What you can do now

02 / 06

Only reply:

Formatted replies

WAS bold, bullets and code arrived as raw symbols in one paragraph. →

NOW the hub renders them as real formatting, in live replies, replayed history and pinned questions; list previews stay plain.

Short answers

WAS a status question could get a thousand-character essay. →

NOW Cassy answers first, then a few one-line bullets with the decision in bold, unless you ask for detail.

Talk to type

WAS a wide "Tap to talk" button squeezed the text box to a sliver. →

NOW a small mic that lights while listening; tap again and your words land in a roomy text box to review before sending.

History that shows up

WAS reopening a conversation could show nothing and a "waiting" label. →

NOW the hub asks every current machine for the thread on open, labels an idle pane "No activity yet", and records enough to trace any reply that still goes missing.

Under the hood

03 / 06

Only reply:

Renderer

WAS paragraphs() split on blank lines. →

NOW hub-web/src/markdown-renderer.ts builds bold, italic, inline/fenced code, one-level nested lists, headings-as-lead-lines and https-only links as DOM nodes; XSS fixtures keep script tags, entities and javascript: links literal (PR #930).

Reply contract

WAS no guidance on phone replies. →

NOW cas-supervisor/references/operator-reply.md on all three harness catalogs, pointed to from the Commander-row inbox framing; pinned by tests inside the SessionStart headroom floor.

Composer

WAS text button, standing status line. →

NOW icon-only mic with aria-pressed, caret-anchored transcript insert, unsupported/denied states on the control; field ≥60% of a 390px row; keyboard-safe layout retained.

History	WAS request only when the Welcome capability list survived the relay; "waiting" for undated activity. → NOW request on protocol ≥3, bounded hub tracing of forwarded requests and relayed response counts, "No activity yet".
Release train	WAS ten recorded interventions per cut. → NOW merge-queue query shape validated with jq, env-file scratch base with the gate's mount rule, Zig directory link, prep version bump, publish ff-only, post-publication workflow wait plus receipts, announce.receipt thread ids, receipts mergeability wait, enqueue retry and idempotent resume; 162 self-test rows (PR #931). Generators emit lint-clean Markdown and the checkout-dependency guard derives its fixture list from the test tree (PR #929); the report poster picks the machine's registered MechaCassy token (PR #932).
Assets	WAS n/a. → NOW cas-x86_64-unknown-linux-gnu.tar.gz ee485e4a9e29f741556ebdf0baa2a8202e4ba9ffcd0d175e09561975f10f01bd; cas-aarch64-apple-darwin.tar.gz 41e99d4fd9ddb92e2f2f93b1c04bccca304fe13748ad2cd4f48d179cf98197e4.

GitHub issue theme assignment uses labels first, then the keyword table in the CLI. Any issue classified as Unclassified is shown in the map so a human can correct the Markdown before rendering.
