## Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.15.0 CHANGELOG. Dots count changes, not their size or importance.

| AREA | CHANGES | WHAT CHANGED |
|---|---|---|
| Sessions | 2 | Supervisor context clear explains a skip; Green frozen trains wake their supervisor again |
| Tasks | 7 | Keep failed merges off the shared target; Close epics after their branch is retired; Carry report proof through release closeout; Keep target journeys out of a delivery's overview findings; Read release reviews across machines; One purged task no longer fails every release issue; Approved epic merge attribution |
| Releases | 4 | Complete late park refusals; Show actual release closeout results; Release closeout membership; A blocked Git probe can no longer hang `cas release installed` |
| Total | 13 | 3 areas |

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-11-v4.15.0-slack.md`, GitHub `Richards-LLC/cassy` release v4.15.0; retrieved 11 November 2026 · 8:10 AM ET.

**13**
**Changes listed**
13 fixed; tests, docs, known limits and upgrade notes not counted

**4**
**GitHub issues closed**
Closed from PR #1796 opening to 15 min after merge

**3m 59s**
**Main to published**
Met the 20m budget; merged release to GitHub publication

**14h 4m 28s**
**First child to main**
Missed the 30m budget; first child commit to merged release

| 1 | 4m 26s |
| --- | --- |
| **Queue runs** | **Green to published** |
| One merge-queue run proved the final tree | Within budget (20m 0s budget); Merge-queue CI completion to publication |

Changes and GitHub issues are counted separately. A change is one titled entry in the v4.15.0 CHANGELOG section; entries under Test, Doc, Known limits, Upgrade, Migration or Operator guidance headings are listed under the hood but not counted. A GitHub issue counts when release PR #1796 or the CHANGELOG section references it and it closed between the PR opening (7:43 AM ET) and 15 minutes after its merge (8:17 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. The timing receipt records no blockers and zero interventions; these zero figures are omitted above. It does not measure post-publication installation or cleanup. Those operations encountered the production limitation below. Not measured for this release: request to published, cut to published, lesson recurrence.

# What you can do now

## Update deadlines and release cleanup changes

### Updates don't hang

| WAS | NOW |
| --- | --- |
| on a Mac, one stuck project check held an automatic update for 4 hours 40 minutes, so the next release never installed. | the shipped code stops that check after 10 seconds and falls back to its directory walk. This does not prove the complete update finished: pending release cleanup blocked installation on one production Mac. |

### Release cleanup says what really happened

| WAS | NOW |
| --- | --- |
| a release whose work was all held could look finished. | the shipped notice separates what closed, what was already closed, what is held and what is left, with counts. The new cleanup behavior has not yet had a valid production test. |

### One missing record no longer stalls a release

| WAS | NOW |
| --- | --- |
| a single deleted task made a whole release fail to close its fixed issues. | the shipped code reports that one task on its own instead of failing the whole run. Production validation remains pending. |

### Cleanup works across both machines

| WAS | NOW |
| --- | --- |
| release cleanup could not read a review published on the other machine. | the shipped code downloads and verifies the review wherever it was published. Production validation remains pending. |

# Under the hood

## Release changes

### Explain a skipped context clear

WAS
an oversized wake could skip a context clear without explaining why.

NOW
one quiet explanation records the skip when the latest call remains below the context threshold.

### Train CI wake

WAS
the observer ran the train CI script from the checkout's working tree, so an older checkout failed every scan silently and a green frozen train got no ready-to-cut wake.

NOW
it runs the script from the train tip.

### Install hang

WAS
`git rev-parse --show-toplevel` had no deadline inside `cas release installed`, and a blocked Git child under the LaunchAgent held it for 4h40m.

NOW
the probe stops after 10 seconds and falls back to the directory walk.

### Release closeout

WAS
unstarted descendants created missing-anchor obligations, one purged quarantined task failed issue reconciliation for all 33 deliveries, and report proof was lost between cut and close.

NOW
membership ignores unstarted work, a missing row fails only its own outcome, and report bindings are checked before freeze.

### Merges and closes

WAS
a failed push left the shared target moved, late park refusals were cut off, and conflict repairs were blamed for the target's journeys.

NOW
merges publish from a detached checkout against the observed origin SHA, late refusals list every gate, and overview findings cover only the delivery's own journeys.

### Epics

WAS
a shipped epic could not close once its branch was deleted, and an approved epic merge parent was refused at close.

NOW
the default branch proves shipped children, and a supervisor-approved merge parent is measured at its pushed tip.

### Production validation remains pending

At 8:07:23 AM ET, the publishing machine reconciled v4.15.0 using the older v4.14.0 binary before installing the new release. It reported 43 members and 41 residuals, with the same failure classes as v4.14.0. Those counts do not test the fixes in v4.15.0. On the other Mac, a pending v4.14.0 reconciliation blocked installation of v4.15.0. Issue #1798 (https://github.com/Richards-LLC/cassy/issues/1798) tracks installing first and replaying pending reconciliations with the newest binary. No production success is claimed for release cleanup.

# Evidence and scope

Retrieved: 11 November 2026 · 8:10 AM ET.

Each change is placed in a product area by the words in its title, then its text; a change that matches no area is listed under Other.

Release PR: https://github.com/Richards-LLC/cassy/pull/1796 (https://github.com/Richards-LLC/cassy/pull/1796) (merged 11 November 2026 · 8:02 AM ET).

Release-notes draft: release source (https://github.com/Richards-LLC/cassy/blob/a619386d1e3df1bd5ffffdb28f6fcfe2458959dc/docs/release-notes/2026-11-11-v4.15.0-slack.md). Posted User thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794402468277749) and Dev thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794402478257749).

CHANGELOG source: published CHANGELOG (https://github.com/Richards-LLC/cassy/blob/a619386d1e3df1bd5ffffdb28f6fcfe2458959dc/CHANGELOG.md).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v4.15.0 (https://github.com/Richards-LLC/cassy/releases/tag/v4.15.0) (published 11 November 2026 · 8:06:45 AM ET).

Release receipt (relative to ~/.cas/artifacts): `release/v4.15.0-latency/release-latency.receipt`.

Published identity: annotated tag `ecd513972b9b040bbd6e9f66040e8262483db86c` points to shipped commit `a619386d1e3df1bd5ffffdb28f6fcfe2458959dc`; version-preparation commit `7408f5861` is not the release landing. Publication and all three asset digests were re-read from the GitHub API (https://api.github.com/repos/Richards-LLC/cassy/releases/tags/v4.15.0) at 8:09 AM ET.

Validation: one merge-queue run (https://github.com/Richards-LLC/cassy/actions/runs/43023065747) proved the final release tree. This document does not claim unmeasured application journeys, installation success or release cleanup success. The production observation above comes from the release owner's 8:10 AM ET receipt on 11 November 2026, and issue #1798; it used the prior binary. No before/after capture pairs were supplied, so none are invented.

Timing endpoints: first child commit to main landing is 50,668 seconds against 1,800 (missed); main landing at 8:02:46 AM ET to GitHub publication at 8:06:45 AM ET is 239 seconds against 1,200 (met). Queue green at 8:02:19 AM ET to publication is 266 seconds. These are separate intervals.

## Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.
