Cassy v3.82.0

RELEASE REPORT · PUBLISHED 26 OCTOBER 2026 · 7:38 PM ET

Reports and client documents now wear each project's own brand, ready to send.

AREA	CHANGES
Reports	3
Commander	1
Tasks	1

5 changes shipped across 3 areas; Reports has the most, 3.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.82.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Reports	3	Every report, page and note wears the target project's DESIGN.md; `cas deliverable brand` and `cas deliverable finalize`; Feature reports and customer release notes
Commander	1	Commander counts journey use, and QA reads it
Tasks	1	Factory deliveries return to their workers instead of stalling
Total	5	3 areas

Changes shipped

4 added, 1 fixed; tests and docs not counted

13m 46s

Green to published

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.82.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1377 or the CHANGELOG section references it and it closed between the PR opening (5:53 PM ET) and 15 minutes after its merge (7:39 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

Branded documents

Your project's look, every time

WAS

A report, page or note could fall back to a generic style when nobody asked for branding.

NOW

Every one starts from the project's design file, and a project without one gets one first.

Client brand, never ours

WAS

A client document could silently wear our default colours and fonts.

NOW

It uses the client's own colours, fonts and logo, and stops with a clear message if the client has no design file.

Ready-to-send files

WAS

Screenshots, printing and the final checks were separate manual steps.

NOW

One step builds a single file with its screenshots inside, plus A4 and Letter PDFs that are checked page by page.

Nothing internal reaches a client

WAS

Ticket codes or behind-the-scenes words could slip into a client document.

NOW

A client document containing them is refused and not saved, with each offending line named.

Feature reports

WAS

Asking for a feature report had no dedicated format.

NOW

It produces a branded report with real before and after views of the change.

Customer release notes

WAS

Release notes for a client were the same Slack notes written for the team.

NOW

Each client gets its own branded notes as a web page and a PDF, written in their words.

Commander and checks

Usage you can measure

WAS

Which Commander screens people use most was a guess.

NOW

Commander counts how often each main action happens, without any message content, and shares the counts only with your own paired machines.

Watch what matters after a release

WAS

The post-release check listed affected screens in no particular order.

NOW

It names the most-used affected screens first.

Smoother deliveries

Conflicts come back to their author

WAS

A finished change that clashed with other work could sit stuck.

NOW

It returns to the person who made it, naming the clashing files.

Quieter waits

WAS

Someone waiting on an answered question could keep raising the same alert.

NOW

Once that question is answered, the alert stays quiet until a new question comes up.

03 / 06

Under the hood

Deliverables core

Design file first

WAS

Craft and report skills each restated their own styling fallback.

NOW

One design-spec rule, linked from every reader and the close gate, sends all output through the project's design file; tasks record `design: <path>@<revision>`.

`cas deliverable brand`

WAS

The release renderer read only a root design file with CSS `source:` + `maps:`, so design-spec value keys silently got Petrastella defaults.

NOW

The profile's `design:`, the file nearest `--surface`, root, a single nested one, `inherits:`, then value keys; customer audience exits 1 instead of defaulting.

`cas deliverable finalize`

WAS

Fill, inline, hygiene, print and check-pdf lived in separate skill scripts.

NOW

One verb runs them in order, with a 120 KB per-image budget that drops lowest-priority pairs whole, audience hygiene and A4 + Letter check-pdf; exit 0/1/2.

Refused output is never written

WAS

A refused deliverable could still be left at the output path.

NOW

HTML and PDFs are built in a private workspace and moved into place only on pass; the receipt's `html` is null on refusal.

Release and SOW reports switched

WAS

The release report shipped its own token code and the SOW skill its own print and inline scripts.

NOW

Both render through `finalize`; `cas release report` gains `--audience`, `--pdf` checks A4 and Letter (PyMuPDF required), and `check-sow.py` keeps only `gap`.

Front-end skills

WAS

Feature reports and customer notes had no front-end on the core.

NOW

`cas-feature-report` and `cas-customer-release-notes` ship with contracts and templates; `cas-release-notes` hands customer notes off.

QA and Commander

Usage ledger

WAS

Journey traffic shares were estimates.

NOW

Commander posts per-day action counts to paired hubs (max per device/day/action), and `cas qa journeys --traffic [--days N] [--write]` turns them into shares.

Post-release watch order

WAS

The post-release check listed affected journeys unordered.

NOW

It names them highest traffic share first, display only.

`[qa.capture]` config

WAS

QA capture settings had no typed home.

NOW

Typed keys for target or serve command, shots, viewports, masks, budgets and an anchored login whose credentials come from a named environment variable.

Factory

Conflict and upkeep return

WAS

A parked delivery stuck on a merge conflict or a post-merge upkeep gate waited for manual rescue.

NOW

`request_changes` returns it Open to its assignee with the conflicting paths or gate text and one notice.

Answered blocker quieting

WAS

Repeated blocker and idle alerts woke after an answer, and unrelated pings could silence them.

NOW

Only `kind=answer` or a reply to the blocker records ownership; alerts re-arm on a new question or hold.

3.81 follow-ups and `gc_report` paging

WAS

Declined lanes re-alerted, a parked anchor could advance past origin, and `gc_report` pages skipped rows while host scans changed.

NOW

Declined lanes settle until refs change, anchors stay on origin, and host scans render after store inventories.

Evidence and scope

Retrieved: 26 October 2026 · 7:46 PM ET.

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-26-v3.82.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.82.0; retrieved 26 October 2026 · 7:46 PM ET.

Release PR: https://github.com/Richards-LLC/cassy/pull/1377 (`https://github.com/Richards-LLC/cassy/pull/1377`) (merged 26 October 2026 · 7:24 PM ET).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.82.0 (`https://github.com/Richards-LLC/cassy/releases/tag/v3.82.0`).

Release receipt: `release-latency.receipt` from `scripts/release-latency-receipt.sh v3.82.0`, kept with the release run's artifacts.

Installation: the Linux host installed v3.82.0 at 7:39 PM ET through install-on-publish, 63 seconds after publication. macOS host pending manual update.

Publication: two merge-queue ejections preceded the merge (two missed checks, repaired in one batch; then a flawed journey-test probe, fixed). The first publish attempt hit a GitHub API error creating the release, and the retry published it at 7:38 PM ET.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

No source warnings.
