

One epic walk and two memory repairs make shipped work easier to exercise, receive, and re-check.

SURFACE		CLOSED
QA		1
Memory		2
Release	no listed issues	0
Doctor	no listed issues	0

QA gains one counted reference closure while Memory carries two repairs; Release and Doctor add capabilities without counted issue closures.

One dot, one closed issue. 2 issue-bearing surfaces.

Release at a glance

01 / 06

3 Issues closed Named release issues verified CLOSED on GitHub	3 Added entries Top-level Added entries in CHANGELOG 3.21.0	3 Changed entries Top-level Changed entries in CHANGELOG 3.21.0	40m 02s Green to published Release gate green at 13:14:20Z to publication at 13:54:22Z; 2,402 seconds
---	--	--	--

Six changelog entries: three Added and three Changed. Changelog counts are entries, not independent features. The issue count covers #759, #763, and #764 only; #763 and #764 were carried from main into this release, while #759 closed with the release. Green-to-published ends at the publication receipt, not at tag push.

▼ Change map · data and reading guide

One dot means one verified GitHub closure, not severity or effort. Read the rows as a ledger of named closures; the Was → Now sections describe the broader release surface.

Change map data · closed issues by surface

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
QA	1	#759
Memory	2	#763, #764
Release	0	Release-gate capability; no counted closure
Doctor	0	Hook-silence capability; no counted closure

SURFACE	ISSUES CLOSED	ISSUE NUMBERS
Total	3	Three verified issue closures across two issue-bearing surfaces

Source: Release PR #777 (<https://github.com/Richards-LLC/cassy/pull/777>), the v3.21.0 changelog (<https://github.com/Richards-LLC/cassy/blob/v3.21.0/CHANGELOG.md>), and closed issues #759 (<https://github.com/Richards-LLC/cassy/issues/759>), #763 (<https://github.com/Richards-LLC/cassy/issues/763>), and #764 (<https://github.com/Richards-LLC/cassy/issues/764>), retrieved 2026-09-09 14:04 UTC. The surface order follows this release's QA, Memory, Release, and Doctor themes; dots count closures, while prose records capabilities.

What you can do now

02 / 06

Quality at the epic level

Walk the whole feature once

WAS each task could be exercised alone, leaving interactions between tasks to surface after release.

NOW when any child task names a demo outcome, Cassy walks the assembled epic once with a combined 60-minute matrix, records coverage and misses, and checks for contradictions across children.

Close an epic on evidence

WAS an epic could close on the strength of individual task reports.

NOW epic verification requires the flow-walk note and ledger on the current tip, then applies the evidence REJECT table before reading the close reason.

Telemetry in QA

Let a project sweep its own analytics

WAS QA had no contract for production analytics, and a reporter with no events could look like a clean run.

NOW an optional read-only `qa.telemetry_sweep` command records NEW, RISING, HIGH_RATE, and BLACKOUT findings in the QA ledger, or says plainly when no sweep is configured.

Memory

Keep recall arriving in long sessions

WAS long Claude Code sessions could silently stop receiving Cassy's recall and factory mail when the prompt hook was omitted.

NOW PostToolUse or an MCP response delivers the same turn context once per prompt when UserPromptSubmit is silent, and the doctor report makes observed hook silence visible.

Rank the matching lesson first

WAS recent exact-match memories could lose to an eight-row recency window, semantic search could miss its budget, and unbound commits could outrank guidance.

NOW discovery ranks term overlap before recency, caps prompt terms at 16, gives semantic search a 1,500 ms deadline, and keeps commit history behind guidance.

Release

Re-check an unchanged release quickly

WAS the release gate ran the workspace suite twice and retained no per-row timing evidence.

NOW the suite runs once across complementary nextest and archive rows, each row records timing, and `--reuse` can re-gate an unchanged tree from content-keyed receipts without authorizing the pipeline.

