Cassy v4.11.0 RELEASE REPORT · PUBLISHED 9 NOVEMBER 2026 · 11:08 PM ET

Shipped work closes on its own, and Commander shows when history fails to load.

AREA		CHANGES
Commander	●●	2
Sessions	●	1
Tasks	●●●	3
Messages	●●	2
Releases	●●	2

10 changes listed across 5 areas; Tasks has the most, 3.

One dot, one shipped change. No GitHub issues are counted in this report's fixes ledger.

Release at a glance

▼ What shipped, by area

One dot is one change listed in the v4.11.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Commander	2	Recover missing conversation history; History retries survive late replies
Sessions	1	Inspectable Claude boot refusals
Tasks	3	Released deliveries close without metadata overrides; Close published peer approvals; Parallel QA registry merges
Messages	2	Undelivered decisions stay visible; Published peer landings wake the receiving supervisor
Releases	2	Lift a release freeze with your existing pairing; Publish from factory worktrees
Total	10	5 areas

10

Changes listed

10 fixed; tests, docs, known limits and upgrade notes not counted

5m 21s

Green to published

Queue CI completion to publication; within the 20m budget

5m 13s

Main to published

Main landing to publication; within the 20m budget

6h 55m 11s

First commit to main

24,911 s against 1,800 s; exceeded the 30m target

1

Queue runs

Run 42751634289

> Changes count titled CHANGELOG entries; tests and docs are excluded. The generated GitHub ledger counts zero issues: a referenced issue must close between PR #1737 opening (10:45 PM ET) and 15 minutes after merge (11:18 PM ET). No release stage was blocked and no manual intervention was recorded. Request, cut and stage timings are unavailable.

02 / 06

What you can do now

Fewer manual steps, fewer silent gaps

Releases close themselves

WAS

after a release, each shipped task had to be closed by hand because changelog and map files had moved.

NOW

closing follows the release history, so shipped work closes without overrides.

You can lift a release freeze

WAS

Lift freeze asked for an unrelated fleet-control permission, and turning it on didn't help.

NOW

your normal pairing can freeze or lift a release from the release card.

Missing history shows up

WAS

when Commander asked for a conversation's history and got no answer, the gap stayed silent.

NOW

after 15 seconds you see an error with a Retry button, for each page separately.

Undelivered decisions are noticed

WAS

a decision meant for you could expire without anyone knowing it never reached a device.

NOW

Cassy notices the miss, and delivery keeps retrying.

Approvals from your other machine are acted on

WAS

a landing approval from your other machine could sit quietly for a while.

NOW

it's picked up right away.

Parallel fixes merge cleanly

WAS

two fixes that each added a QA entry collided and had to be redone.

NOW

separate entries merge on their own; edits to the same entry still ask for a person.

Easier debugging and publishing

WAS

a helper that failed to start vanished without a trace, and reports inside a helper's folder could not be published.

NOW

failed starts keep their boot output, and those reports publish directly with secrets still protected.

03 / 06

Under the hood

Release changes

Release close

WAS

closes after a release hit DELIVERY CONTENT DROPPED for `changelog.d/<id>.md` and CODEMAP lines rewritten during integration.

NOW

close follows the full history to the promoting release commit and the final regenerated blob, with no reviewed-drop override.

Peer approvals

WAS

an admitted peer premerge approval was refused after later plan bookkeeping changed the digest, and published landing approvals were treated as quiet receipts.

NOW

the approval survives when task, delivery SHA, target and landed tree still match, and published landings wake idle supervisors.

Release freeze scope

WAS

`lift_train_freeze` required factory-operate, which the pairing toggle could not grant.

NOW

freeze and lift use machine-read pairing scope; revoked and preview credentials still cannot lift.

Commander history

WAS

an unanswered history request left a silent partial transcript, and one late reply could clear another page's timeout.

NOW

each request tracks its own 15-second deadline, error and Retry; older-page cursors retry independently.

Operator delivery

WAS

an expiring transcript mirror copy with no receiving device produced no signal.

NOW

the current supervisor is notified, including decisions carried in status replies; durable delivery keeps retrying.

Merging and publishing

WAS

the QA journey registry conflicted on every pair of additive deliveries, and `artifact publish` refused files in registered worktrees under `.cas`.

NOW

a registered merge driver unions disjoint bug families and keeps the newer date, and nested registered checkouts publish while Git internals, sockets and credentials stay refused.

Boot diagnostics

WAS

a missing SessionStart canary lost the startup output with the pane.

NOW

bounded, redacted boot output is retained and findable by worker or spawn request.

Full GitHub asset SHA-256 digests and sizes are above.

Review: art-176128f3 found one issue; fixed and re-reviewed in art-7e195594. Batch ledger art-710cbcab: 7 PASS, 0 FAIL, 4 NOT EXERCISED. Unexercised checks are not passing coverage. No captured before/after pair is included.

Pipeline latency

Stage timings are unavailable: the latency receipt records no STAGE_SECS.

Measured endpoints: queue green 11:03:01 PM ET → publication 11:08:22 PM ET, 321 s; main landing 11:03:09 PM ET → publication, 313 s. Both meet 1,200 s budgets. First child → main: 24,911 s / 1,800 s, missing the 30-minute target by 23,111 s. One queue run (https://github.com/Richards-LLC/cassy/actions/runs/42751634289). Tag-to-publication is not measured separately.
