What you can do now

02 / 06

Only reply (user)

Updates finish with linked account configs

WAS if a Claude or Codex account's config file was a link to a shared file, `cas update` refused it and skipped the skills refresh in every project. →

NOW it updates the shared file through the link, keeps the link and its permissions, and finishes in every project. A broken or unsafe link is skipped with a warning that names it.

Each session shows its own conversation

WAS every session of a project opened onto the same old Commander conversation, so live sessions looked like copies of a stale one. →

NOW a session shows only its own messages. Earlier sessions appear in a labelled, collapsed section, and a session with no messages yet says so and shows what it last did.

Sessions are easier to tell apart

WAS several live sessions of one project looked alike. →

NOW they are grouped under the project, with the most recent one marked and each row's last activity shown. You can end a session from Commander after confirming.

Under the hood

Only reply (dev)

Symlinked profile migration

WAS the Violet retirement read profile configs through the symlink-refusing reader, and its error propagated through `retire_installed_hub` into the update and sync skills phase, failing all projects plus the user-level store. →

NOW profile config and skills paths are canonicalized and must resolve inside `HOME` or an explicit `CLAUDE_CONFIG_DIR/CODEX_HOME`. Shared targets are deduplicated and edited once through an atomic temp-and-rename that keeps the link. Dangling, cyclic, out-of-root, unparsable or directory paths become per-file warnings.

Config permissions kept	WAS the atomic writer created replacement files with default permissions. → NOW it copies an existing file's mode, so a 0600 credential config stays 0600.
Session-scoped Commander history	WAS conversation history was project-wide, so every session of a project returned the same rows. → NOW history binds to the requesting factory session. Earlier sessions arrive as separate read-only sections, and the catalog carries last-activity, most-recent and end-session data per live session.