Doctor

See when the prompt hook goes quiet

WAS a missing `UserPromptSubmit` invocation left a live session without a visible diagnosis.

NOW `cas doctor` reports prompt-hook silence and counts the observed misses so an operator can distinguish a quiet hook from an empty result.

Under the hood

03 / 06

Epic flow walk

Supervisor procedure

WAS the supervisor checklist ran the suite on the epic branch and closed without one cross-child product pass.

NOW after the detached gate launch, one verifier-class evidence agent derives a capped matrix from every child `demo_statement`, walks the assembled tip for 60 minutes, and writes one `LEDGER.md` plus one Epic flow walk note; retries resume the same pass.

Verifier gate

WAS `verification_type=epic` checked subtasks and the close reason.

NOW the gate enumerates child demos, requires the walk note and ledger for the current tip, and applies the Step 0A REJECT table before reading close prose.

Telemetry sweep contract

Configuration seam

WAS project analytics had no QA configuration seam.

NOW `qa.telemetry_sweep` is an optional project-relative string that round-trips through `config get`, `list`, and `set`.

Evidence labels	WAS QA ledgers had four evidence labels and no defined treatment for analytics findings. NOW a read-only sweep runs first with <code>--reporter</code> when configured; six-field TSV findings become <code>eyewitness/telemetry</code> rows, and the header records configured or not configured.
-----------------	--

Memory and context delivery

Turn-context fallback	WAS the <code>UserPromptSubmit</code> hook was the only delivery path for ambient recall, supervisor reminders, and factory inbox context. NOW <code>PostToolUse</code> and MCP response paths share a once-per-prompt turn-context receipt, using a local-only recall path that does not wait on the cloud when the prompt hook is silent.
-----------------------	---

Ambient ranking	WAS an eight-row recency window could omit a same-day nine-term match, the 400 ms semantic budget was too short, and unbound history could outrank guidance. NOW overlap-first discovery, a 16-term cap, a 1,500 ms semantic deadline, strong lexical evidence, and at most one history commit keep relevant guidance in front.
-----------------	---

Release controls

One workspace suite	WAS in-tree <code>nextest</code> and the archive row repeated almost the same workspace execution. NOW the <code>nextest</code> row covers the snapshot complement and the archive row executes the workspace once, preserving coverage without duplicate execution.
---------------------	--

Reuse without authorization drift	WAS a one-line release fix required a full re-gate and there was no content-keyed unchanged-tree reuse. NOW <code>--reuse</code> restores eligible PASS rows by exact content inputs while the pipeline still requires its own exact-SHA gate receipt.
-----------------------------------	--

Doctor observability

Hook-silence row	WAS <code>prompt-hook</code> silence had no durable operator-facing count. NOW <code>cas doctor</code> reports the silent-hook condition and the number of observed misses, making a missing invocation diagnosable rather than inferred from an empty prompt.
------------------	--

ISSUE	SURFACE	WAS → NOW	CLOSED AT (UTC)
-------	---------	-----------	-----------------

ISSUE	SURFACE	WAS → NOW	CLOSED AT (UTC)
#759 (https://github.com/Richards-LLC/cassy/issues/759)	QA	Per-task QA could miss cross-child interactions → one epic flow walk records coverage, misses, and contradictions.	2026-09-09 13:32:22
#763 (https://github.com/Richards-LLC/cassy/issues/763)	Memory	Silent prompt hooks dropped recall and factory context → turn context arrives once through tool paths and silence is diagnosed.	2026-09-08 23:47:05
#764 (https://github.com/Richards-LLC/cassy/issues/764)	Memory	Recency, semantic timeout, and history noise hid relevant guidance → overlap-first ranking and bounded semantic search keep the matching lesson visible.	2026-09-08 22:24:07

States and closure times come directly from GitHub. Each issue is counted once; Release and Doctor are capability surfaces with no separate issue in this release's closure set.

