Four of Cassy v3.63's seven changes make updates and builds safer; the other three improve sessions and Cloud sync.

AREA	CHANGES
Sessions	2
Releases	4
Slack and Cloud	1

7 changes shipped: 2 in Sessions, 4 in Releases and 1 in Slack and Cloud.

One dot, one shipped change. No GitHub issues were closed with this release.

▼ What shipped, by area

One dot is one change listed in the v3.63.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	2	Sessions start and messages stay readable; Factory reliability
Releases	4	`cas update` output you can read; `cas doctor` reports a missing Git hooks directory; Builds respect disk and leave an audit trail; CI
Slack and Cloud	1	Cloud sync keeps your data
Total	7	3 areas

Changes shipped

3 fixed, 3 changed, 1 added; tests and docs not counted

5m 50s

Green to published

Within budget (10m 0s budget); Merge-queue CI completion to publication

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.63.0 CHANGELOG section; tests and documentation entries are listed under the hood but not counted. A GitHub issue counts when release PR #1282 or the CHANGELOG section references it and it closed between the PR opening (5:43 PM ET) and 15 minutes after its merge (6:17 PM ET). Issues are closed

by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues were closed with this release. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

What you can do now

Sessions and messages

Sessions start without typing

WAS a new Codex or Claude session could sit idle.

NOW its first turn starts on its own.

Messages arrive whole

WAS a long message could arrive without its opening lines.

NOW the complete message arrives in one turn.

Quieter activity

WAS routine updates crowded the pane.

NOW short cards keep them compact, direct messages stay whole, and full text is available on request.

Inbox history keeps loading

WAS a failed reply-permission check could hide conversations.

NOW history keeps loading, with clear loading and unavailable states.

Updating

Clear update results

WAS messages from each step were mixed together.

NOW one line per step, short findings, and a plain final verdict.

Install prompts

WAS saying no looked like a failure.

NOW it says cancelled, and a failed install says how to retry.

Honest counts

WAS a problem with your personal settings counted as a failed project.

NOW projects and personal settings are counted separately.

Old settings cleaned up

WAS retired Cassy settings warned on every run.

NOW `cas update` removes them once and prints one short note.

Fewer repeat writes

WAS every update rewrote files that hadn't changed.

NOW unchanged files are left alone.

Blocked saves reported

WAS a refused save looked like a file conflict on a finished run.

NOW the run says it is incomplete and keeps your staged work.

Stuck Git lock explained

WAS a leftover Git lock file failed the update with a vague error.

NOW it names the file, its age and how to clear it.

Cloud sync

Your changes stay queued

WAS switching a project to team-only could drop changes the team copy hadn't confirmed.

NOW they stay until confirmed, and cleanup previews exactly what it removes.

Unsupported characters explained

WAS a note with an invisible null character failed to sync with no reason.

NOW the error says Cloud can't store it yet, keeps your text, and you retry once Cloud supports it.

Running tasks stay running

WAS syncing with teammates could flip a task you were working on back to Open.

NOW it stays in progress.

Checks and builds

Missing Git hooks spotted

WAS `cas doctor` stayed quiet when Git hooks pointed at a deleted folder.

NOW it names the folder and how to restore hooks, without changing your settings.

Builds watch the disk

WAS builds started on a nearly full disk.

NOW they wait for free space, and cleanup finds forgotten caches.

Mac file limits

WAS some edited Mac background settings got an invalid file limit after repair.

NOW the limit stays valid and keeps your higher values.

Under the hood

Sessions and messages

Startup wake

WAS queued startup briefs could leave new sessions idle.

NOW Codex and Claude start without input, retaining readiness and typing vetoes.

Pane input

WAS repeated offers could truncate long messages.

NOW busy parking, edge re-offer and bracketed paste preserve one complete turn.

Routine cards

WAS status and copied notices expanded into full messages.

NOW compact cards preserve explicit full reads and whole direct messages.

Inbox replay

WAS optional grants/me failures blocked history.

NOW replay continues with explicit read states, preserving revoked-access refusal.

Update

Renderer

WAS mixed output and blanket retry advice.

NOW phase lines, compact findings, reason-specific remedies and separate user-store counts.

Self-update

WAS download output hid results and declines read as failure.

NOW phase-line progress, cancellation and 80-column clause breaks.

Config retirement

WAS retired TOML keys warned each run.

NOW locked atomic retirement, one scoped maintenance receipt, read-only configs untouched.

Refresh cost

WAS identical hook settings and rules rewritten.

