Cassy v3.95.0 RELEASE REPORT · PUBLISHED 31 OCTOBER 2026 · 11:18 PM ET

Anything not clearly approved now stays unapproved, even on the older release running beside it.

AREA	CHANGES
Tasks	4

4 changes shipped, all in Tasks: every one is about what a task must show before it can close.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Changes shipped

4 fixed; tests, docs and known limits not counted

1h 16m 18s

Release PR open to merged

PR #1449 opened 9:58 PM ET, merged 11:14 PM ET; one queue ejection, repaired in one cycle

4m 5s

Main to published

20-minute target; 15m 55s under

4m 36s

Queue green to published

10-minute budget on the receipt; 5m 24s under

39,852 → 5

Ambient recall

Times injected → times used, all recorded history; measured noise

5,761 → 0

Session context

Times injected → times opened, all recorded history; measured noise

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.95.0 CHANGELOG section. Areas are assigned editorially: the generator's keyword match put supervisor questions under Sessions, but they decide whether a task can close, so they sit in Tasks with the other three. A GitHub issue counts when release PR #1449 or the CHANGELOG section references it and it closed between the PR opening (9:58 PM ET) and 15 minutes after its merge (11:29 PM ET); none did. Not measured for this release: request to published, cut to published, per-stage times and lesson recurrence.

The release PR opened at 9:58 PM ET and merged at 11:14 PM ET, 76 minutes later, after one queue ejection. The first queue run failed at 10:19 PM ET on exactly one test: the verifier agent file was 15,037 bytes, 37 over its 15 KB budget. One repair commit at 10:23 PM ET moved procedure text into a reference, and the release re-entered the queue at 10:57 PM ET and went green at 11:13 PM ET; about 38 minutes sat between the ejection and the second entry. This same budget also ejected v3.94.0. Publication then took 4 minutes 5 seconds from main, against 16 minutes 14 seconds for v3.94.0, whose PR took 2 hours 1 minute 22 seconds.

Publication itself raised no blocker and needed no manual step; the release did need that repair and a rerun of the release script before it. The friction ledger's own row for this release reads 0 queue ejections and is wrong: it has never recorded one, including v3.94.0's. GitHub's run history is the count used here.

02 / 06

What you can do now

Reviews you can trust

Unclear reviews never count as approval

WAS

A review record that was incomplete, or written by a newer Cassy, could be read as approved and let work close without a real review.

NOW

Anything that is not clearly approved is treated as not approved, so work waits for a real review. Tested with the published programs: on a database 3.95.0 wrote, the published 3.94.0 kept two unreviewed tasks open and closed only the one that got a real approval.

Questions stay open

WAS

When a reviewer needed a decision, it had to fail the review and start over.

NOW

The reviewer asks, the answer goes on the same review, and nothing is redone.

Honest review counts

WAS

Reviews that had only been requested showed up as errors, so the numbers looked far worse than they were: 39 of 42 "errors" in one 22-hour stretch.

NOW

They show as waiting until a verdict arrives.

Measuring what helps

First numbers on which features earn their place

WAS

The ledger could hold feature ratings, but its report for v3.94.0 read "none recorded".

NOW

This is the first report with them. Automatic memory cards, already removed in v3.94.0, were added 39,852 times and used 5. The context added when a session starts was added 5,761 times and opened 0 times; it still ships, and this release does not change it.

03 / 06

Under the hood

Verification

Fail-closed status

WAS

3.94.0 mapped unknown stored statuses to Approved (`from_str(...).unwrap_or_default()`, default Approved), and synced JSON with no status defaulted to Approved.

NOW

Unknown and missing statuses parse as Error everywhere, so close refuses them.

Mixed-version safety

WAS

New statuses would read as Approved on older binaries sharing a store during rollout. Against raw `pending` and `supervisor_call` rows, released 3.94.0 listed both as approved.

NOW

`pending` and `supervisor_call` are stored as `error` plus a `status_detail` column that older binaries ignore. Published 3.94.0 (f862f92) read a store written by published 3.95.0 (4d893d0): all 4 rows list and show as error, the 2 unresolved tasks refuse close, and the approved control closes.

Supervisor-call verdict

WAS

A reviewer question resolved its dispatch as error and forced a re-dispatch.

