Diagnostics	1	#875
Total	15	4 issue-bearing themes

What you can do now

02 / 06

Only reply:

Closing after review

WAS after a reviewer merged your work, closing could reject the recorded change. →

NOW the task closes from that merged work.

Retrying a rejected check

WAS retrying could replay the same rejection. →

NOW retry checks the repaired change while keeping prior feedback.

Starting independent work

WAS an open prerequisite could block unrelated work from starting. →

NOW unrelated work can start while the prerequisite remains open.

Fresh reminders

WAS a recent action could still trigger an old reminder. →

NOW recent activity resets the reminder quiet period.

Protected workspace

WAS maintenance could pull the workspace out from under active work. →

NOW active work keeps its workspace intact.

Clear build failures

WAS a knowledge build could fail without naming the file. →

NOW it identifies the file that failed and explains next steps.

Workspace-preserving restart

WAS restarting a near-limit session could lose its workspace. →

NOW an idle session restarts in place with its workspace and setup.

Shortcut names

WAS shortcut names could behave differently from their documentation. →

NOW documented names resolve consistently.

Only reply:

#873 / #887 / #892 — Anchors	WAS merge tips, remote-only checks, and missing receipts could obscure delivery. → NOW recorded anchors, local targets, and branch tips preserve close proof.
#883 — Fresh verification	WAS a rejected dispatch could authorize a retry. → NOW rejection stays in history and retry mints a current-head dispatch.
#886 — Dependency timing	WAS dependencies stopped start and serialized work. → NOW start warns; close and merge enforce order; <code>requires_start</code> is the explicit hard gate.
#888 — Relay supersession	WAS delayed relays could revive old state. → NOW transition and branch-tip identity revalidate each relay.
#884 / #885 — Checkout ownership	WAS sync could rebase a live checkout and detach HEAD. → NOW both sync paths refuse live worker checkouts.
#890 — Shutdown reachability	WAS shutdown checked only unpushed commits or the default branch. → NOW it checks task target, pinned epic and default branch, and fails safe.
#889 — In-place recycling	WAS a near-limit idle Codex worker needed a full replacement. → NOW <code>recycle_worker</code> restarts it with the same name, <code>worktree</code> and <code>recipe</code> .
#893 — Idle reset	WAS a tool call could leave the actionable-idle timer running. → NOW supervisor activity resets it.
#874 — Source diagnostics	WAS builds hid which source failed. → NOW progress names each source; <code>status</code> exposes failure details.
#891 — MCP aliases	WAS <code>get</code> , <code>blocked_by</code> , <code>summary</code> , <code>target</code> , <code>inbox</code> were rejected. → NOW they resolve to their canonical fields and are documented.
#897 — Seed freshness	WAS worker target seeds could be missing, unrelated, or old. → NOW snapshot provenance is recorded, changed crates are skipped, stale seeds warn.
