0
Issues closed
GitHub closures in the publication window

5
Changed entries
Plus one Removed and one Fixed; zero Added

16m52s
PR to main
15:30:26–15:47:18 UTC; within 30-minute budget

10m16s
Main to published
Landing to API publishedAt 15:57:34 UTC

52s
Published to installed
API publication to host install at 15:58:26 UTC

28m
PR to installed
Main to installed: 11m08s, within 20-minute budget

Counts are top-level CHANGELOG bullets, separate from themes and GitHub closures. Publication uses the release API; installation uses the host journal. All times are UTC.

▼ Change map · data and reading guide

One filled dot represents one verified closure, never effort or importance. Zero rows deliberately have no marks.

What you can do now

02 / 06

Safer next steps

Wait for results

WAS a change could be combined before its checks finished.

NOW it waits for them, and a later failure raises an urgent alert naming the affected branch.

Check related parts

WAS a change could miss checks in parts that use it.

NOW those parts need their own passing checks before the change is handed over.

Catch release failures sooner

WAS a release could enter the final queue before its first checks finished.

NOW it waits, and a failure names the broken checks and tests.

Questions with a next step

WAS an unanswered question could leave work waiting indefinitely.

NOW it can include a deadline and a default, with a reminder to proceed when time runs out.

Unstick ready work

WAS ready work could sit waiting without an urgent alert.

NOW it raises one when capacity sits idle, while changes still being checked stay out of the ready list.

Under the hood

03 / 06

Validation and compatibility

Merge admission

WAS pending lane CI was advisory for code.

NOW `worktree_merge` refuses it without override, and a red merged commit raises a critical blocker naming its integration branch.

Dependent coverage

WAS blast-radius proof covered changed modules.

NOW direct workspace dependents also need passing targeted-test receipts at the delivered commit.

Release admission

WAS `release.sh` enabled auto-merge immediately.

NOW it waits for Scoped Validation; red or cancelled checks stop with exit 5 and failing check/test names.

Commander deadlines	WAS asks had no deadline or default. NOW `kind=ask` accepts `remind_delay_secs` with `remind_message`, schedules a proceed reminder and returns its cancellation ID.
Ready-work alerts	WAS stalled ready work emitted a routine notice and pending deliveries counted as ready. NOW the notice raises a blocker and excludes deliveries still awaiting CI.
OpenCode configuration	WAS the projection test pinned full prompt text. NOW it checks both agents' modes, models, variants, permissions, non-empty prompts and top-level keys.
Latency checks	WAS tight upper bounds failed on busy runners. NOW injected-latency lower bounds and success assertions remain, with 10-times-RTT upper hang guards.

Download the published Linux x86_64 archive (https://github.com/Richards-LLC/cassy/releases/download/v3.55.0/cas-x86_64-unknown-linux-gnu.tar.gz) or macOS ARM64 archive (https://github.com/Richards-LLC/cassy/releases/download/v3.55.0/cas-aarch64-apple-darwin.tar.gz). Both were built by CI. Fresh downloads matched GitHub's SHA-256 metadata via `scripts/release-published-receipt.sh v3.55.0 --write-draft` before these digests entered the announcement. The soundwave host reports `cas 3.55.0 (033143b 2026-10-15)`.

Evidence and scope

Retrieved 2026-10-15T16:03 UTC. Scope: all seven top-level CHANGELOG entries (five Changed, one Removed, one Fixed) and all corresponding User/Dev draft changes.

- Published v3.55.0 release (https://github.com/Richards-LLC/cassy/releases/tag/v3.55.0): API publication 15:57:34 UTC, both asset digests and install timer.
- PR #1206 (https://github.com/Richards-LLC/cassy/pull/1206): opened 15:30:26 UTC, merged 15:47:18 UTC; commit `033143b50ef775c1c234d73d869439d45087d4de`.
- Release workflow 38763404528 (https://github.com/Richards-LLC/cassy/actions/runs/38763404528): successful main-push run, created 15:47:21 UTC, completed 15:57:49 UTC.
- Released CHANGELOG (https://github.com/Richards-LLC/cassy/blob/033143b50ef775c1c234d73d869439d45087d4de/CHANGELOG.md) and release draft (https://github.com/Richards-LLC/cassy/blob/8063485739f2130718c03693a5888b99a2fff8d5/docs/release-notes/2026-10-15-v3.55.0-slack.md): complete change coverage.
- Previous v3.54.0 release (https://github.com/Richards-LLC/cassy/releases/tag/v3.54.0): publication window begins 2026-10-15T14:33:10Z.

Closure query: `repo:Richards-LLC/cassy is:issue is:closed closed:2026-10-15T14:33:10Z..2026-10-15T15:57:34Z`; GitHub REST search returned total_count 0. Internal tasks are excluded.

Installation: soundwave's service journal records v3.55.0 installed at 15:58:26 UTC, corroborated by the release timer. Use the API publication time: the body timer is eight seconds earlier; workflow completion is 15 seconds later.

Tag-to-published and green-to-published are unavailable on the main-push path. The named PR, main, API and journal endpoints meet the 30-minute PR-to-main and 20-minute main-to-installed budgets. Full receipts and the closure-query response are retained in task cas-5048 artifacts.