NOW

`supervisor_call` keeps the dispatch open for one answer; final verdicts stay single-use.

Pending dispatches

WAS

Dispatch-request placeholder rows were counted as error verdicts (39 of 42 "errors", 30 October 5:00 PM ET to 31 October 3:33 PM ET).

NOW

They are `pending` and excluded from verdict and ledger counts. Ledger events already written stay as they are.

Feature feedback

First measured verdicts in the ledger

WAS

`cas ledger report --release v3.94.0` printed "none recorded" under Feature feedback.

NOW

`cas ledger report --release v3.95.0` prints `ambient_recall` measured noise (39,852 injected, 1,095 opened, 5 used) and `session_context` measured noise (5,761 injected, 0 opened, 0 used). Noise means under 1% used across at least 20 injections. These are lifetime totals from the 8:22 PM ET backfill plus one 6-injection session, not this release's window.

Removed

Last Jev residue

WAS

A config shim still warned about and rewrote `[jev]` sections.

NOW

Removed; old configs with `[jev]` still load silently. Its CHANGELOG entry is filed under 3.94.0, but the code left in 3.95.0.

Evidence and scope

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-01-v3.95.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.95.0; retrieved 31 October 2026 · 11:20 PM ET.

Release PR: https://github.com/Richards-LLC/cassy/pull/1449 `(https://github.com/Richards-LLC/cassy/pull/1449)` (opened 31 October 2026 · 9:58:08 PM ET, merged 11:14:26 PM ET; merge commit 4d893d0c53bd333b3640dda0836ce2bdfcea4e8e).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.95.0 `(https://github.com/Richards-LLC/cassy/releases/tag/v3.95.0)` (published 31 October 2026 · 11:18:31 PM ET; tag object d69b1045b4fa43a9ef341164a723b7c2c227fb0c on commit 4d893d0; Release run 41268369800).

Release commit: `972729860` (`release: v3.95.0`), committed 31 October 2026 · 9:58:05 PM ET.

Merge queue: first run CI 41263385826 (10:00:32 to 10:19:08 PM ET) failed in Fast Validation suite shard 2 on one test, `verifier_mirrors_document_the_current_close_contract`; shards 1 and 3 passed 4,571 and 4,534 tests. Repair commit `6a6c6e369` (10:23 PM ET) left the Claude agent file at 14,208 bytes and the Codex one at 14,491, each at least 500 under budget. Second run CI 41267209814 (10:57:02 to 11:13:55 PM ET) passed.

Rollout proof: run for this report at 11:24 PM ET with the published assets, in an isolated home and on an SQLite backup. The published 3.95.0 wrote three real close-dispatch markers and one supervisor-call verdict; the published 3.94.0 (digest `sha256:d6d8905d00431fc3c294122359dee1b47c87c36e45ae276b0beac1b1ed36948f`, as published) then listed, showed and tried to close them. The result matches the delivery's earlier run against the candidate at e7f0831. No live store was read or changed.

Ledger: `cas ledger report --release v3.95.0`, 6 events from 8:19 PM ET to 11:18 PM ET, including 2 verifier checks recorded as could not run. Its 0 ejections reflect that this store has never recorded a queue check; a fix is filed.

Release QA: no batch QA round is on record for this candidate. Each delivery carried its own failing-first test, named test receipts and an approved verdict, and the merge queue ran the full suite on the final tree. Automated tests cover the missing-status refusal end to end; live Cloud sync was not walked. Captures are command output, not screenshots, so this report quotes them above and shows no image pairs.

Pipeline latency

Merge-queue green (CI run 41267209814) at 11:13:55 PM ET to publication at 11:18:31 PM ET is 276 seconds (4m 36s), inside the receipt's 600-second budget. Main landed at 11:14:26 PM ET, so main to published is 245 seconds (4m 5s). Release PR #1449 opened at 9:58:08 PM ET and merged at 11:14:26 PM ET: 4,578 seconds (1h 16m 18s), including one queue ejection. The receipt records zero interventions, no blockers and no per-stage seconds, so stage timings are unavailable. Neither value stands in for another. Receipt, relative to `~/.cas/artifacts`: `release/v3.95.0-latency/release-latency.receipt`.

No source warnings.
