cas-src v4.8.0

RELEASE REPORT · PUBLISHED 8 NOVEMBER 2026 · 11:57 PM ET

A release closes what it shipped.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.8.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Commander	2	Project cards identify the supervisor; Dismiss stuck supervisor commands
Sessions	2	Isolated QA servers with `cas serve --sandbox <dir>`; Resolve Rust tools for isolated tests
Tasks	10	Batch QA receipts name the record they wrote; A batch receipt is refused for a ledger the close gate would reject; Reassigned tasks inherit their source branch safely; Epic QA status names the child receipts that cover it; A delivery already in its train is reported as merged; A reopened delivery closes on the receipt that already covers it; The automatic verifier runs on Claude when no Codex account can; A second verifier can no longer be spawned under a running one; The automatic verifier is told where the task's evidence lives; The verification tool's schema fits its size budget again
Releases	5	Close deliveries after release prep; Reconcile shipped release trains; The release receipt measures first commit to main for an untracked train; The report and receipt state one main-to-published budget; Release-notes lint refuses drafts the Slack hub would refuse
Total	19	4 areas

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-09-v4.8.0-slack.md`, GitHub `Richards-LLC/cassy` release v4.8.0; retrieved 9 November 2026 · 12:02 AM ET.

19

Changes listed

18 fixed, 1 added; tests, docs, known limits and upgrade notes not counted

3m 26s

Green to published

Within budget (20m 0s budget); Merge-queue CI completion to publication

3m 22s

Main to published

Within budget (20m 0s budget); release PR landing on main to publication

25h 12m

First commit to main

Over budget (30m 0s budget); the train opened 7 November

1

Merge-queue runs

Runs on the final release tree before merge (run 42562400734)

> Changes and GitHub issues are counted separately. A change is one titled entry in the v4.8.0 CHANGELOG section; entries under Test, Doc, Known limits, Upgrade, Migration or Operator guidance headings are listed under the hood but not counted. A GitHub issue counts when release PR #1682 or the CHANGELOG section references it and it closed between the PR opening (11:31 PM ET) and 15 minutes after its merge (12:08 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

02 / 06

What you can do now

Releases tidy up after themselves, and Commander is clearer

Shipped work closes itself

WAS

after a release went out, the work inside it stayed open as "waiting to merge" and piled up on the board.

NOW

the release closes what it shipped and moves anything unfinished to the next release. Items held by their own checks stay open and are listed.

Project cards name each session

WAS

a project card showed only a role, so two live sessions of one project looked the same.

NOW

each row shows the session's name before its machine.

Stuck commands can be dismissed

WAS
a Finish command that never completed blocked every later command in Commander.

NOW
Dismiss cancels it, and a later exit or command works.

Fewer tool-setup failures

WAS
some sessions could not find the Rust tools and stopped to ask for help.

NOW
they find the installed tools on their own.

Steadier checks before merge

WAS
the automatic reviewer gave up when no Codex account was free, and could miss a task's evidence.

NOW
it falls back to an available Claude account and is told where the evidence lives.

03 / 06

Under the hood

Release changes

Published-train reconcile

WAS
shipped children stayed AwaitingMerge and the train stayed open after publish.

NOW
the tag supplies a delivery verdict, shipped children close through the ordinary gates, and unfinished work moves to the oldest uncut train. A shipped child on a reused worker lane is decided by its parked anchor, not by later lane commits.

Known limit in reconcile

WAS
nothing reconciled a published train.

NOW
reconcile runs, but a child whose own close gate refuses stays open while the report still prints CLOSE for it. The report fix ships next release.

Batch QA receipts

WAS
a receipt could be written on a ledger the close gate rejects; qa_status on an epic asked for an impossible receipt; a reopened delivery waited for a receipt that already covered it.

NOW
the receipt runs the ledger check first, epic qa_status lists the covering child receipts, and close falls back to the retired anchor.

Verifier

WAS
a second task-verifier could spawn under a running one, and the automatic verifier stopped when every Codex home was unusable.

NOW
the duplicate spawn is refused, and the verifier falls back to an eligible Claude account with its evidence directory in the prompt.

Re-run worktree_merge

WAS
a delivery already in its train was asked for a fresh review.

NOW
it reports already contained and changes nothing.

Task start after reassignment

WAS
the new worker's branch never inherited the source.

NOW
it rebinds only when both old tips are inherited, with an audit note and a ledger event.

Release receipts and lint

WAS
an untracked train printed FIRST_CHILD_TO_MAIN_SECONDS=unavailable, the report showed a 10m publish budget, and lint passed drafts Violet refuses.

NOW
the PR's first commit is the fallback, the budget comes from the shared stage-budget table, and lint applies the hub's file-name and time-zone rules.

QA sandbox and capped tests

WAS
a QA `cas serve` could register in the live store, and capped tests could not find Cargo outside PATH.

NOW
`cas serve --sandbox <dir>` refuses outside stores with cloud sync off, and capped tests stage rustc and rustdoc from the resolved toolchain.

Commander

WAS
project cards showed only a role, and a stuck Finish blocked later commands.

NOW
the supervisor name shows before the machine, and Dismiss cancels queued Finish or chooser tracking in the daemon.

04 / 06

Fixes ledger

No GitHub issues are counted: release PR #1682 and the CHANGELOG reference none.

Evidence and scope

Retrieved: 9 November 2026 · 12:02 AM ET.

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-09-v4.8.0-slack.md`, GitHub `Richards-LLC/cassy` release v4.8.0; retrieved 9 November 2026 · 12:02 AM ET.

Areas were assigned by hand from each change's CHANGELOG heading, because the automatic placement by title words put release and verifier changes under Commander and Sessions. The four areas and their order are the generator's.

Release PR: https://github.com/Richards-LLC/cassy/pull/1682 `(https://github.com/Richards-LLC/cassy/pull/1682)` (merged 8 November 2026 · 11:53 PM ET).

Release-notes draft: `docs/release-notes/2026-11-09-v4.8.0-slack.md`.

CHANGELOG source: `CHANGELOG.md`.

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v4.8.0 `(https://github.com/Richards-LLC/cassy/releases/tag/v4.8.0)` (published 8 November 2026 · 11:57 PM ET from tag v4.8.0 at commit 7af442504; main at d71f2cf99; Linux x86_64 and macOS ARM64 archives attached).

Slack release notes, posted 9 November 2026 · 12:00 AM ET in #cas-internal: user thread `(https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794200334234979)` and developer thread `(https://petra-stella.slack.com/archives/C0B44GUKDK2/p1794200347454509)`.

Release receipt (relative to ~/.cas/artifacts): `release/v4.8.0-latency/release-latency.receipt`.

Pipeline latency

Gate green at 11:53:42 PM ET (merge-queue run 42562400734), main landed at 11:53:46 PM ET and the release published at 11:57:08 PM ET: 206 s from green and 202 s from main, against a 1200 s budget. First commit to main took 90712 s against a 1800 s budget; the train opened on 7 November. Stage timings are unavailable: the latency receipt records no STAGE_SECS, and request-to-published and cut-to-published were not measured.

Limits

- Known limit: published-train reconcile can print CLOSE for a child whose own close gate still holds it open. The child correctly stays open; only the printed line is wrong. The fix ships in the next release.
- First commit to main was over its budget for this train, so this release does not show a fast train, only a fast publication.
- No GitHub issues were referenced by the release PR or CHANGELOG, so the fixes ledger is empty.

No source warnings.
