What you can do now

02 / 06

Only reply (user)

One question, once

WAS a question waiting on you appeared twice. →

NOW it sits once above the message box, with a short pointer in the conversation.

Long updates read well

WAS a long status update spilled out of its bubble in the quietest style. →

NOW it reads as a normal reply; short ones fold with "Show full update".

Failed sends are obvious

WAS a message that failed looked sent. →

NOW it says "Not sent" with Edit and Retry, and the question stays open.

Clearer controls

WAS main buttons looked like a selected row and some hints were too faint. →

NOW main buttons stand out and every hint is readable.

Phone and dark mode

WAS the phone header took a fifth of the screen and dark mode glared. →

NOW a one-row header, calm dark colours, and a clear listening state on the mic.

Under the hood

03 / 06

Only reply (dev)

Thread

WAS pinned ask duplicated in flow; long statuses coalesced into a radius-999 pill. →

NOW collapsed ask pebble; statuses over 140 chars or with an ask render as supervisor bubbles; 3-line clamp with expand (PR #956).

History state

WAS answered()/waiting() counted refused sends. →

NOW refused sends never answer an ask or acknowledge a blocker; Retry keeps in_reply_to.

Tokens

WAS .primary on --bg-active (1.18:1); dark floods. →

NOW .primary on --you-bg (8.61:1); dark tint + 4px edge set; --bg-raised derived from canvas; placeholders --ink-mid.

Layout	WAS 121px phone thread header; 240px desktop rail repeating the header. → NOW 56px header; rail folds to 48px unless it has asks, progress or attachments.
QA	WAS fixtures hand-copied composer/pairing markup; Playwright picked by readdir order. → NOW production markup builders; highest stable Playwright, version printed; pebble-qa 160/160, polish-qa 6/6.
Assets	WAS n/a. → NOW cas-x86_64-unknown-linux-gnu.tar.gz 73f9c4b50a472f5c39872ccb3e9b772abc7afc2447f5b70c3e79afd170c1188c; cas-aarch64-apple-darwin.tar.gz 1cdd78fcd3d82d509411afb46e755374d37c3a65c917c21d70b8c9eaeef852e47.

GitHub issue theme assignment uses labels first, then the keyword table in the CLI. Any issue classified as Unclassified is shown in the map so a human can correct the Markdown before rendering.
