What you can do now

02 / 06

Only reply (user)

No lost messages

WAS a message to a Claude session could silently disappear, leaving finished work waiting. →

NOW every message arrives, and one that cannot is flagged where you can see it.

Violet

WAS the Slack assistant was called MechaCassy. →

NOW it is Violet everywhere; the old names keep working for one more release.

Faster checks

WAS every change waited on the whole test suite, sometimes more than once. →

NOW changes run the tests they affect, and a release candidate is tested once.

Quicker starts

WAS a new coding session spent its first minutes recompiling everything. →

NOW it starts from a cache refreshed after every release.

Under the hood

03 / 06

Only reply (dev)

Relay delivery

WAS `cleanup_orphans` compared a shared `CLAUDE_CONFIG_DIR` with sockets under the caller's `HOME`, so a temp-home test deleted live team trees and relays were abandoned after 15 `ENOENT` retries. →

NOW `cleanup` requires CAS ownership and a dead daemon, a missing tree is restored from the in-memory roster, and abandoned or stale relays escalate.

Test binaries

WAS 107 integration test binaries, each linked separately. →

NOW 4 grouped harnesses plus 6 standalone roots; `scripts/cas-test-targets.py --check` refuses unregistered suites, and self-re-exec tests require exactly one executed test.

Assembly proof	WAS the full suite ran at assembly, again in the integration sweep and again in the gate. → NOW scripts/assembly-proof.py prove records native nextest plus a plain-clone archive run, keyed by code input with member versions and the ledger masked, and the sweep and gate reuse it.
Change-scoped CI	WAS factory and epic PR runs checked everything. → NOW scripts/ci-test-impact.py selects crates, modules and suites from the diff, widens when unsure, and records recall against the unfiltered queue shards.
Worker checks	WAS workers could not compile at all. → NOW a literal cargo check -p <crate> --lib --tests is rewritten through a capped runner with OS slot locks and a private target.
Violet	WAS mecha_* tools and MECHA_* variables were primary. → NOW violet_* and VIOLET_* are primary with a one-release fallback, and the announce preflight accepts either tool pair.
Release and close recovery	WAS --cut --resume after publish failed clean-worktree, and close gates dead-ended after a plain git merge. → NOW resume starts at the publication boundary and accepts only this run's outputs, and an ancestor delivery or matching epic ASSEMBLY_PROOF satisfies the gates.
