Eighteen named changes make safer recovery, cleanup and access part of daily work.

18 named changes shipped across three product areas. Sessions has the most, with eight.

One dot, one shipped change. No GitHub issues were closed with this release.

▼ What shipped, by area

One dot is one bold-titled change in the v3.66.0 CHANGELOG. Dots count changes, not their size or importance.

AREA	CHANGES	WHAT CHANGED
Commander	5	Credential boundaries; Bounded cleanup reports; Assembly proof selection; Fixture isolation; Readable Violet posts
Sessions	8	Violet reconnects; Rebased deliveries; Stalled project checks; Project refreshes; Idle-session wakeups; Repeated idle alerts; Actionable next steps; Clearer provisioning errors
Tasks	5	Neon workspace setup; Alternate Codex accounts; Codex model checks; Safe retention preview; Team queue recovery
Total	18	3 areas

Changes shipped

Bold-titled entries in the v3.66.0 CHANGELOG; tests and documentation are not counted

17m 12s

Green to published

Successful merge-queue CI completion to release publication; over the 10m budget

A GitHub issue is counted only when the release PR or CHANGELOG names it and it closed between PR opening at 9:57:19 AM CT and 15 minutes after merge at 10:31:26 AM CT. None of the referenced issues closed in that window, so no zero issue row is shown. Six related issues were closed later during post-publication reconciliation and are documented in Evidence and scope; those later closures are not included in the issue count. Four open reports retain specific follow-up work. No manual interventions were recorded. Request-to-published and cut-to-published timings are unavailable.

What you can do now

Setup and access

Neon setup

WAS initialization checked only root-level packages and needed an interactive choice.

NOW it finds supported nested workspaces and accepts organization and project IDs directly.

Saved credentials

WAS automated commands could reach saved Neon or Vercel credentials.

NOW those reads and Neon CLI/tool access are blocked by default.

Clear setup errors

WAS a failed worker setup could hide where it stopped.

NOW the error names the project and launch step.

Codex setup

Alternate accounts

WAS an alternate account in your home folder could fail to start.

NOW Cassy expands the home-folder shortcut before setup and names missing hook setup.

Codex models

WAS an older app could hide a model your account supports.

NOW that stale list alone cannot stop the model from starting.

Keeping work moving

Team queue recovery

WAS a linked project could hide queued personal changes.

NOW preview a clear list before moving eligible changes to the team.

Brief Slack outages

WAS a short reconnect could interrupt a protected action.

NOW Cassy retries briefly and explains a persistent outage.

Branch updates

WAS unchanged work could stall after a branch update.

NOW it continues after Cassy confirms nothing changed.

Stalled projects

WAS one unresponsive project could hold up refresh or close.

NOW its check returns a cause quickly while healthy projects continue.

Maintenance and reminders

Cleanup preview

WAS old task evidence and task-created simulators could accumulate.

NOW eligible items are previewed, ownership is checked, and removal needs confirmation.

Compact cleanup report

WAS a cleanup report could overwhelm the reply.

NOW counts and samples come first, with complete details available in bounded pages.

Idle recovery

WAS missed prompts or no selected project could leave ready work unseen.

NOW alerts retry until delivered and the next available task is surfaced.

Proof selection

WAS an unsupported check could be skipped while appearing successful.

NOW the command stops and lists supported choices.

Readable posts

Violet formatting

WAS a post with unsupported times or unattached references could slip through.

NOW it is refused with clear fixes, and references must be attached.

Under the hood

03 / 06

Setup and access

Neon workspace setup

WAS discovery checked only root packages, and multi-organization setup required a prompt.

NOW bounded scans find supported workspace packages; explicit organization and project flags support noninteractive setup.

Alternate Codex accounts

WAS a home-relative account directory reached trust preparation literally and failed with an empty parse error.

NOW the home shortcut expands first, and missing hook setup gets a specific error.

Codex model checks

WAS an older or unversioned client catalogue could make supported models look unavailable.

NOW those catalogues are unverified and cannot falsely refuse a model.

Safe retention preview

WAS closed-task artifacts and task-created simulators could persist without ownership checks.

NOW pruning plans by age, size and keep reason; simulator ownership is project-bound, and apply requires confirmation.

Team queue recovery

WAS a team-linked project could hold personal-scope backlog without a safe recovery path.

NOW status and preflight expose the mismatch, and a plan-first migration queues only eligible rows with itemized acknowledgments.

Recovery and coordination

Violet reconnects

WAS a brief proxy reconnect could fail a claim, and each read could restart its Cloud budget.

NOW retry detection is structural, reads share a bounded budget, and a covering lease prevents concurrent pickup.

Rebased deliveries

WAS an unchanged delivery rebased onto a new target could keep a stale parked anchor.

NOW the anchor rebinds only after patch identity and task ownership are proven; changed content still refuses.

