Cassy v3.90.0

RELEASE REPORT · PUBLISHED 29 OCTOBER 2026 · 9:53 PM ET

A refreshed Commander that names the model, and cleanups that no longer stall messages.

AREA	CHANGES
Commander	5
Sessions	5
Tasks	5
Messages	1
Releases	3

19 changes shipped across 5 areas; Commander, Sessions and Tasks have 5 each.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one Added, Changed or Fixed entry in the v3.90.0 CHANGELOG. Dots count changes, not their size or importance. The one known limit stays in prose and does not count as shipped work.

AREA	CHANGES	WHAT CHANGED
Commander	5	Refreshed Accounts, left nav and header; Supervisor model and effort appear; Ended sessions can be dismissed; Ended project cards read correctly; Revoked sends offer Re-pair
Sessions	5	Shutdown no longer stalls messages; Dead-worker shutdown leaves the store free; Held cleanups complete; Idle daemons reclaim dead workers; Steadier tests and factory tooling
Tasks	5	Approved fast-row exceptions are honored; Forged exception approvals are refused; Close uses the corrected push; Older evidence ledgers still close; Proof checks are fast and use Git
Messages	1	Load earlier keeps your place
Releases	3	Park requires a titled changelog entry; Known limits stay out of shipped totals; Release gates accept empty post-cut sections and reject placeholders
Total	19	5 areas

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-10-29-v3.90.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.90.0; retrieved 29 October 2026 · 10:00 PM ET. Product-area assignments are editorial; the release and titles are preserved.

Changes shipped

3 added, 2 changed, 14 fixed; 1 known limit excluded

3h 39m 38s

Release commit to main

30-minute target; 3h 9m 38s over after two queue ejections

13m 49s

Main to published

20-minute target; 6m 11s under

13m 50s

Queue green to published

20-minute budget; 6m 10s under

Changes and GitHub issues are counted separately. One titled Added, Changed or Fixed entry is one change, including the Changed entry for steadier tests and factory tooling. The one known limit describes a remaining problem. Commander groups the refreshed look, model and effort, ended sessions and Re-pair; Sessions groups shutdown, cleanup and test steadiness; Tasks groups exceptions, close and proof checks; Messages and Releases hold the rest. Empty areas are omitted, and the generator's stable area order is retained. These editorial assignments replace keyword matching.

A GitHub issue counts when release PR #1426 or the CHANGELOG section references it and it closed between the PR opening (5:59 PM ET) and 15 minutes after its merge (9:54 PM ET). The generator counted zero issue closures; that count is unchanged, and there is no zero tile on page one. The publication receipt records no blocked stage and no manual intervention after main landed; it does not cover the queue before main. Not measured for this release: request to published, cut to published, per-stage times and lesson recurrence.

The release commit (5:59 PM ET) reached main at 9:39 PM ET, 3 hours 39 minutes later and far over the 30-minute target. The merge queue rejected the release twice, and each rejection took one repair cycle; the second was a flaky port-collision test, now fixed by waiting for each test server's own startup line. Publication then took 13 minutes 49 seconds from main, inside the 20-minute target. The prior release took 20 minutes 45 seconds to main and 20 minutes 13 seconds to publish. Those intervals have separate endpoints and do not measure the same stage.

02 / 06

What you can do now

A refreshed Commander

One consistent look

WAS

Accounts, the left nav and the conversation header used older, mismatched shapes.

NOW

One shape scale with shared card, pill and avatar rules, provider logos as avatars, and Accounts grouped by machine with Default and Recommended badges. It fits a phone.

See the model and effort

WAS

Commander could not say which model or effort a conversation was using.

NOW

The conversation header shows the reported model and effort, and an unreported effort is cleared rather than left stale.

Tidy ended sessions

WAS
Ended sessions stayed in the project list with no way to clear them.

NOW
Dismiss an ended session, or Clear ended on a project card. This applies to this device only; history stays available.

Ended cards read correctly

WAS
An ended session could show a stopped count of zero and still count as live.

NOW
The stopped count appears only when something stopped, and ended sessions no longer count as live.

Load earlier keeps your place

WAS
Loading earlier history could drop you far below where you were reading.

NOW
Your reading position is kept.

Revoked access offers Re-pair

WAS
Revoking a device's access during a send could offer Take control.

NOW
Commander offers Re-pair, or re-pairing with Send messages.

