Cassy v3.94.0

RELEASE REPORT · PUBLISHED 31 OCTOBER 2026 · 8:19 PM ET

About 26,000 lines removed, a ledger that measures every rescue, help that keeps secrets and merge admission that tells the truth.

22 changes shipped across 6 areas; Tasks has the most, 7, most of them in how work is checked and merged.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one titled entry in the v3.94.0 CHANGELOG. Dots count changes, not their size or importance: the three removals that took out about 26,000 lines are three dots.

AREA	CHANGES	WHAT CHANGED
Sessions	5	Stopped connections cancel pending catalog reads; Supervisors can rate a feature in one line; TUI pop-up notification settings retired; Retired factory and close aliases; Unused internal code removed
Tasks	7	Renumbered migrations close normally; Rapid creates use one collision-resistant generator; Factory merges report missing code validation accurately; Pending tip CI holds a code merge when the code commit has no runs; Builtin test guidance names six measured bad-test patterns; Proof claims name what ran; Parallel resting captures
Releases	5	Retired local release train; Every check and supervisor rescue is measured; `cas ledger report --release vX`; Published receipts feed the friction ledger; Aborted rows finish child cleanup
Memory	2	Per-turn memory cards retired; Unused recording index tables dropped
Slack and Cloud	2	Fleet-wide over Cloud, metrics only; Cloud login instructions
Safety	1	Secret environment values stay out of help
Total	22	6 areas

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-31-v3.94.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.94.0; retrieved 31 October 2026 · 8:21 PM ET. Product-area assignments are editorial; the release and titles are preserved.

Tag to tag, v3.93.0 to v3.94.0; 8,157 added, so 24,494 fewer lines in the tree

2h 1m 22s

Release PR open to merged

PR #1446 opened 6:01 PM ET, merged 8:03 PM ET; one queue ejection, repaired in one cycle

16m 14s

Main to published

20-minute target; 3m 46s under

16m 26s

Queue green to published

20-minute budget; 3m 34s under

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.94.0 CHANGELOG section. Areas are assigned editorially in the generator's stable order, and empty areas are omitted: Tasks holds closing, ID creation, merge admission and test discipline; Releases holds the retired release train and the friction ledger's measurement and report. About 26,000 lines is the sum of the three large removals as measured by their deliveries (about 7,700, 8,400 and 9,500); the tag-to-tag diff deletes 32,651 lines because it also counts smaller edits. A GitHub issue counts when release PR #1446 or the CHANGELOG section references it and it closed between the PR opening (6:01 PM ET) and 15 minutes after its merge (8:18 PM ET); none did. Publication raised no blocker and needed no manual intervention. Not measured for this release: request to published, cut to published, per-stage times and lesson recurrence.

The release PR opened at 6:01 PM ET and merged at 8:03 PM ET, 2 hours 1 minute 22 seconds later, after one queue ejection. The first queue run failed at 6:27 PM ET: a verifier document was over its 15 KB budget and a daemon test still expected the old call count. One repair commit at 6:32 PM ET fixed both, and two test-fixture fixes followed before the release re-entered the queue at 7:49 PM ET and went green at 8:03 PM ET; about 82 minutes sat between the ejection and the second entry. Publication then took 16 minutes 14 seconds from main, inside the 20-minute target but more than five times v3.93.0's 2 minutes 59 seconds. v3.93.0 took 19 minutes 46 seconds from PR open to merged on a single queue pass.

02 / 06

What you can do now

Sessions and Commander

Quieter sessions

WAS

Every prompt and tool step carried automatic memory cards that almost nobody used (5 uses in about 39,500 injections).

NOW

Those cards are gone. Saved handoffs, memory search and related context on new tasks still work. In release QA, a session started on a copy of the real project store still opened with its saved handoff and no recall cards.

Steadier connections

WAS

Replacing a machine's connection could leave the old one sending one late request.

NOW

Stopping or replacing a connection cancels everything it had in flight.

Help text keeps secrets secret

WAS

Showing help for login or the bridge server could print a token that was set in your environment.

NOW

Help names the setting but never shows its value.

Correct login instructions

WAS

Some errors told you to run a login command that does not exist.

NOW

They name the real command, `cas login`.

Measuring what helps

Friction you can see

WAS

There was no record of manual rescues, release timing or which features were noise.

NOW

Cassy records checks, rescues, escapes and releases, and each session can rate a feature in one line. `cas ledger report` shows it, and projects share metrics, never code, through Cassy Cloud. On a copy of the real project store, the first run turned existing history into 2,610 events, and a second run added none.

Fewer settings that did nothing

WAS

`cas config` listed 16 pop-up notification settings that changed nothing, because the pop-ups never ran.

NOW

Those settings are gone. A config file that still sets them loads normally, prints one note naming them and drops them on the next save.

Under the hood

Removed

Ambient recall

WAS

Per-turn recall injection across every harness.

NOW

Removed (about 7,700 lines); handoffs, explicit search and task-create context kept. The installed 3.93.0 binary carries the recall producer string once; the release candidate carries it zero times.

Dead subsystems

WAS

A never-enabled notification pipeline, a recording index nothing wrote, a second factory session manager and dead search modules.

