What you can do now

02 / 06

Only reply (user)

Terminal endings

WAS when a worker's terminal went quiet, the last few characters, such as the end of a prompt, could stay hidden until more output arrived. →

NOW they appear as soon as the terminal goes idle.

Steadier releases

WAS a release could stall on a check that only ran at the very end, or wait too briefly for the published download. →

NOW those checks run earlier, and the release waits long enough to confirm the download.

Cleaner announcements

WAS a release note could go out with an unfilled placeholder. →

NOW a note with any unfilled placeholder is stopped before it posts.

Under the hood

03 / 06

Only reply (dev)

Lane compile proof

WAS a Rust lane merge could advance an epic without compiling. →

NOW `check-lane-compile.py --prove` records a capped `--lib` and `--tests` check of the merged tree, and the Git merge helper and `--check-lane` refuse to advance without it.

CI script tier at the gate

WAS `make test-ci-tiers` ran only in the merge queue. →

NOW the full release gate and assembly proof run it.

Pipeline push binding

WAS a rejected release-branch push was ignored and the stale PR head was enqueued. →

NOW `PUSH_REJECTED` stops the train, a re-assembled branch uses the train's recorded push as a lease, and enqueue passes `expectedHead0id`.

Announcement lint	WAS leftover double-brace placeholders passed the lint. → NOW any unresolved placeholder in the four bodies fails at preflight and again just before posting.
PTY carry	WAS the reader always withheld the last 4 bytes of a read. → NOW it withholds only a real CPR prefix and flushes it when output goes idle.
Epic retargeting	WAS parenting a loose task to an epic left its delivery target on main. → NOW it follows the epic branch, and a recorded delivery is refused with the repair command.
Reviewer accuracy eval	WAS no measurement of the two-axis reviewers. → NOW a 20-case replay shows 3/14 seeded defects caught (legacy 4/14), so review stays in shadow mode.
