Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.85.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	7	A Codex supervisor that acts on signals, answers and stays quiet; Grok 1.0.70 hooks; Relays held behind a draft are no longer dropped; `worker_status` names the verifier wait; Codex supervisor account carried to spawns; Shared-file warnings name the real worker and task; How to run finish in Codex
Tasks	2	`message_status` matches the delivery watchdog; Approved verification closes a no-code task
Total	9	2 areas

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-28-v3.85.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.85.0; retrieved 27 October 2026 · 10:45 PM ET.

9

Changes shipped

1 changed, 8 fixed; tests and docs not counted

15m 18s

Green to published

Over budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.85.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1413 or the CHANGELOG section references it and it closed between the PR opening (9:28 PM ET) and 15 minutes after its merge (10:38 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

A Codex coordinator that gets on with it

Acts instead of checking

WAS
The Codex coordinator kept waiting and re-checking its inbox inside one long turn.

NOW
It acts on each update as it arrives and stops when nothing needs doing. Cassy wakes it for the next one.

Remembers how to work

WAS
Each time its conversation was condensed, it re-read its instruction files from the start.

NOW
A short built-in playbook stays with it, so it carries straight on.

Fewer messages

WAS
It replied to almost every status update, which set off more back-and-forth.

NOW
It replies only when someone needs an answer, an action or a decision.

No running commentary

WAS
It announced each step, and which instructions it was using, before acting.

NOW
It stays quiet while it works and answers your status questions directly.

Your voice

WAS
On Codex, the tone and style you set in your own instruction file were overruled.

NOW
Your own instructions set the voice for Claude, Codex and Grok coordinators. Cassy's rules still set content and length.

Fixes

Grok works with Cassy again

WAS
Under Grok 1.0.70, every Cassy check failed on every step, so none of Cassy's protections ran.

NOW
Grok 1.0.70 runs Cassy's checks normally.

Your unsent text is safe and messages wait

WAS

While you had unsent text in a Codex coordinator's input box, waiting messages were dropped after 15 minutes and work stalled for 90 minutes or more.

NOW

They wait without touching your text and go through once the box is clear. You get one alert after 9 minutes.

Honest delivery status

WAS

The message status view promised retries and alerts that had not happened.

NOW

It shows the retries and alerts Cassy actually recorded.

Approved checks finish the job

WAS

An approved review of a task with no code change could leave the task open.

NOW

The approval completes the close. The status view says when a task is waiting on its reviewer, instead of asking you to nudge anyone.

Codex logins carry through

WAS

A Codex coordinator started on a second Codex login could not start helpers without naming that login again.

NOW

Helpers start on the same login unless you choose another.

Clearer shared-file warnings

WAS

A warning about a file someone else was editing showed an internal code and pointed you to the wrong person.

NOW

It names who is editing the file and what they are working on, and who to ask.

Finishing a Codex session

WAS

Typing `/finish` in Codex did nothing, and nothing said what to type instead.

NOW

When a Codex session starts, it tells you to type `$finish` or say "finish" to wrap up.

Under the hood

Supervisor contracts

Act on the signal

WAS

`CODEX_SUPERVISOR_INSTRUCTIONS` lacked "Act on the injected signal; do not poll", and Codex looped on sleep plus `inbox_poll` (7.6/h against 0.2/h on Claude).

NOW

The Codex contract carries it, plus "end the turn when nothing is actionable". The `act-on-injected-signal` element is required in every supervisor launch shape.

Resident core

WAS

The contract pointed at two skills, which Codex re-read through the shell after every compaction (8.1 reads/h against 0.8).

NOW

A signal → action core lives in `developer_instructions`, which Codex keeps across compaction. The checklist is startup-only, within a 6,500-byte test budget.

Reply only when needed

WAS

The contracts said to reply to every update, and Codex sent 9.8 messages per merge against 2.6.

NOW

The Codex, Claude and Grok contracts carry `reply-only-when-needed`: reply for an answer, action or verdict, never to acknowledge a receipt or status.

Commentary policy

WAS

Codex base instructions require commentary before tool calls and on skill use, and "Skip preamble" did not name that channel.

NOW

The Codex contract keeps commentary silent on triage turns, allows one line before a step over 2 minutes, and bans skill announcements.

Voice precedence

WAS

Codex sends the user-level instruction file as a user-role message below the developer-role contract, so "facts, not narration" won.

NOW

The `user-instructions-voice` element in the Codex, Claude and Grok contracts hands voice and style to the user's own instruction file.

Fixes

Grok 1.0.70 hook payloads (#1410)

WAS

`HookInput` used serde aliases, so a payload with both `hook_event_name` and `hookEventName` failed as a duplicate field.

NOW

All 16 aliased fields accept both spellings and prefer snake_case, including an explicit null. A captured 1.0.70 payload is a test fixture.

Dirty-composer relays (#1400)

WAS

`DeferredComposerDirty` stamped a `GatedNotReady` retry, spending the 120-attempt, 900-second budget until the relay was abandoned.

NOW

It parks with `ParkBusy` and a 2-minute recheck. `worker_status detail=true` lists every held relay with age, next recheck and alert ID.

Delivery status (#1383)

WAS

`message_status` hardcoded a 60-second re-wake and the raw configured threshold, and inferred alerts from age.

NOW

Status and watchdog share `delivery_attempts` and `next_attempt_at`, use the capped watchdog threshold and cite `channel_stalled_notice_id`.

Approved no-code close (#1388)

WAS

`queue_approved_verification_close_retry` skipped tasks not InProgress or AwaitingMerge, so a Blocked verification wait got no retry.

NOW

A task Blocked only by the current cycle's wait note for the approved dispatch gets the retry. Receipts name the real skip reason.

Verifier wait in worker_status (#1381)

WAS

A merged delivery with a pending dispatch read "WAITING ON WORKER".

NOW

It reads "WAITING ON VERIFIER" with the dispatch, owner and deadline, and "Do not message the worker to close."

CODEX_HOME reaches MCP (#1390)

WAS

The Codex-injected Cassy MCP server lacked the pane's `CODEX_HOME`, so `spawn_workers` without `config_dir` checked the default Codex login.

NOW

The effective `CODEX_HOME` is forwarded as `mcp_servers.cs.env.CODEX_HOME`. An explicit `config_dir` still wins.

Shared-file advisory (#1405)

WAS

The advisory carried a static ticket id and always routed to "the other session's supervisor".

NOW

A same-session holder reads "another worker in your session (name, task)" and routes to your own supervisor.

Codex finish hint (#1402)

WAS

Codex slash commands are not extensible, so `/finish` did nothing and no Codex surface named the working form.

NOW

Codex session-start context (native hooks and MCP startup) adds a budgeted line: type `$finish` or say `finish`. Other harnesses are unchanged.
