## Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.20.0 CHANGELOG. Dots count changes, not their size or importance.

| AREA | CHANGES | WHAT CHANGED |
|---|---|---|
| Sessions | 6 | Automatic peer evidence download; Quiet intentional waits; Peer landing status notices; Return from historical checkouts; Complete saved plans after resets; Release review without a live session |
| Tasks | 3 | Current shared release selection; Reviews survive unrelated registry edits; Fully reviewed releases can be cut |
| Releases | 1 | Accurate version matching |
| Total | 10 | 3 areas |

**10**

**Changes listed**

10 fixed; tests, docs, known limits and upgrade notes not counted

**1**

**GitHub issues closed**

Closed from PR #1873 opening to 15 min after merge

**10m 13s**

**Main to published**

Met the 20-minute budget: PR merged on main to GitHub release publication

**13h 45m 10s**

**First child to main**

Missed the 30-minute budget: oldest included child commit to PR merge; measures train age

**10m 39s**

**Green to published**

Met the 20-minute budget: merge-queue CI completion to publication

**1**

**Queue runs**

One queue run, 43273648014

Changes and GitHub issues are counted separately. A change is one titled entry in the v4.20.0 CHANGELOG section; entries under Test, Doc, Known limits, Upgrade, Migration or Operator guidance headings are listed under the hood but not counted. A GitHub issue counts when release PR #1873 or the CHANGELOG section references it and it closed between the PR opening (12:48 PM ET) and 15 minutes after its merge (1:21 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. The first-child timer measures the age of work collected overnight before the release landed, not a build stage. No blocked stage or manual intervention is recorded in the supplied receipt. Not measured for this release: request to published, cut to published, lesson recurrence.

# What you can do now

## Fewer interruptions, nothing lost

### Your saved plan survives a reset

WAS

when a long session reset itself, the end of its saved plan was cut off for good, and day-old notices crowded the summary.

NOW

the whole plan is kept and shown first, old notices fold into one line, and each helper shows whether it is really working.

### Notices from your other machine stop asking for replies

WAS

a note that work had landed from the other machine arrived as a question that asked for an answer.

NOW

it arrives as a status update with nothing to answer, and you still see it right away.

### No false "stalled" alarms

WAS

work that was waiting on purpose, for another task or a paused helper, could raise stall warnings and pages.

NOW

deliberate waits stay quiet until the work can move again.

### Merging work from the other machine no longer stalls

WAS

the check before a merge could stop and wait while someone copied the other machine's evidence over by hand.

NOW

the evidence is downloaded automatically before the check starts.

### No false version-check failures

WAS

a file path that happened to contain the release number could fail the release check.

NOW

only a real copy of the version number counts.

### New work joins the right release

WAS
a new task could be pointed at an old or replaced release train.

NOW
it joins the current shared train, and finished releases tidy up old entries without closing unfinished work.

# Under the hood

## Release changes

### Auto-clear handoff

WAS
merge_judgement clipped the judgement to the section budget before storing it, pending rows were capped at 100 regardless of age, and worker lines used registry status.

NOW
judgement is stored whole and first; worker_idle/task_lifecycle rows older than 60 min collapse to a count and sort last; worker lines carry worker_status liveness.

### Peer landing render

WAS
a bare CAS_PEER_PREMERGE_V1 body fell through to kind=ask with the reply instruction.

NOW
render_prompt classifies it as Status, keeps the wake, and omits the reply line.

### Progress watchdog

WAS
tasks blocked by open dependencies or assigned to held workers produced stall notices and operator pages.

NOW
both are excluded until actionable.

### Peer evidence

WAS
pre-merge review of a peer delivery raised supervisor_call because the evidence lived only in the publisher's artifacts root.

NOW
committed peer artifacts are fetched from Cloud into the local task evidence directory before fingerprinting; local files win and a restored QA ledger no longer self-refuses.

### version-literals row

WAS
the gate matched the release version as plain text, so a Node v24.x path failed pushes (GH #1865).

NOW
whole-version match; suffixed versions such as -rc.1 still fail.

### Default train

WAS
new tasks could target stale or superseded trains.

NOW
shared origin history selects the live train, refuses divergent candidates, and cuts retire stale admissions without closing open work.

### Review retention

WAS

a sibling's independent journey-registry edit invalidated an approval.

NOW

the approval holds while the delivery's hunks and context are unchanged.

### Parent verification

WAS

release reconciliation from an unregistered CLI process held the epic on an agent registration error.

NOW

it requests parent verification under its recorded release identity.

### Worker Git guards

WAS

returning from a detached historical checkout was refused.

NOW

checkout/switch navigation across branch, previous-tip, detach, create and orphan forms is recognised; detached commits, path restores and forced ref rewrites stay guarded.

### Cut gate

WAS

a train whose review and QA receipts had already closed every member was refused as "zero would-close".

NOW

the cut refuses only when members are held or not eligible.

# Evidence and scope

Retrieved: 12 November 2026 · 1:23 PM ET.

Release PR: https://github.com/Richards-LLC/cassy/pull/1873 (https://github.com/Richards-LLC/cassy/pull/1873) (merged 12 November 2026 · 1:06 PM ET).

Published User thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794507502336909) and Dev thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794507504875299).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v4.20.0 (https://github.com/Richards-LLC/cassy/releases/tag/v4.20.0) (published 12 November 2026 · 1:16:52 PM ET).

Release receipt (relative to ~/.cas/artifacts): `release/v4.20.0-latency/release-latency.receipt`.

## Pipeline latency

First child → main: 49,510 seconds against 1,800, missed. Main → published: 613 seconds against 1,200, met. Queue green → published: 639 seconds against 1,200, met. The one queue run is 43273648014 (https://github.com/Richards-LLC/cassy/actions/runs/43273648014).

Endpoints: main landing 12 November 2026 · 1:06:39 PM ET; queue green 1:06:13 PM ET; GitHub release publication 1:16:52 PM ET. Stage timings are unavailable: the receipt has no STAGE_SECS. Request-to-publication and cut-to-publication were not measured. No before/after image pair was available for these changes; the report does not reconstruct one.
