

Bounded messages,
clear returns, and
calmer updates keep it
visible.

What you can do now

02 / 06

Reply (Was → Now):

Message limits

WAS oversized messages and notes could crowd out useful context.

NOW clear limits reject overlong content before queueing and point to an artifact remedy.

Return format

WAS handoffs varied and could repeat setup.

NOW every handoff uses six predictable fields and stays quiet unless context is running low.

Focused updates

WAS long status messages hid decisions and proof.

NOW concise updates put the decision first while detailed evidence stays available.

Startup context

WAS delivered startup context could appear again later.

NOW it arrives once per session, with a short source marker and newest task notes first.

Reliable reports

WAS release reports could count a pull request as an issue.

NOW pull requests and issues are distinguished correctly.

Under the hood

03 / 06

Reply (Was → Now):

Traffic caps

WAS coordination bodies and notes had no shared size budget.

NOW 1,200-character messages, 2,500-character escalations, and 1,500-character notes are enforced before queueing. Commit 6438dbd3.

Return contract	WAS launch responses varied and consumed context with narration. NOW every launch carries six required return fields and silent execution, with headroom only below 20 percent. Commits 789be31f and 5c33d2d2.
Pane budget	WAS supervisor output mixed decisions with long evidence recaps. NOW concise pane responses foreground the decision and keep evidence in notes or artifacts. Commit 095c3b14.
Delivery provenance	WAS startup and fallback paths could replay delivered mail and expose a long provenance header. NOW startup claims and enqueue are idempotent, delivered mail is excluded from tool-result fallback, task details show the newest five notes, claim files are pruned, and provenance is one line. Commits 987ea4c8 and aac77a6d.
Close-gate safety	WAS trunk reachability, merge recovery, and epic refresh could rely on local state. NOW origin reachability, worktree-scoped history changes, and published-parent checks fail closed. PR #806.
Release-report references	WAS pull-request references could be counted as issues. NOW issue extraction distinguishes pull requests from issues. PR #801.
