Cassy v4.19.0

RELEASE REPORT · PUBLISHED 12 NOVEMBER 2026 · 9:18 AM ET

Task updates reach your other machine on their own schedule, and all 14 shipped tasks closed at release.

AREA	CHANGES
Sessions	4
Tasks	3
Messages	1
Releases	3
Slack and Cloud	1

12 changes listed across 5 areas; Sessions has the most, 4.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.19.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	4	Keep peer task state current during background work; Identify jobs blocking daemon updates; Authorize imports before the first park; Show the age of late lifecycle signals
Tasks	3	Concurrent receipt handoff; Keep selected test logs ready for receipts; Inherited identity attribution
Messages	1	Finish uploads when the message link is unavailable
Releases	3	Linked worktree project identity; Return a clear hold while a merge candidate builds; Resume shipped release imports
Slack and Cloud	1	Skip busy stores before cloud setup
Total	12	5 areas

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-12-v4.19.0-slack.md`, GitHub `Richards-LLC/cassy` release v4.19.0; retrieved 12 November 2026 · 9:21 AM ET.

12

Changes listed

12 fixed; tests, docs, known limits and upgrade notes not counted

14m 36s

Main to published

Met the 20m budget; merged release to GitHub publication

13h 14m 56s

First child to main

Missed the 30m budget: the cut was held overnight; first child commit to merged release

1

Queue runs

One merge-queue run proved the final tree

14m 39s

Green to published

Within budget (20m 0s budget); Merge-queue CI completion to publication

14 of 14

Closed at publication

3 closed by this release, 11 already closed; none held

Changes and GitHub issues are counted separately. A change is one titled entry in the v4.19.0 CHANGELOG section; entries under Test, Doc, Known limits, Upgrade, Migration or Operator guidance headings are listed under the hood but not counted. A GitHub issue counts when release PR #1862 or the CHANGELOG section references it and it closed between the PR opening (8:41 AM ET) and 15 minutes after its merge (9:19 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. The timing receipt records no blockers and zero interventions; these zero figures are omitted above. Not measured for this release: request to published, cut to published, lesson recurrence.

Closeout at publication: the v4.19.0 binary (reconciler version 4.19.0, per the release reconcile receipt for the shipped commit) reconciled its own release at 9:20 AM ET. All 14 shipped tasks are closed: 3 closed by the release and 11 were already closed. Two containing epics stayed open. One still holds unfinished work. The release's own epic was held because the closing step could not name who was asking for its review; that fault is tracked as GitHub issue #1864 (https://github.com/Richards-LLC/cassy/issues/1864).

02 / 06

What you can do now

Two machines, one picture

Updates arrive on time

WAS

long background chores on one machine could hold back task updates for the other.

NOW

task updates sync on their own schedule, and a machine already syncing skips extra cloud calls.

Merges no longer stall on a busy build

WAS

two submissions for the same delivery could leave one waiting with nothing to show.

NOW

they share one build, and a slow build gives a clear "still building" answer and a notice when it is ready.

Clearer update blockers

WAS

a refused update did not say which job was in the way.

NOW

it names the blocking jobs and explains the safe way to recover.

Release reports post even without a message link

WAS
a report upload could fail when Slack returned no link for the message.

NOW
the upload is recorded and the missing link is marked unavailable.

Release cuts work from any checkout

WAS
cutting a release from a separate working copy could treat this project's own work as foreign and refuse.

NOW
the working copy inherits the project's identity and the cut sees its own work.

Fixes resume cleanly

WAS
a returned fix that carried already-released work could not restart.

NOW
it restarts, while unreleased work from elsewhere is still refused.

03 / 06

Under the hood

Release changes

Entity sync

WAS
the daemon awaited full sync in the same select as index and maintenance work, and held a store-wide lease through quality-event batches.

NOW
entity pull has an independent timer; knowledge and quality serialize their own cursors; background sync takes the store lease before discovery and registration.

Pre-merge candidates

WAS
candidate preparation ran inline against a 55 s budget, and a duplicate concurrent receipt got an immediate Pending(None).

NOW
one coalesced background build with a 20 s response wait; same-key receipts share the in-flight result.

Reexec

WAS
a refused in-place update hid which work blocked it.

NOW
daemon and app guards share one named-blocker diagnostic (worker, occurrence, elapsed, job kind) pointing to a full factory restart.

Resume guard

WAS
resuming a release-sync lane refused commits imported from a released tag.

NOW
commits reachable from origin's trunk are excluded before attribution; local tags grant nothing.

Linked-worktree identity

WAS

repo_identities read only <checkout>/.cas, so a .cas-free linked worktree held release members as ForeignScope (GH #1827).

NOW

it falls back to the main worktree's pin via the git common dir; an explicit local pin still wins, and empty-checkpoint attribution still needs a local pin.

Merge-source grants

WAS

a grant on a blocked first-park task failed on the syncing store.

NOW

it uses the store's guarded update.

Receipts and relays

WAS

capped runs mixed guard output into the selected test log, and late lifecycle relays showed queue age.

NOW

the selected run has its own log path in the receipt, and relays report age from the original transition.

Release tooling

WAS

the version-literals fast row flagged fictional versions in skill exemplars, and report posts failed on a null message permalink.

NOW

exemplars are excluded, and a null PDF message permalink is recorded as unavailable while the file permalink stays required.

Evidence and scope

Each change is placed in a product area by the words in its title, then its text; a change that matches no area is listed under Other.

Release PR: https://github.com/Richards-LLC/cassy/pull/1862 (https://github.com/Richards-LLC/cassy/pull/1862) (merged 12 November 2026 · 9:04 AM ET).

Release-notes draft: release source (https://github.com/Richards-LLC/cassy/blob/eb917922c8d9c8c3d382f6d9b05d1305272fbfb6/docs/release-notes/2026-11-12-v4.19.0-slack.md). Posted User thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794493202376289) and Dev thread (https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794493211832169).

CHANGELOG source: published CHANGELOG (https://github.com/Richards-LLC/cassy/blob/eb917922c8d9c8c3d382f6d9b05d1305272fbfb6/CHANGELOG.md).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v4.19.0 (https://github.com/Richards-LLC/cassy/releases/tag/v4.19.0) (published 12 November 2026 · 9:18:49 AM ET).

Release receipt (relative to ~/.cas/artifacts): `release/v4.19.0-latency/release-latency.receipt`.

Published identity: annotated tag `35ac6681c399f7251b2b1337c089f161a138bd73` points to shipped commit `eb917922c8d9c8c3d382f6d9b05d1305272fbfb6`. Publication and all three asset digests were re-read from the GitHub API (https://api.github.com/repos/Richards-LLC/cassy/releases/tags/v4.19.0).

Validation: one merge-queue run (https://github.com/Richards-LLC/cassy/actions/runs/43230471794) proved the final release tree. No application journeys, installation success on every machine or before/after captures are claimed.

Timing endpoints: first child commit at 7:49:17 PM ET on 11 November to main landing at 9:04:13 AM ET is 47,696 seconds against 1,800 (missed); the release cut was held overnight, so this interval is mostly the hold, not build or review time. Main landing to GitHub publication at 9:18:49 AM ET is 876 seconds against 1,200 (met). Queue green at 9:04:10 AM ET to publication is 879 seconds against 1,200 (met). Stage timings are unavailable: the latency receipt records no STAGE_SECS.
