Changes and GitHub issues are counted separately. A change is one titled entry in the v3.99.1 CHANGELOG section; entries under Test, Doc or Known limits headings are listed under the hood but not counted. A GitHub issue counts when release PR #1461 or the CHANGELOG section references it and it closed between the PR opening (3:43 PM ET) and 15 minutes after its merge (4:22 PM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

Release changes

Resume after a crash

WAS

a crash could leave you unable to restart under the same name.

NOW

a crashed session can be restarted under its own name, keeping its work and any unsaved commits.

03 / 06

Under the hood

Release changes

Same-name recovery

WAS

retained PTY panes blocked relaunch, and recycle rejected stopped workers.

NOW

exited panes are replaced while the same checkout, task branch and unpushed HEAD survive recovery.

Protect live sessions

WAS

registry-only recovery could target a running replacement or cross session boundaries.

NOW

queued recovery cannot stop a live same-name pane, and dead-row recovery requires an owning session.
