cas-src v3.100.0 RELEASE REPORT · PUBLISHED 3 NOVEMBER 2026 · 12:31 AM ET

Cassy recognizes ongoing work and avoids needless interruptions.

AREA	CHANGES
Sessions	5
Tasks	1
Releases	6

12 changes shipped across 3 areas; Releases has the most, 6.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v3.100.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Sessions	5	Detect owned background jobs on macOS; Remove unused runtime scaffolding; Count live background work before sending idle alerts; Keep idle Codex workers visible; Keep shutdown terminal after late stale events
Tasks	1	Batch proof discovery and persist cleanup readiness
Releases	6	`cas-test-audit` skill; Probe installed Bubblewrap before choosing it; Hosted queue archives can reuse main-scoped dependencies; Surface uncancellable queued runs; Save only completed archive priming; Report queued ghosts without repeated failures
Total	12	3 areas

Changes shipped

10 fixed, 1 changed, 1 added; tests, docs and known limits not counted

4m 11s

Green to published

Within budget (10m 0s budget); Merge-queue CI completion to publication

72m 3s

PR opened to installed

GitHub release timer: 11:20:39 PM ET to soundwave at 12:32:42 AM ET; displayed there as 73 min rounded up

Changes and GitHub issues are counted separately. A change is one titled entry in the v3.100.0 CHANGELOG section; entries under Test, Doc or Known limits headings are listed under the hood but not counted. A GitHub issue counts when release PR #1462 or the CHANGELOG section references it and it closed between the PR opening (11:20 PM ET) and 15 minutes after its merge (12:42 AM ET). Issues are closed by hand shortly after the merge, so a report run inside that window waits for referenced issues that are still open. No GitHub issues are counted in this report's fixes ledger. No release stage was blocked. No manual interventions. Not measured for this release: request to published, cut to published, lesson recurrence.

02 / 06

What you can do now

Release changes

Work in progress

WAS

background tasks could look inactive, including on Mac.

NOW

Cassy recognizes work that is still running and waits before sending an idle alert.

Reliable stopped state

WAS

late crash information could make a stopped session look merely inactive.

NOW

stopped sessions stay stopped, so recovery starts from the correct state.

Moving on sooner

WAS

repeated checks and duplicate cleanup could slow the move to the next task.

NOW

cleanup remembers when it is ready and avoids repeating work while protecting unpublished changes.

03 / 06

Under the hood

Running work

macOS process evidence

WAS

child-process evidence was unavailable on Mac.

NOW

native discovery reports owned descendants and their ages, excludes persistent MCP sidecars and keeps missing evidence explicit.

Idle alerts

WAS
live background work could still trigger an idle delivery alert.

NOW
an owned live child suppresses the alert until it finishes, alongside the existing locks and reminder rules.

Terminal retirement

WAS
a delayed pane-exit observation could change shutdown into stale.

NOW
shutdown remains terminal after late observations.

Cleanup readiness

WAS
adoption reopened the agent store each tick and shared checkouts could get duplicate intents.

NOW
readiness persists on disk, staging groups by checkout and partial retries preserve frozen task facts.

Checks and CI

Bounded proof searches

WAS
changed paths and public symbols caused repeated integration-test scans.

NOW
source paths share Git searches in bounded batches, and builtin literals share one search without losing consumer coverage.

Queued-run watchdog

WAS
a sweep could report success even when cancellation requests failed.

NOW
rejected requests are checked again, and queued or unreadable runs keep the sweep red while completion races remain safe.

Sandbox availability

WAS
finding Bubblewrap selected isolation even when the host could not create a sandbox.

NOW
capability probing selects the existing fallback with a warning, while required isolation still fails closed.

Dependency cache reuse

WAS
hosted queue archive builds could lack a compatible dependency cache.

NOW
a cache miss can request advisory priming from main after archive reuse, without adding a required check or saving queue-ref copies.

Test review

Read-only test audit

WAS

test-value and CI-cost reviews lacked a shared procedure.

NOW

the test audit skill supplies five review buckets, detector precision checks and runner timing recipes, with approval required before cuts.

Remove dead scaffolding

WAS

tests exercised unused routing overrides, parsing, validation, silence intent and report helpers.

NOW

those unused paths are removed, while live owner-session routing, relay completion and component reporting retain their coverage.

Accurate capacity coverage

WAS

a limits test name implied account-picker coverage it no longer provided.

NOW

the test names limits rendering, and the journey check names the actual account-choice test separately.

Evidence and scope

Source: CHANGELOG `CHANGELOG.md`, release-notes draft `docs/release-notes/2026-11-03-v3.100.0-slack.md`, GitHub `Richards-LLC/cassy` release v3.100.0; retrieved 3 November 2026 · 12:34 AM ET.

Areas were set by hand: four changes the generator left under Other are filed under Sessions (1) and Releases (3).

Release PR: https://github.com/Richards-LLC/cassy/pull/1462 `(https://github.com/Richards-LLC/cassy/pull/1462)` (merged 3 November 2026 · 12:27 AM ET).

GitHub release: https://github.com/Richards-LLC/cassy/releases/tag/v3.100.0 `(https://github.com/Richards-LLC/cassy/releases/tag/v3.100.0)` (published 3 November 2026 · 12:31 AM ET).

Release receipt (relative to `~/.cas/artifacts`): `cassy-bbb8e75581403d3edc2689512df64eaf37780d70a032cb0d79850218dfada14a/cas-bc1d/run/release-latency.receipt`.

Pipeline latency

MEASURE	VALUE
Release PR opened → merged (11:20 PM ET → 12:27 AM ET)	67 min
Merge-queue ejections (a flagged word in a new skill document; a two-line wording repair re-entered the queue)	1
Final merge-queue CI run, cold dependency cache (12:08 AM ET → 12:27 AM ET)	18.6 min
Merge-queue green → published, within the 600 s budget (12:27:22 AM ET → 12:31:33 AM ET)	251 s
Published → installed on soundwave (12:31:33 AM ET → 12:32:42 AM ET)	69 s

The archive cache warmer first runs on this release's main push, so the 18.6-minute queue run predates it. Queue-time savings from the warmer are projected, not measured; the next release's queue run is the first measurement.

Per-stage timings are unavailable: the latency receipt records no STAGE_SECS.

No source warnings.
