What you can do now

02 / 06

Commander, in Glass and steadier

A new look: Glass

WAS flat paper-and-graphite panels. →

NOW a violet-to-teal aurora behind frosted panels, a glowing violet Send and a warm amber-to-coral card for questions, in light and dark, with text kept easy to read, solid panels for forced colours, more contrast or reduced transparency, and no motion.

No more flickering "Reconnecting"

WAS a brief hiccup in Commander's update feed dropped every working conversation and the header flickered "Reconnecting". →

NOW conversations that are still talking stay connected and read Live.

Calmer recovery

WAS a shaky connection retried at full speed and the conversation list could empty out. →

NOW retries back off and the list stays filled while Commander recovers.

"Send again" settles

WAS a message resent with "Send again" could stay on "Waiting for ... to confirm" after it arrived. →

NOW it settles as Delivered, with one copy in the conversation.

Under the hood

03 / 06

Commander and release fixes

Glass look

WAS the paper/graphite token set. →

NOW `glass.css` re-colours the generated roles with an aurora under frosted chrome panels, every gradient and blur inside `forced-colors: none`, opaque panels under more contrast or reduced transparency, no animation, and `glass.test.ts` pinning every text pair at 4.5:1 or better.

Attach-storm fix

WAS every event-stream reconnect abandoned all terminal sockets, so each SSE flap re-attached healthy sessions. →

NOW only sockets silent for four heartbeats, or a proven machine outage, are replaced, and sockets still opening keep their own deadlines.

Event backoff and health	WAS stream headers reset the retry streak and the header read only machine state. → NOW the streak resets after 10 s of stable stream, a session with recent frames reads Live, and recovery refreshes the catalog before going live.
Resend receipts	WAS retiring a legacy socket closed it before an in-flight ack arrived, so "Send again" stayed unconfirmed. → NOW a retired socket drains for 5 s, accepting only known client_ref and target receipts under the current credential fence.
Integration proves no-build rows	WAS markdown-lint and script-tier failures surfaced only in the cut. → NOW rolling integration records the 11 fast rows and ci-script-tests against its tip, with every train control exported, and preflight refuses missing, stale or failed rows.
Suite environment scrub	WAS suite children inherited train control variables. → NOW release-test-env.sh strips identity and train/gate namespaces, sets a clean HOME and disables global Git config, keeping memory admission and linker context.
Lane compile proof	WAS previews nested under a scratch directory were refused by private target ownership before Cargo ran. → NOW previews are direct worktree children with bound sibling provenance, and GC still handles older nested previews safely.
Compiler cache and build leases	WAS a cold sccache client handed the inherited target lease to its long-lived server, so the next capped test failed with EAGAIN. → NOW capped runs blank both rustc wrappers, while real builders keep the lease and assembly and CI builds keep sccache.