A team that keeps moving

Shutdowns no longer stall messages

WAS
Cleaning up a finished session could hold up message delivery for over an hour.

NOW
Cleanup runs in the background, warns once if it is slow, and finishes on the next start if interrupted.

Disk space comes back

WAS
Finished sessions' files could pile up when the team was idle.

NOW
An idle team reclaims them on its regular check.

Smoother delivery

Corrected work closes

WAS
After a refused push was fixed, completion could read the old version.

NOW
Completion uses the corrected push.

Faster proof checks

WAS
Proof checks could take several seconds per file and sometimes hang.

NOW
One combined search brings them back under a second.

Every change gets a changelog line

WAS
Release notes could miss most of a release's changes.

NOW
Product changes need a titled changelog entry before they are handed in.

03 / 06

Under the hood

Commander

Design-system refresh

WAS
Accounts, nav and header each used their own shapes and radii.

NOW
One shape scale with shared card, pill and avatar rules in DESIGN.md; provider marks as avatars; Accounts grouped by machine.

Model and effort in status

WAS
The session catalog had no reported model or effort.

NOW
Panes record both in the catalog and status; the model chooser no longer treats old history as confirmation after a failed selection.

Refused sends keep their cause

WAS
A revoked pairing during a pending send surfaced as a generic control conflict.

NOW
The hub keeps the pairing or message-permission cause, so Commander offers Re-pair.

Factory daemon

Cleanup off the control loop

WAS
Worktree cleanup and target retirement ran on the daemon control loop, stalling delivery for over an hour.

NOW
Cleanup is queued off-loop, a long cleanup warns once, and exit waits a bounded time and saves unfinished work for the next start.

Dead-worker shutdown frees the store

WAS

Retiring a dead worker's target ran inline on the store write lane without reserving its name.

NOW

Retirement runs off that lane and the name stays reserved until cleanup finishes.

Held and idle cleanups complete

WAS

Held retirements replayed on every start, and staged cleanups ran only when a spawn or another cleanup was pending.

NOW

Held retirements complete their record, and an idle daemon adopts staged cleanups on every tick with idempotent staging.

Delivery gates

Changelog gate

WAS

Nothing required a CHANGELOG entry, so [Unreleased] held 3 entries for about 30 merges.

NOW

Park requires a titled [Unreleased] entry or a reasoned note for product-source deliveries, only in repos with a CHANGELOG; the fast row validates existing entries, passes on an empty post-cut section and refuses template placeholders.

Approved exceptions honored

WAS

Push and park ignored an approved, logged fast-row exception.

NOW

Both accept an authenticated exception whose approval covers the delivery's scope.

Exception approvals checked

WAS

Park trusted fast-row exception files without checking the approver.

NOW

The approver must be a live registered supervisor with a complete approved scope.

Proof-surface checker

WAS

One ripgrep per symbol, up to 7 s per file, and a possible hang on a bundled ripgrep.

NOW

One alternation `git grep` with color off, about 0.3 s per file, and committed surfaces resolved through Git.

Close uses the corrected push

WAS

Close could read a stale delivery tip after a refused push.

NOW

Close honors the explicitly pushed tip, and older evidence ledgers close through a covering review.

Tests and tooling

Steadier tests

WAS

Tests depended on timing, entropy, shared environment and elapsed waits.

NOW

Deterministic clocks, collision-free fixture identities, one guard for environment and stores, observed async fixtures, exclusive port and socket ownership, and a real-hub /exit journey.

Known limits

Fast-row receipts are still local

WAS

Park trusts PASS receipts that any local process can write.

NOW

Still true in this release; moving that trust to CI is in progress.

Release commit: `65e3016e1` (`release: v3.90.0`), committed 29 October 2026 · 5:59:40 PM ET.

Pipeline latency

The standalone timing command was `scripts/release-latency-receipt.sh v3.90.0 --budget-seconds 1200 --run-dir <task-proof>/latency`. Its receipt names the endpoint as merge-queue green (run 40985692756) at 9:39:17 PM ET, one second before main landed at 9:39:18 PM ET. Publication at 9:53:07 PM ET yields 830 seconds (13m 50s) inside its 1,200-second budget. The distinct main-to-published interval is 829 seconds (13m 49s). Release commit to main, 13,178 seconds (3h 39m 38s), is measured from the release commit's committer time to main landing. Stage timings are unavailable: the latency receipt records no per-stage seconds. Neither value is substituted for the other.

No source warnings.