Stalled project checks

WAS one unavailable repository configuration could hold up close or merge while unrelated roots were inspected.

NOW probes are bounded and shared per root; healthy project identities stay fresh.

Project refreshes

WAS one stalled known-root configuration could delay every project refresh.

NOW observations are bounded independently so healthy roots still refresh.

Idle-session wakeups

WAS replayed Claude tool events could look unfinished and suppress a completion or recovery wake.

NOW only actual turn records hold the wake gate open.

Repeated idle alerts

WAS an alert could be marked before delivery, while older expired-review relays starved newer ones.

NOW unanswered pages repeat until delivered, and already-sent relays no longer starve the sweep.

Actionable next steps	WAS blocked tasks, a missing focus or stale reminders could hide ready work or the lack of a wake source. NOW eligible suggestions respect peer ownership, and stop warnings identify a missing wake source.
Clearer provisioning errors	WAS failed worker launches could omit project and spawn context. NOW failures name the worker, project and launch step.

Reports and proof

Credential boundaries	WAS default policy omitted Neon tools, and delegated commands could reach saved Neon or Vercel credentials. NOW Neon CLI/MCP access is denied by default, `NEON_API_KEY` stays out of delegated environments, and credential-store reads are blocked across command and script inputs.
Bounded cleanup reports	WAS a cleanup report returned hundreds of thousands of characters. NOW the default summarizes counts, sizes and samples, preserves machine-readable status lines, and bounds detail pages by bytes and lines.
Assembly proof selection	WAS an unsupported row name could be ignored while the command reported success. NOW invalid names fail before proof work begins and list the supported rows.
Fixture isolation	WAS a Codex trust test could dirty its checkout, and a provisioner dispatch test lacked its CLI companion. NOW launch evidence is isolated and dispatch uses the built CLI fixture; strict reminder checks also hold under load.
Readable Violet posts	WAS dense messages could cite unavailable items or use unsupported time zones, and the CLI hid formatting violations. NOW shared rules require attached references and CT times; the hub rejects unreadable posts with actionable fixes.

Fixes ledger

04 / 06

No GitHub issues closed within the release's counting window. The six related fixes closed after the cutoff during post-publication reconciliation; they are documented in Evidence and scope and are not included in the issue count.

ISSUE	TITLE	CLOSED	AREA

Remaining references: #1294's repository probe is now bounded, but the separate Claude authentication and daemon-log symptoms still need evidence. #1296 awaits native macOS simulator proof. #1297 awaits operator review and application of its migration preview plus queue-health verification. #1300's managed-thread file reply support did not ship in v3.66.0.

Evidence and scope

06 / 06

Release PR #1311 (https://github.com/Richards-LLC/cassy/pull/1311) opened at 9:57:19 AM CT. Merge-queue CI run 39444167181 (https://github.com/Richards-LLC/cassy/actions/runs/39444167181) succeeded at 10:16:16 AM CT, and the PR merged at 10:16:26 AM CT to `d6014e1d80415984a5114598610fb144e9be38ee`.

Release workflow run 39446894689 (https://github.com/Richards-LLC/cassy/actions/runs/39446894689) published the tag at 10:33:28 AM CT. The 1,032-second green-to-published interval exceeded the 600-second budget; the receipt recorded zero manual interventions. Soundwave installed at 10:34:02 AM CT. Hosted Linux and macOS Apple Silicon install-path proof run 39449518032 (https://github.com/Richards-LLC/cassy/actions/runs/39449518032) passed. The manual consumer-Mac Gatekeeper/SIP GUI checklist was not run.

The report query covered issue references in PR #1311 and the v3.66.0 CHANGELOG, with the closure window from PR opening through 15 minutes after merge. GitHub issue states were rechecked on 20 October 2026 at 10:47 AM CT. The report renderer preserved this manually curated source and used its header-only fixes ledger for a zero counted issue total.

Post-publication reconciliation closed #1291 (https://github.com/Richards-LLC/cassy/issues/1291) at 10:45:16 AM CT, #1292 (https://github.com/Richards-LLC/cassy/issues/1292) at 10:45:24 AM CT, #1293 (https://github.com/Richards-LLC/cassy/issues/1293) at 10:45:31 AM CT, #1295 (https://github.com/Richards-LLC/cassy/issues/1295) at 10:45:38 AM CT, #1298 (https://github.com/Richards-LLC/cassy/issues/1298) at 10:45:45 AM CT, and #1302 (https://github.com/Richards-LLC/cassy/issues/1302) at 10:45:54 AM CT. These closed after 10:31:26 AM CT and are excluded from the report's counted issue total. #1294 (https://github.com/Richards-LLC/cassy/issues/1294), #1296 (https://github.com/Richards-LLC/cassy/issues/1296), #1297 (https://github.com/Richards-LLC/cassy/issues/1297), and #1300 (https://github.com/Richards-LLC/cassy/issues/1300) remain open with the stated follow-up work.
