a premise-note stop; the merge-required handoff omits it.

Failure policy

WAS retries and close reasons were free-form. →

NOW retry by failure mode with a two-retry cap, four required brief fields, PASS/ISSUES close reasons, patch-id re-verify.

Learning and skills

Session-learn cadence	WAS every Stop reread the whole transcript. → NOW memory.session_learn_min_turns (10) and memory.session_learn_min_minutes (120) gate runs; a path+mtime index mines only the delta.
Enforcement ladder	WAS every lesson ended as a prose rule. → NOW reviewers tag enforceable:<lint hook gate type>; promoting one with two or more sources files a single encode chore.
Text pins	WAS rewording a skill sentence could fail a release gate. → NOW tests assert call shapes, files and links; literal substring probes 1,026 → 809.
Vocabulary lint	WAS stock AI phrasing could ship in builtin text. → NOW a word-list lint covers every builtin, with a reasoned allowlist.
cas-why	WAS no workflow for "why was it built this way". → NOW blame, history provenance, tasks and memories feed tiered claims and a coverage map that keeps null results.
Cleanup	WAS search doc_type help omitted spec/artifact; hub-web and slack-bridge carried dead scripts and exports. → NOW both fixed; hub dist is byte-identical.
