cas-src v3.70.0 RELEASE REPORT · PUBLISHED 21 OCTOBER 2026 · 8:01 AM ET

Cassy shows what a change touches and keeps your project docs current.

AREA	CHANGES
Commander	1
Tasks	2
Releases	1

4 changes shipped: 1 in Commander, 2 in Tasks and 1 in Releases.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.70.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Commander	1	Machine hub settings follow the host
Tasks	2	Adaptive QA picks the journeys a change touches; Adaptive QA plumbing
Releases	1	Release-notes draft lint matches the Slack hub
Total	4	3 areas

Changes shipped

1 added, 2 fixed, 1 internal; tests and docs not counted

38m 48s

Green to published

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.70.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1327 or the CHANGELOG section references it and it closed between the PR opening (11:53 PM ET) and 15 minutes after its merge (7:37 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. Not measured for this release: blocked stages, manual interventions, request to published, cut to published, lesson recurrence.

What you can do now

Checks that follow your change

Re-checks chosen for you

WAS
after a change, someone had to guess which parts of the product to walk through again.

NOW
Cassy reads what the change touched and lists the user journeys it affects, the proof each one needs and any files no journey covers.

One list of your user journeys

WAS
the paths people take through your product lived only in loose notes, with nothing checking them against the code.

NOW
one list records each journey with its files and tests; Cassy can draft it from your project and flags broken links and gaps.

Docs kept current

WAS
work could finish while leaving the code map or product overview out of date, or add a new journey nobody listed.

NOW
Cassy refuses to hand that work over until the document is updated or a written reason says why it did not need to change.

Warnings first for existing projects

WAS
a new rule like this would start refusing work the day it shipped.

NOW
projects you already have get one release of warnings only; refusals start with the next release, and new projects get them from day one.

A check after each release

WAS
nothing confirmed a release still worked once it went out.

NOW
a project can name a safe, read-only check that Cassy runs a few times in the half hour after release; release notes wait for a clean result.

Fixes

Hub settings reach your machine

WAS

changing a hub setting from inside a project saved it to that project, so the hub on your machine never saw it.

NOW

hub settings always save to your machine's own settings, from any folder.

Release notes checked before posting

WAS

a release note with a very long line passed the pre-post check and was then refused by Slack.

NOW

the check catches lines over 300 characters first, and no longer misreads a two-line item followed by a heading.

03 / 06

Under the hood

Adaptive QA

Journey registry

WAS

journeys lived in prose QA docs with no machine-checkable owners.

NOW

`docs/qa/journeys.yaml` (v1) lists owners, specs and surfaces; `cas qa journeys --check` validates it, `--seed` drafts one and keeps curated entries, and `cas doctor` shows its counts.

Journey impact

WAS

QA selection had no tool behind it.

NOW

`cas qa impact [BASE..HEAD | --files | --stdin | --task]` emits text, Markdown or JSON v1 with journeys, `evidence_required` and unowned files; exit 2 for usage, 3 for read errors.

Impact on parked deliveries

WAS

QA dispatch and ledgers knew nothing of the journeys a delivery touched.

NOW

park stores a Cassy-managed `qa_impact` snapshot; an approved `qa_record` needs a PASS, FAIL, NOT A ROUTE or NOT EXERCISED row for each live journey.

Upkeep gates at park

WAS

a delivery could orphan registry globs, add unowned surface files, or move directories without touching CODEMAP or PRODUCT_OVERVIEW.

NOW

G1–G3 (registry) and G5/G6 (CODEMAP, overview) refuse at park unless the delivery updates the document or records a decision escape.

Staged adoption

WAS

a new gate applied to every project at once.

NOW

`cas init` and `--seed` select `enforce`; an existing project's first `cas update` writes `observe` for `upkeep.*` and `qa.registry.enforce`, promoted on the next release unless pinned.

Post-release check

WAS

no signal after a release landed.

NOW

`[qa.post_release]` runs a read-only command under `cas serve` at about +0/+15/+30 min; pending or failed receipts hold release-note posts and epic close. Unconfigured projects are unaffected.

Retired features gate

WAS

close checked `docs/qa/features` Touches globs with a `map unchanged:` escape.

NOW

that gate is gone; the registry gates replace it.

Fixes

Host-scoped hub config

WAS

`cas config get|set|reset hub.*` followed project discovery, so a value set in a project never reached the hub.

NOW

those keys and `list --section hub` resolve to `~/.cas/config.toml` before discovery; `CAS_ROOT` and `--store` no longer redirect them.

Announce lint line limit

WAS

`release-train-announce.py` passed lines the Violet hub refuses as `long_line`.

NOW

`--validate` and `--lint` refuse any line over 300 visible characters, counting `<url|label>` as its label.

Announce lint bullet span

WAS
a two-line bullet followed by a bold section heading counted as three lines.

NOW
a bullet ends at a blank line, the next bullet or a heading line.
