What you can do now

02 / 06

Only reply (user)

One conversation

WAS the phone showed only what it sent and what was sent back to it. →

NOW every paired device shows every message and reply, marked with where it came from.

Live on every screen

WAS a message sent from the computer appeared on the phone only after a reload. →

NOW it appears on the phone right away.

Terminal included

WAS what you typed straight into the terminal never showed in Commander. →

NOW it shows as a Terminal turn, without the automatic notices.

Start sessions without re-pairing

WAS allowing session starts meant pairing the device again. →

NOW press Allow starting sessions in Commander and confirm once.

No missing answers

WAS some answers written in the terminal never reached Commander. →

NOW they all do.

Under the hood

03 / 06

Only reply (dev)

History scope

WAS `conversation_history` and the hub relay filtered on `operator_device_id` and `recipient_device_id`. →

NOW every authenticated viewer gets every operator row, project-scoped; receipts still route to the addressee.

Live sends

WAS `MessageQueued` reached only the sender. →

NOW the daemon broadcasts an `OperatorMessage` frame that the hub forwards to other authenticated `pane:read` viewers.

Terminal turns

WAS supervisor `UserPromptSubmit` text was never recorded. →

NOW operator-origin prompts are written as processed `terminal` rows; harness envelopes are rejected on every line.

Mirror	WAS a coordination reply or a thinking-only end_turn suppressed the pane answer. → NOW dedupe is by message content and a turn closes only when final text exists.
Worker default	WAS workers defaulted to gpt-6-sol at medium and ignored llm.worker.*. → NOW the standard lane and stock default are gpt-6.1-sol at high, and llm.worker.* applies to spawns on the configured harness.
Self-grant	WAS session-launch came only from a pairing invitation. → NOW POST /v1/auth/scopes {"add":["session-launch"]} adds it for a device holding pane input, message send and interrupt, audited.