NOW

Removed (about 8,400 lines); a forward migration drops the six empty tables, and retired notification keys still load. On a 1.76 GB copy of the real store, the first open applied migrations 289 and 290 in 1.1 s, left no recording tables and passed `quick_check`; a second open changed nothing.

Release train

WAS

The pre-3.54 release train and its lane checkers.

NOW

Removed (about 9,500 lines); release-cut lessons now follow the one-command release, proven by a whole-path release dry run.

Expired aliases

WAS

Factory actions still ran through `coordination`, and the `bypass_code_review` close alias still worked. In 3.93.0, `coordination action=worker_status` ran and added a deprecation note.

NOW

Both are refused with an error that names the live route: "Factory action `worker_status` is available only through the factory tool: `mcp__cas__factory action=worker_status`".

Fixed

Merge admission

WAS

A failed change classifier read as red CI, and a code commit with no runs of its own was admitted while the tip's CI was still pending.

NOW

Missing code CI reads as unconfirmed, with the run link, and a pending covering run holds the merge.

Close gate

WAS

A file renamed inside its own delivery read as dropped content.

NOW

Measured against the delivery's net tree; real drops are still refused.

Store IDs

WAS

The collision fix lived in one of four id generators.

NOW

One shared generator for tasks, skills, specs and code. A burst of 15 task and 3 spec creates in one server session gave 18 distinct IDs.

Release gate

WAS

An aborted row could leave Cargo children running.

NOW

Cleanup terminates and reaps the whole tree, with bounded escalation.

Secrets in help

WAS

`--help` showed env values for the Cloud and bridge tokens.

NOW

Hidden, with a sentinel test.

Added and changed

Friction ledger, phase 1

WAS

Interventions, escapes and feature value were reconstructed by hand after each session.

NOW

Append-only `quality_events` (check runs, interventions, escapes, releases, feature feedback), batched sync to Cloud's team quality-events endpoint (metrics, titles and links only), and `cas ledger report --release vX`. Update and delete on the table abort.

Test hygiene

WAS

Test guidance warned against sleeps only, and a subset run could be reported as the full suite.

NOW

Builtin test guidance names six measured bad-test patterns, proof claims must name what ran, style-pinning and copied-logic tests are gone, and slow tests use injected clocks.

CI coverage

WAS
16 script and visual-QA suites never ran in CI, and visual QA captured one page at a time.

NOW
They run when their inputs change, and visual QA captures up to three pages at once.

Evidence and scope

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-31-v3.94.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.94.0; retrieved 31 October 2026 · 8:21 PM ET.

Area groupings are editorial (see the counting note); every CHANGELOG title is preserved.

Release PR: https://github.com/Richards-LLC/cassy/pull/1446 (https://github.com/Richards-LLC/cassy/pull/1446) (opened 31 October 2026 · 6:01:51 PM ET, merged 8:03:13 PM ET; merge commit f862f92cda0f41d703573a21774a69fe6ebf5de7).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.94.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.94.0) (published 31 October 2026 · 8:19:27 PM ET; tag object 7648fb96351bb0136a718a6cca1223850ccc99a5 on commit f862f92; Release run 41255040336).

Release commit: `c4345de93` (`release: v3.94.0`), committed 31 October 2026 · 6:01:48 PM ET.

Merge queue: first run CI 41246801444 (6:08:18 to 6:27:31 PM ET) failed in Fast Validation suite shards 1 and 2. Repair commit `962ddda31` (6:32 PM ET) brought the verifier body back under 15 KB and taught the team-only daemon test to count the quality-ledger pull; `c375aa2cd` and `e3f0d5d4b` regenerated the derived verifier copies. `e5d530f30` (6:52 PM ET) and `4d47d5fec` (7:06 PM ET) fixed two test fixtures: a terminal proof that inherited an ignored interrupt signal and a release script client that could miss a reply sharing one write. Second run CI 41254102091 (7:49:16 to 8:03:01 PM ET) passed.

Lines removed: `git diff --shortstat v3.93.0 v3.94.0` reports 358 files changed, 8,157 insertions and 32,651 deletions. The per-removal sizes (about 7,700, 8,400 and 9,500) come from the release-notes draft.

Release QA: batch QA round 17 walked the release candidate at board tip d35931ee (30 cells: 29 pass, 1 not exercised) against the installed 3.93.0 as the before binary, in scratch homes and on a read-only copy of the real project store. Its captures are command and hook output, not screenshots, so this report quotes them in the Was and Now text above and shows no image pairs. Merge admission could not be exercised in a scratch home; its first live run is the supervisor's next merge.

Release receipt: the standalone `release-latency.receipt`, kept with this report's proof under the Cassy artifacts root.

Pipeline latency

Command: `scripts/release-latency-receipt.sh v3.94.0 --budget-seconds 1200 --run-dir <task-proof>/latency`. Merge-queue green (CI run 41254102091) at 8:03:01 PM ET to publication at 8:19:27 PM ET is 986 seconds (16m 26s), inside the 1,200-second budget. Main landed at 8:03:13 PM ET, so main to published is 974 seconds (16m 14s). Release PR #1446 opened at 6:01:51 PM ET and merged at 8:03:13 PM ET: 7,282 seconds (2h 1m 22s), including one queue ejection. The receipt records zero interventions, no blockers and no per-stage seconds. Neither value stands in for another.

No source warnings.