Install

05 / 06

Update an existing installation:

```
cas update
cas --version
```

Expected version for this report: 3.21.0. For an exact-version installation, use the archives on the published v3.21.0 release (<https://github.com/Richards-LLC/cassy/releases/tag/v3.21.0>).

Linux x86_64: [cas-x86_64-unknown-linux-gnu.tar.gz](https://github.com/Richards-LLC/cassy/releases/download/v3.21.0/cas-x86_64-unknown-linux-gnu.tar.gz) (https://github.com/Richards-LLC/cassy/releases/download/v3.21.0/cas-x86_64-unknown-linux-gnu.tar.gz). SHA-256: dfcbdf1936dc1c8a8643153ed1cfd53e6ac621fde6f00847d4cbf7de806deed2

macOS ARM64: [cas-aarch64-apple-darwin.tar.gz](https://github.com/Richards-LLC/cassy/releases/download/v3.21.0/cas-aarch64-apple-darwin.tar.gz) (<https://github.com/Richards-LLC/cassy/releases/download/v3.21.0/cas-aarch64-apple-darwin.tar.gz>). Digests match the publication receipt and GitHub release asset metadata; archives were not redownloaded and installed binaries were not rerun. `cas update` follows the current release; archive links pin v3.21.0.

Evidence and scope

06 / 06

Published commit: 7bf6d2cd0c121e6aeb25db42f76dab5055982f48, tag v3.21.0. Publication time: 2026-09-09T13:54:22Z. Sources were retrieved 2026-09-09 14:04 UTC.

- [CHANGELOG at v3.21.0](https://github.com/Richards-LLC/cassy/blob/v3.21.0/CHANGELOG.md) (<https://github.com/Richards-LLC/cassy/blob/v3.21.0/CHANGELOG.md>): three Added and three Changed entries form the release inventory.
- [Release PR #777](https://github.com/Richards-LLC/cassy/pull/777) (<https://github.com/Richards-LLC/cassy/pull/777>): release scope, candidate tip, merge commit, and named issue #759.

- Announcement draft at v3.21.0 (<https://github.com/Richards-LLC/cassy/blob/v3.21.0/docs/release-notes/2026-09-09-v3.21.0-slack.md>): user and developer Was → Now themes; publication receipt supplies the final digests when draft placeholders remain.
- Issue #759 (<https://github.com/Richards-LLC/cassy/issues/759>), issue #763 (<https://github.com/Richards-LLC/cassy/issues/763>), and issue #764 (<https://github.com/Richards-LLC/cassy/issues/764>): queried with `gh issue view NUMBER --repo Richards-LLC/cassy --json title,url,closedAt,state and verified CLOSED`.
- Published release (<https://github.com/Richards-LLC/cassy/releases/tag/v3.21.0>): release tag and asset metadata.
- Release workflow run 34359808234 (<https://github.com/Richards-LLC/cassy/actions/runs/34359808234>): completed successfully for the published commit.

Timing: `/home/pippenz/.cas/artifacts/release/v3.21.0-epic-2229-merge/gate.log` records the final release gate green at 2026-09-09T13:14:20Z; `release-published.receipt` records publication at 2026-09-09T13:54:22Z, yielding 2,402 seconds (40m 02s). `release-latency.receipt` separately records tag push at 13:51:39Z and tag-to-publication latency of 163 seconds; that shorter interval is not substituted for green-to-published time.

Receipt evidence: `/home/pippenz/.cas/artifacts/release/v3.21.0-epic-2229-merge/release-published.receipt` contains both full asset digests, `release-workflow.json` records workflow success and the published SHA, and `gate.log` records all release-gate rows PASS. The v3.21.0 draft on the source tag still carries its publication-placeholder wording; this report uses the publication receipt for the final digests.

Scope: a publication brief, not a runtime benchmark or an exhaustive repository closure census. Dots do not measure impact, effort, or severity. Runtime claims are attributed to the shipped changelog and PRs; this report does not claim a fresh archive download, installed-binary run, or production telemetry result.
