What you can do now

02 / 06

Only reply:

Answers arrive

WAS Cassy could address its reply to your name instead of the conversation, and it vanished while still reporting "sent". →

NOW replies to your name reach you, and a reply to nowhere is refused on the spot.

Typing on the phone

WAS opening the keyboard pushed the header and the latest messages off the top of the screen. →

NOW header, latest message and the box you are typing in all stay in view.

Hub comes back after updates

WAS updating Cassy could leave your hub running the old version, outside its service. →

NOW the update restarts the hub through its service on the new version, at the same address.

Under the hood

03 / 06

Only reply:

Reply routing

WAS message accepted any target string; a `commander:...` reply had no verified-device stamp, so `peek_operator_replies` never selected it and the daemon abandoned it 15 min later. →

NOW `commander:<label>` resolves the newest verified Commander row (in_reply_to + device), row-source prefixes and empty targets are refused before enqueue, queue-before-register for plain names is unchanged, and Commander rows are framed with the exact reply command in inbox, hook and daemon renderers.

Keyboard viewport

WAS viewport meta without `interactive-widget`, 100dvh shell scrolled under the soft keyboard. →

NOW `interactive-widget=resizes-content`, `--keyboard-viewport-height` from `visualViewport` as fallback, `followTail()` on composer focus; pebble-qa keyboard receipts at 390x544 on both paths.

Hub service restart

WAS update relaunched a detached `cas hub serve --launched-by update` beside an inactive unit and later left the old binary running. →

NOW with `cas-hub.service` installed, restart goes through `systemctl --user restart`, the outcome records old→new version, the unit keeps `--tailscale-serve`, and status/doctor flag an inactive unit with a detached lock holder; `systemctl` is injected via `CAS_HUB_SYSTEMCTL` in tests.

Assets

WAS n/a. →
