What you can do now

02 / 06

Everyday use

Suggested commands

WAS help text could offer a command Cassy rejects. →

NOW every suggested command is checked against what Cassy accepts.

Startup guidance

WAS session startup text could exceed its size limit and arrive as a preview. →

NOW it fits in full for every role.

Closing tasks

WAS close checks could judge an older version of your change. →

NOW they check the version you just delivered.

Command names

WAS messaging and team control shared one tool. →

NOW team control has its own tool; the old names still work this release.

Your installation

Updates

WAS cas update left some skill files at their first version and kept retired ones. →

NOW it refreshes every file, keeps your edits, removes the rest.

Grok, OpenCode and Codex

WAS Grok and OpenCode could load skills with commands they cannot run. →

NOW each gets a copy that works for it.

Instruction files

WAS CLAUDE.md repeated the shared project instructions and grew past its limit. →

NOW the shared file leads and CLAUDE.md imports it.

Project boundaries

WAS rules and notes from one project could land in another. →

NOW Cassy refuses them and keeps them out of sync.

Release notes skill

WAS it was called release-notes. →

NOW it is cas-release-notes, so it no longer clashes with a Grok command.

Under the hood

03 / 06

Prompts and tools

Call-shape lint	WAS suggested calls could omit summary, remind_message Or dispatch_id. → NOW a test checks every call in skills and runtime templates.
Tool split	WAS coordination shipped 61 params to every session. → NOW factory holds fleet, worktree, server, db, loop and queue; old names alias for one release.
SessionStart	WAS worker and supervisor payloads hit 11.8–13.2 KB, past the hook cap. → NOW at most 9,216 B for every role, pinned by a test.
MCP schema	WAS one description passed the 2 KB cut and 16% of tools/list was boilerplate. → NOW descriptions ≤2,048 chars, action enums, no nullable noise.
Worker prompts	WAS Claude workers in a Codex session got mcp__cs__ names. → NOW prefixes resolve per recipient and one renderer builds every contract.
Close gates	WAS gates keyed off stale heads, so one sibling merge voided other dispatches. → NOW they use the current tip; platform proof defers to assembly.

Catalog, install and store

One skill tree	WAS Claude, Codex and Grok catalogs were hand-kept twins. → NOW bare tool names; Grok and OpenCode get project copies, Codex no .md agents.
Install sync	WAS non-SKILL.md files never refreshed after first install. → NOW every file refreshes, removed files prune, and cas doctor reports parity.
Store guard	WAS another project's rules and pages could be written, pulled or pushed here. → NOW writes are refused and sync keeps them out.
Verifier and Stop jobs	WAS task-verifier was 27.7 KB and session-learn parsed skill text. → NOW 9.3 KB, a dedicated classifier, and rule action=promote.
Operator-data lint	WAS shipped skills carried real names and ids. → NOW a lint keeps them synthetic.
Instruction files	WAS repo CLAUDE.md duplicated AGENTS.md. → NOW AGENTS.md is canonical and CLAUDE.md imports it with Claude-only lines.
