PUBLISHED 15 OCTOBER 2026 · 20:18:22 UTC · RELEASE COMMIT EE41E822F1366BB62FC1B3B982CC4A718FDD9F21.

The release's 18 tracked closures cluster in Factory workflows, while two Delivery fixes tighten how evidence is attributed and stored.

Factory leads the closure stitch with 16 of 18 tracked issues; the other two improve delivery evidence.

One dot, one closed issue. 2 issue-bearing surfaces.

GitHub publication to completed host install at 20:19:49Z

The issue window is 15 October 2026: the 18 unique issues listed on PR #1214 closed between 20:11:30Z and 20:11:38Z. Durations use GitHub's PR `createdAt`, `mergedAt`, release `publishedAt`, and the host journal's completion timestamp. PR-opened-to-installed is 24 m 01 s; the timer rounds partial minutes up to 25.

▼ Change map · data and reading guide

Each equal-area dot represents one issue closed in the release PR. The figure counts closures, not impact, effort, or severity.

Change map data · closed issues by surface

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
Factory	16	#1173, #1174, #1175, #1177, #1179, #1180, #1185, #1190, #1195, #1197, #1199, #1200, #1202, #1207, #1208, #1209
Delivery	2	#1181, #1188
Total	18	2 issue-bearing surfaces

What you can do now

Factory

No freezes while waiting

WAS the screen could stall while checking on outside events.

NOW those checks run in the background, so typing and rendering stay responsive.

Messages arrive

WAS a message to a teammate could sit undelivered while later messages got through.

NOW each message is delivered and marked read only after the recipient actually receives it.

Fewer false alarms

WAS people could be told a conversation was abandoned or a busy process had stalled when neither was true.

NOW those warnings are tied to observed activity and real outcomes.

Your phone sees the conversation

WAS some replies never reached Commander, and the phone could show a question without its answer.

NOW replies are mirrored, and the phone shows terminal questions together with their replies. Operators can turn the automatic reply mirror off and on.

Starting a session

WAS startup could time out while waiting for the CAS server, and a build mismatch could fail late.

NOW startup honors the wait window, and a known daemon/provisioner mismatch is caught before launch with a recovery command.

Stop and reset commands

WAS a stop or context reset could fail silently under store contention.

NOW the action takes effect or leaves a recorded failure with a reason.

Under the hood

Factory

Reminder probes

WAS external `branch_contained_in`, `tag_exists`, and `ci_completed` probes ran `git fetch` and `gh` on the daemon loop.

NOW probes run off-loop, fetch each ref once per pass, and back off or expire stale reminders.

Teams inbox

WAS a Claude Teams member's messages stayed gated.

NOW the `<name>@<session>` member owns its inbox, messages surface at tool boundaries and turn start, and confirmation needs a transport receipt.

Spawn validation

WAS boot checks could kill Claude launches waiting on the CAS server, and build drift could fail only during provision.

NOW the startup wait is honored, a positive mismatch is refused before queueing, and inconclusive identity checks say they were skipped so provision-time validation remains the backstop.

Delivery receipts and merge gates

WAS QA waivers could follow the wrong branch, a receipt could include a later merge's files, and a merge request could be suppressed as already landed when it was not.

NOW waivers and proof bind to the delivery branch and the receipt's first-parent diff; unresolved deliveries are refused before close, and a park sends one notification.

Worker lifecycle

WAS `shutdown_workers` and `clear_context` could silently fail when the daemon's store wait budget was spent.

NOW shutdown works under contention, while a failed recycle records a terminal result and tells the supervisor why.

Coordination and tools

WAS one missing `remind` requirement hid the rest, verification rejected `issues` arrays, and broadcasts could not be replaced or delivered to later joiners.

NOW refusals list every missing requirement, verification accepts JSON arrays, and broadcasts support replacement keys and later-joiner delivery. Tool schemas stay within the 3,600-byte cap.

Artifact uploads

WAS artifact publishing rejected WebM QA recordings even when they were below the size limit.

NOW `video/webm` recordings can be published as durable task artifacts.

Test and documentation maintenance

WAS hub-web lifecycle tests could race under load, and test-shape pins rejected valid rebased lanes.

NOW the lifecycle tests are stable under concurrency, valid pins survive rebases, and the communication contract, codemap, and product overview are current.

Install

05 / 06

```
cas update --yes --version 3.56.0
```

- macOS ARM64 — download archive (https://github.com/Richards-LLC/cassy/releases/download/v3.56.0/cas-aarch64-apple-darwin.tar.gz), SHA-256 `c6fb522223838a0a2f4c4f127d590bc661c634d06375505bff8c98524a150f4f`, 32,154,791 bytes.
- Linux x86_64 — download archive (https://github.com/Richards-LLC/cassy/releases/download/v3.56.0/cas-x86_64-unknown-linux-gnu.tar.gz), SHA-256 `32b5a9759033965fbdf3967d4ffe7831cba021f036d9aed263afc4009de03e7d`, 35,486,039 bytes.

Evidence and scope

The report covers the v3.56.0 runtime published from release commit `ee41e822f1366bb62fc1b3b982cc4a718fdd9f21`. The source window is the 18 unique issues closed by PR #1214 (https://github.com/Richards-LLC/cassy/pull/1214) on 15 October 2026. The changelog is at the release commit (https://github.com/Richards-LLC/cassy/blob/ee41e822f1366bb62fc1b3b982cc4a718fdd9f21/CHANGELOG.md); the published release is v3.56.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.56.0).

Timing sources: GitHub PR #1214 (`createdAt` 19:55:48Z, `mergedAt` 20:11:27Z), release `publishedAt` 20:18:22Z, and the host install journal (service start 20:19:11Z; completion 20:19:49Z). Retrieved 15 October 2026 at 21:56 UTC. Exact timing evidence is saved with this task's artifacts.

The current release process uses PR-opened-to-installed as its single timer. The older tag-to-published receipt and stage budgets are not part of this release; that legacy measurement is unavailable, so no budget verdict is claimed. The host log confirms `cas update` completed at v3.56.0; this report makes no installed-binary benchmark, production performance, or exhaustive closure-census claim. Dots count issue closures, not impact, effort, or severity.
