What you can do now

02 / 06

Only reply (user)

Clear pairing status

WAS

when your only paired machine's pairing was revoked, the header said "Needs pairing" but the footer kept saying "Reconnecting", as if waiting would help. →

NOW

every part of the screen, footer included, says "Needs pairing".

Loops start reliably

WAS

starting a loop could fail with a database error when another loop had started at nearly the same moment. →

NOW

each loop gets a unique identifier, so starting one always works.

Tests that catch real problems

WAS

some of Cassy's own checks could pass without testing anything. →

NOW

they fail when something breaks; tightening them is how the loop problem above was found.

Under the hood

03 / 06

Only reply (dev)

Loop ID collisions

WAS

SqliteLoopStore::generate_id kept the last 4 hex digits of the millisecond clock, so two loop_start calls in one millisecond, or IDs a multiple of ~65.5 s apart, hit UNIQUE constraint failed: loops.id. →

NOW

loop- plus 64 random bits, checked against stored rows with bounded retries; existing IDs unchanged.

Revoked-pairing footer

WAS

machineFooterMarkup chose "Reconnecting" from everConnected alone and ignored auth loss. →

NOW

the footer uses the shared machineConnectionLabel; auth-lost rows are excluded from reconnect aggregation.

False-green tests removed

WAS

six semantic-search tests returned before asserting; the cloud-sync CLI e2e was unwired and accepted auth/config failure; PTY smoke tests matched the echoed command; 41 tests for removed CLI commands sat ignored. →

NOW

current-seam replacements with independent assertions, request counts and durable read-back.

Env-guard ownership	WAS 1,066 recorded unguarded env/cwd mutation sites and a private mutex in <code>mcp_tools_test</code>. → NOW one canonical <code>TestEnvGuard</code> held for each test's lifetime; the baseline is 143 sites and <code>check-test-env</code> flags raw mutation under a held guard.
CI and journeys	WAS a <code>stdin-race</code> flake in the scoped-proof inventory, a 121 s network journey built on fixed waits, and a text-matching CI policy script. → NOW a draining checker stub, a protocol-clock journey at 60 s, and parsed CI policy with PyYAML installed into an isolated venv only when missing.

Fixes ledger