NOW bytes and mtime preserved, no-op writes skipped.

Refused commit

WAS commit-guard refusal read as a conflict.

NOW incomplete refresh, staged work kept.

index.lock

WAS generic skills-phase failure.

NOW path, age and busy/stale classification with a manual remedy, lock and index untouched.

Cloud

Team-only cleanup	**WAS** personal rows dropped on route change. **NOW** removed only with an exact durable team ACK receipt, `--purge-team-owned --dry-run` and `--ids`.
NUL payloads	**WAS** unexplained `invalid_json_nul`. **NOW** named upstream storage block, payload kept unchanged, `--retry-reason invalid_json_nul` only after Cloud supports lossless NUL; no drain.
Team pull	**WAS** live InProgress tasks downgraded to Open. **NOW** live execution ownership preserved.

Runtime

Session restart	**WAS** teardown stopped the replacement. **NOW** it affects only the old generation.
Stall alarms	**WAS** false unread-delivery warnings. **NOW** recorded lifecycle actions count as receipt evidence.
Merge alerts	**WAS** merged or unrelated deliveries triggered alerts. **NOW** fresh-target checks and local ownership filter them.
Remote merges	**WAS** a local worktree was required. **NOW** pushed branches merge with CI tied to the exact SHA.
Close gate	**WAS** reopened deliveries closed before integration. **NOW** target containment and independent QA are required.
Codex hooks check	**WAS** compared after the budget upgrade, reported "stale". **NOW** compares first, shows the real error.
Codex startup guidance	**WAS** unknown evidence treated as stale. **NOW** follows the active MCP state, names unknown evidence.
doctor hooksPath	**WAS** no finding for a missing `core.hooksPath`. **NOW** read-only warning and a trusted main-checkout installer.
Hub plist	**WAS** `NumberOfFiles` outside the dict, Hard below Soft. **NOW** inside the dict, Hard ≥ max(Soft, 8192).

Builds and CI

Admission	WAS lanes admitted at 93% disk, macOS load unknown. NOW disk reserve plus a macOS host-pressure probe.
GC	WAS unknown caches invisible, terminal warm targets kept. NOW caches inventoried, terminal targets released under pressure.
Build logs	WAS retries truncated logs. NOW logs append with UTC admission and release stamps.
Optional slim CI	WAS broad Rust on every development push. NOW an opt-in `CAS_LANE_SLIM` switch, default off, uses pre-push fast rows and exact-tip receipts.

Retrieved: 18 October 2026 · 12:11 AM ET.

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-17-v3.63.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.63.0; retrieved 18 October 2026 · 12:11 AM ET.

Each change is placed in a product area by the words in its title, then its text; a change that matches no area is listed under Other. Correct an area in the Change map table before rendering.

Release PR: https://github.com/Richards-LLC/cassy/pull/1282 (https://github.com/Richards-LLC/cassy/pull/1282) (merged 17 October 2026 · 6:02 PM ET).

Release-notes draft: `docs/release-notes/2026-10-17-v3.63.0-slack.md`.

CHANGELOG source: `CHANGELOG.md`.

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.63.0 (https://github.com/Richards-LLC/cassy/releases/tag/v3.63.0) (published 17 October 2026 · 6:07 PM ET; release commit 45174f76d962f1f42cd656e734cf5e2b26e347f7).

Release workflow: https://github.com/Richards-LLC/cassy/actions/runs/39073398642 (https://github.com/Richards-LLC/cassy/actions/runs/39073398642) (successful; both packaged archive audits passed). Fresh downloads of the Linux x86_64 and macOS ARM64 archives matched GitHub's SHA-256 metadata before their digests were added to this report and announcement.

Install path proof: https://github.com/Richards-LLC/cassy/actions/runs/39073777524 (https://github.com/Richards-LLC/cassy/actions/runs/39073777524) (clean Linux container and macOS Apple Silicon jobs passed; transcripts are included with this report). The test homes were not initialized as projects, so the doctor result covers only the expected missing-store state. The hosted macOS job did not exercise the manual consumer-Mac Gatekeeper/SIP checklist; that GUI path is outside this proof.

Publication timing: 350 seconds from merge-queue CI completion at 2026-10-17T22:01:48Z (https://github.com/Richards-LLC/cassy/actions/runs/39072285085 (https://github.com/Richards-LLC/cassy/actions/runs/39072285085)) to publication at 2026-10-17T22:07:38Z. This was within the recorded 600-second budget. The receipt contains no per-stage timings.

Publication latency receipt: release-latency.receipt, retained with this report package.
