cas-src v3.80.0 RELEASE REPORT · PUBLISHED 26 OCTOBER 2026 · 10:11 AM ET

Cassy 3.80 shows which Slack wake-up listener a running session uses and checks the Slack channels in your settings.

AREA		CHANGES
Tasks	●	1
Slack and Cloud	●●●	3
Other	●	1

5 changes shipped across 3 areas; Slack and Cloud has the most, 3.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.80.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Tasks	1	Epic close verification target
Slack and Cloud	3	Running daemon's Violet consumer in status and doctor; Violet consumer receipt writes; Configured Slack channel diagnostics
Other	1	Terminal QA backspace and repeated carriage returns
Total	5	3 areas

Changes shipped

2 added, 3 fixed; tests and docs not counted

4m 11s

Green to published

Within budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.80.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1371 or the CHANGELOG section references it and it closed between the PR opening (9:53 AM ET) and 15 minutes after its merge (10:23 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

02 / 06

What you can do now

Release changes

Slack wake-ups in status

WAS

Status and `cas doctor` could not show which Slack wake-up listener a running session used.

NOW

They show what that session recorded at start, say "unknown" when it recorded nothing, and say when a settings change needs a restart.

Slack channel checks

WAS

`cas doctor` did not check the Slack channels listed in your settings.

NOW

It checks up to 16 of them within 3 seconds, and each new session lists channels that are unchecked, out of date or flagged.

Closing grouped work

WAS

Checking a finished group of tasks could look at whatever happened to be checked out locally.

NOW

It checks the published branch, and accepts the merge that released the work as proof.

Terminal capture checks

WAS

The terminal check tool treated a backspace as deleting text and counted a doubled carriage return before a line end as a redraw.

NOW

A backspace only moves the cursor, and that doubled return is no longer counted.

Under the hood

Violet diagnostics (GH #1267)

Daemon consumer receipt

WAS

Neither `cas factory status` nor `cas doctor` reported the running daemon's consumer id or capabilities.

NOW

Each daemon writes a locked per-session receipt (PID, start time, build, capabilities, wake_enabled at start); a mismatch reads unknown, and a failed write is named only when its failure record matches.

Configured-channel doctor row

WAS

Doctor did not check `slack.channels`.

NOW

Up to 16 configured channels are checked with GETs under a shared 3 s budget that also bounds DNS; an overrun reports unchecked, and the snapshot save is skipped if the deadline has passed when it is reached.

Offline session-start evidence

WAS

Session start said nothing about configured channels.

NOW

It reads `.cas/violet-channel-check.json` with no channel network call and warns on unchecked, flagged or 24-hour-stale channels.

Task close and tooling

Epic close verification

WAS

Epic close proof could bind to the supervisor checkout's HEAD, so unrelated local work could break verification.

NOW

Proof binds to the published origin epic branch (local when unpublished or local_merge); commit_receipt accepts a default-branch merge containing the epic tip.

terminal-qa backspace and CR runs

WAS

Backspace deleted the last cell, and a CR run ending at LF counted as a redraw.

NOW

Backspace moves the cursor left without deleting, and that CR run is not counted.

Evidence and scope

Sources retrieved 26 October 2026, 10:12 AM ET: the CHANGELOG (https://github.com/Richards-LLC/cassy/blob/v3.80.0/CHANGELOG.md) at the v3.80.0 tag, the release draft `docs/release-notes/2026-10-26-v3.80.0-slack.md` with its published checksums and timing filled after publication, and GitHub release v3.80.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.80.0). PR #1371 (https://github.com/Richards-LLC/cassy/pull/1371) opened at 9:53:04 AM ET and merged at 10:08:18 AM ET (15m 14s, with no merge-queue ejection); publication completed at 10:11:57 AM ET, 3m 39s after the merge. Installation on the release host is not recorded in this report.

Changes are grouped by title, then text. Moved by hand: Running daemon's Violet consumer in status and doctor from Sessions to Slack and Cloud, and Violet consumer receipt writes from Tasks to Slack and Cloud (both report the Slack wake-up listener), and Terminal QA backspace and repeated carriage returns from Tasks to Other (a terminal capture tool, as in 3.79). Counts describe changes, not impact.

Merge-queue green (10:07:46 AM ET) to publication took 251 seconds, within the 600-second budget. Published archives were downloaded fresh and matched GitHub's SHA-256 metadata before entering the draft. GitHub issue #1267 is referenced by the CHANGELOG and was still open at retrieval, so it is not counted.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

No source warnings.
