▼ What shipped, by area

One dot is one change listed in the v3.62.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Commander	4	Commander "Ask to reply" is on; Commander after a hub hiccup; Commander inbox keeps updating; Commander reply retries back off
Sessions	5	New supervisor sessions start on their own; Reminders wake idle workers; Codex 0.162 workers start, and your checkout stays untouched; Background test runs on Codex workers; Held workers stay quiet
Tasks	7	Merged deliveries close themselves; Cited proof must exist; Holds survive unmet dependencies; Close records the rebased commit; Close gate follows renamed files; Verdicts record first time; Whitespace-only UI edits
Releases	4	`cas update` refreshes old Cassy skills; Journey recordings no longer fill the disk; Release script reruns after a queue repair; Release report links and timing
Memory	1	Serve memory in `gc_report`
Slack and Cloud	2	Slack messages in Cloud-managed channels; Team projects with a bare name
Other	1	Named tests keep your git on macOS
Total	24	7 areas

Changes shipped

1 added, 3 changed, 20 fixed;
tests and docs not counted

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.62.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1255 or the CHANGELOG section references it and it closed between the PR opening (10:29 AM ET) and 15 minutes after its merge (11:00 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues were closed with this release. Not measured for this release: green to published, request to published, cut to published, blockers, lesson recurrence, manual interventions.

What you can do now

02 / 06

Release changes

Sessions start on their own

WAS a new `cas claude` session opened and waited until you typed.

NOW it starts its first turn by itself.

Reminders arrive on time

WAS a reminder could sit unseen until something else woke the session.

NOW it wakes the session when it fires.

Commander sends after a hiccup

WAS a brief problem on the machine made Commander refuse every message and blame browser storage.

NOW messages send again once the machine answers, and errors name the real cause.

Commander inbox keeps updating

WAS the inbox could silently stop showing new messages.

NOW new messages keep arriving.

Ask to reply

WAS a read-only Commander browser couldn't ask to reply.

NOW it asks, you tap Allow, and the same browser replies without signing in again.

Slack threads, once each

WAS after a restart, a Slack message could be missed or answered twice.

NOW in Cloud-managed channels each message arrives once, with its text, even across restarts.

Finished work closes itself

WAS merged work waited for one more manual close.

NOW Cassy closes it once the merge is green and the review approves.

Holds stick

WAS a task you put on hold reopened when the work it waited on finished.

NOW it stays held until you release it.

Updates refresh old instructions

WAS some projects kept running outdated Cassy instructions after `cas update`.

NOW old Cassy-written copies are replaced and only your own edits are kept.

Disk stays free

WAS test recordings piled up (784 GB on one machine), and cleanup called finished work unfinished.

NOW recordings go a day after their task closes, and cleanup checks the latest code first.

Codex starts cleanly

WAS on Codex 0.162, new sessions stuck on a "Hooks need review" screen, and starting one could change your main checkout.

NOW they start normally and leave your checkout alone.

Memory you can see

WAS nothing showed how much memory each session's background server used.

NOW the cleanup report shows it per session, with a total.

Release reports

WAS report links were dead text and timing was typed by hand.

NOW links work and timing comes from the measurement.

Under the hood

03 / 06

Release changes

Startup brief

WAS 3.61's quiet park held the unstamped brief.

NOW Daemon-stamped `cas-startup` class wakes, vetoes kept.

Self-reminders

WAS held to the 45 s silence bar.

NOW wake on waiting-for-input evidence, vetoes kept.

Hub fd limit

WAS auth-store EMFILE gave a bare 401.

NOW retryable 503, NOFILE 8192 in the hub and its launchd/systemd units, one task store per project.

Commander pairing	WAS a reasonless 401 purged the pairing. NOW needs-pairing only, stale blocks self-heal.
Inbox origin	WAS a grant origin mismatch stalled replay. NOW replay continues.
Reply retries	WAS re-forwarded every ~100 ms. NOW 1 s doubling to 60 s.
Ask to reply	WAS protocol double only. NOW on via Cloud PR #181, live-checked.
Slack v2	WAS v1 claim plus sweep, per-launch slot. NOW claim → ack → Violet body → dispatch_uncertain → type → consumed, stable slot, recovery.
Auto-close	WAS workers re-closed merged deliveries. NOW green merges close with the parked reason after approval.
Citations	WAS pattern-checked. NOW `art-` ids and paths must resolve (GH #1235).
Holds	WAS unmet-dependency blocks recorded no hold. NOW always `blocked_hold` (GH #1234).
Rebased anchors	WAS close parked the pre-rebase commit. NOW the superseding pushed tip.
Renames	WAS read as DELIVERY CONTENT DROPPED. NOW followed, up to 8.
Verifier	WAS told to omit `dispatch_id`. NOW `task show` prints it.
Held workers	WAS idle relays repeated. NOW dropped at revalidation.
Codex hooks	WAS 0.162.1 read the main checkout's untrusted hooks.json, rewritten by CAS. NOW trusted on hash match, never rewritten.
Codex checks	WAS backgrounded checks died with empty logs. NOW detached, log ends `worker-check: EXIT <code>`.
Test PATH	WAS whole dirs dropped, so macOS used Apple Git. NOW only cas, codex, claude hidden.

Skills	WAS older shipped bodies looked like user edits. NOW all are in the reference history.
Disk	WAS traces kept forever (784 GB), sweep on a stale ref. NOW pruned 24 h after close, sweep fetches first.
Serve memory	WAS unmeasured. NOW `gc_report` RSS per session and total.
Team pins	WAS leaf-name match, then pull failed. NOW Cloud alias or `unregistered_pin_alias`.
QA whitespace	WAS Apple Git listed whitespace-only edits. NOW per-path `git diff -w --quiet`.
Release tooling	WAS release.sh couldn't rerun after an ejection. NOW reruns resume, `--latency-receipt` reads a run.
Tests and docs	WAS a queue race, a `master` assumption, duplicated setup. NOW deterministic, about 400 fewer lines, lane-CI cost map.

Evidence and scope

06 / 06

Retrieved: 17 October 2026 · 4:55 PM ET.

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-17-v3.62.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.62.0; retrieved 17 October 2026 · 4:55 PM ET.

Each change is placed in a product area by the words in its title, then its text; a change that matches no area is listed under Other. Correct an area in the Change map table before rendering.

Release PR: #1255 (https://github.com/Richards-LLC/cassy/pull/1255) (merged 17 October 2026 · 10:45 AM ET).

Release-notes draft: `docs/release-notes/2026-10-17-v3.62.0-slack.md`.

CHANGELOG source: `CHANGELOG.md`.

GitHub release: v3.62.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.62.0), published 2026-10-17T14:53:33Z; not a draft or prerelease. The annotated tag resolves to 74ae31197470f1a8674f4f8afa8d60bad69d2451 (https://github.com/Richards-LLC/cassy/commit/74ae31197470f1a8674f4f8afa8d60bad69d2451).

Release receipt: unavailable. No matching v3.62.0 latency receipt was found in the local release or task artifact roots. Published archive digests and sizes above are from GitHub release metadata; the archives were not independently downloaded or rehashed for this report.

This report records the published 3.62 change descriptions. It is not a new live-host acceptance result. The original announcement draft separately owes a fresh zero-input Claude startup, an idle-worker self-reminder wake and the Slack path on an activated binding; this report does not claim those runs occurred. Later fixes and 3.63 work are outside this report.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

Source warnings:

- release receipts: green-to-published latency is unavailable under ~/.cas/artifacts/release/; pass --latency-receipt <run-dir>/release-latency.receipt for a standalone measurement
